20755. That is how they were reduced in number?—I do not think many did that, as there were only about three columns there, and later on the mares were not worth much, as they lost condition rapidly. I have no doubt the Boers helped themselves too. I only quote that as an example of many instances of stock being thrown away. I know that one brought in 11,000 head of stock one day, and it would vanish down to 7,000 or 8,000, and by the time the selling began, with fictitious bargaining the public got short profits out of it. I give that example of the 6,000 horses at Burgersdorp as a concrete example of what was going on in greater or less degree at various places, not through the officers wishing to do injustice, but from

Major
The Lord
Lovat, C.B.,
D.S.O.
24 Mar. 1903.

there being too much work for an insufficient number and little system or co-ordination.

20756. (Chairman.) Is there any other case?—Those are the four headings in different lines of waste of money: 1. Transport. 2. Equipment. 3. Pay. 4. Lack of co-ordination of departments.

20757. Is there any other point you wish to mention?—No.

20758. (Sir John Hopkins.) With regard to the telescopes, were they the regular stalker telescopes that were supplied latterly?—Yes; we had a grant of telescopes given us by the Government for the second contingent, and the remainder of the telescopes I bought myself. The Government telescopes were quite useless; one was a one-draw telescope, which was so weak in power that it was really not very much better than a Zeiss. I do not know what number of magnitude it was, but it was very much worse than the worst ghillie's glass, and the other one when standing up was about 5ft. long, and no man could carry it about. The War Office did help us by giving us telescopes.

20759. What would a good stalker telescope cost?—I should say you could get for £5 a very fairly good glass, what they call a keeper's glass or ghillie's glass, but we had to pay a good deal more at the time, because there was a great rush for telescopes, and we could not even get a great many firms to offer for them.

20760. They are those that pull out in sections?—Three draws.

20761. (Lord Strathcona and Mount Royal.) Had your men to pay for any portion of the clothing or other necessaries supplied while they were on service?—No.

20762. It was all supplied by the Government?—I take it you do not mean the original grant which was given to the men to begin with. The Yeomanry and Irregular corps at the beginning were given a grant by Government for their horses, and for the men's clothing, and these grants, of course, did not cover what the officers expended in equipping them, but they went in a very great measure towards doing so. After the initial expense of buying the horses and fitting out the corps, the men of my corps had no further expense.

20763. We have been told, I think, by an officer of one of the Highland regiments—a Regular regiment—that his men had to pay for a good many other things, and, among others, for boots or shoes supplied?—Yes, I know the Seaforths had to pay for hose-tops.

Mr.
J. B. Atkins.

20775. (Chairman.) You went out to South Africa for the "Manchester Guardian," in October, 1899?—Yes.

20776. And you were in Natal?—I was in Natal up to the relief of Ladysmith.

20777. And then you went from Bloemfontein to Pretoria?—Yes, with Lord Roberts, with a slight deviation with General Ian Hamilton, to Lindley.

20778. And after that?—After that I returned to England.

20779. You have also had some experience of other campaigns, I think?—Yes; first of all in the Greek War against Turkey, I was on the Greek side; and secondly, I was attached to an American regiment of infantry in Cuba in the war against Spain, and I saw something of the fighting in Porto Rico, in the same way; and my third experience was not on active service, but during the Swiss manoeuvres.

20780. From these experiences there are certain points on which you are willing to give your opinion?—Yes.

20781. In the first place, as to the rifles, do you think the rifle we had was defective?—I would not go so far as to say that, but I certainly found that in the hands of the ordinary soldier it was a slow-firing weapon compared with some others I have seen. For instance, it requires to be filled separately; one puts in the cartridges one at a time, and I noticed incidentally a good deal of carelessness about that. The cartridges are made up, not in the neat little clips which the Boers used with the Mauser rifle, but in brown paper parcels, and one frequently saw that the

20764. But it was not so with your corps?—No; nor with any Irregular corps I know.

20765. Were your men drawn exclusively from the class of ghillies and stalkers in Scotland?—Yes; practically entirely, with the exception of men like shoeing-smiths, tailors, and men from Inverness.

20766. But you select them for their general intelligence, and for their keen sight, I suppose, too?—Yes.

20767. You had plenty who offered, and you were able to select those you really wanted to have?—Yes.

20768. From what part of Scotland chiefly did you draw your men?—Just under 50 per cent. from Inverness-shire, then Ross was the next, Perth, and Sutherland, in that order.

20769. Had you any from the West Coast?—Yes; from the West Coast of Inverness I had a good many; I had an officer who came from North Uist.

20770. From Argyre?—No; very few from Argyre shire—not more than a dozen anyway. I had a good many from the West Coast of Inverness-shire, Skye, and the outer islands.

20771. You consider it essential that there should be a body of scouts, well trained, attached to each division or brigade?—Yes; I think it is more important in the existing state of military affairs than ever to have a properly trained corps of scouts—men not taken from one class only. We could draw men like our own Highlanders, Canadians, Australians, and New Zealanders, who have particular characteristics, one man being good at using the telescope, another peculiarly fine eyesight, another a fine horseman or tracker, making among them a combination of all the points so essential for scouts. If you had some means of working together all those picked men, you would have a body of scouts unequalled in the world.

20772. Having such a body of scouts adds greatly to the comfort and convenience of the other men; that is to say, they are not always on the *qui vive*, expecting that the enemy may be upon them; the scouts are looking out for them?—Yes.

20773. Had you any opportunity of acting with any over-sea Colonials as scouts?—Yes.

20774. And you found them to be good, intelligent men?—Yes; first-rate individually, and distinctly above the ordinary class of intelligence. I think our regiments were better in officers and the Colonials better in the initiative of the individual men.

Mr. J. B. ATKINS, called and examined.

brown paper parcels wore away with friction in the man's pouch, and the cartridges would slip out. I often used to see the cartridges lying about on the veld after an action.

20782. The pouches we have heard were defective?—I suppose they were defective, too.

20783. That may have caused some of it?—Of course. As long as the magazine was being used, it was a rapid-firing rifle, but when the magazine was exhausted, of course the cartridges had to be put in one by one—an operation which takes up a certain amount of time, so that when the magazine is exhausted, for all purposes it is a slow-firing rifle.

20784. With the clip?—I should say for a man who is not a highly-trained marksman the Mauser rifle is the best that could be obtained; but in talking to marksmen who had got used to our own rifle I found that they certainly preferred it with its defects. Some day I have no doubt whatever we shall have an automatic rifle which will eject its own cartridges, and when using which a man will not have continually to change his position, as we do now. Each time a man wants to reload he must change his position. A man with an automatic rifle, which, of course, has not yet been brought to a high enough state of perfection, would be able, without changing his position—and it is essential that he should be in a comfortable position for accurate firing—to fire continually without exhausting and worrying himself. The only question in my mind now is whether in the intermediate state in which we are at present, not having perfected the automatic rifle, the clip is not the best. Of course, the clip is very neat; a man just puts it in and the five cartridges are in place without putting them in individually; on

the other hand there is the weight of the clip; and I have no doubt it will be superseded some day. My only point is whether in the intermediate stage it was not the most handy rifle for the average man.

20785. (*Sir Frederick Darley.*) It has been said with reference to the clip as contrasted with our system of loading, that if you have the magazine fitted you have it always in reserve, and you can load cartridge by cartridge independently of the magazine; whereas, if you have the clip, you must always fire from your magazine?—That is certainly so, but when we have held our magazine in reserve and have exhausted it, then it is extremely difficult to fill it quickly enough for rapid firing, and, of course, one might wish to go on pouring a rapid fire into the enemy for an hour or two hours. I admit the advantage you describe, but I think the disadvantages override it.

20786. (*Chairman.*) Is there any other defect you noticed?—The other was rather in the use of the rifle; the chief point in my mind is that I could not see anything really to be said for the keeping up, which was done so very generally in the Army, of volley firing. And I should like to say that I watched very carefully while I was with the Swiss Army the system which has, as it seems to me, all the advantages of volley firing without the defects. There they give the order for a company or a certain line of men to fire a volley, and when the order is given each soldier brings his rifle up to his shoulder, but he does not wait for another word of command; when he has got the aim—which will probably be within two or three seconds—he fires; whereas under our system—at least as it existed during a large part of the war—we give another word of command when the volley is to be fired—namely, “Fire.” Each man is waiting for that shout, which is an extremely distracting thing to wait for, and the result is, I think, that generally the man at this sudden shout, which distracts him, pulls his aim off the object; or, secondly, he fires without having got any aim at all; or, thirdly, he does not fire at all, because he has missed the occasion, and he is, of course, afraid of getting into trouble if he fires long after the others. Now, the Swiss system, it seemed to me, gave an absolutely concentrated fire, not a volley, as we should call it, but in every respect the equivalent of a volley. They fired within two or three seconds invariably, I found when timing them, of the word of command.

20787. They got all the advantages without the defects?—Yes; it seemed to me so. Of course, I thoroughly recognise the virtues of a concentrated fire, but it seemed to me that this was not impairing those virtues at all.

20788. You think there is the need of cheaper practice ammunition?—I found in the Swiss Army that they supplied ammunition at just a fraction under 4s. in English money for 100 rounds; whereas, I may be wrong now, but the last time I inquired in England the price was, I think, 1s. for ten cartridges, which, in a great many cases, the class of men among whom we want to extend rifle practice is prohibitive. I believe that private firms have offered the ammunition at a cheaper rate, but the War Office, I fancy I am right in saying, at all events at that time, would not allow them to supply it. It was to be supplied officially, and at the official rate.

20789. (*Sir Frederick Darley.*) That is, 10s. 100 rounds, instead of 4s.?—Yes.

20790. (*Chairman.*) How do they manage to sell it so cheaply in Switzerland?—I did not inquire.

20791. (*Sir George Taubman-Goldie.*) Is it not an inferior powder, which would damage the rifle?—I did not inquire carefully enough into that, but there were no complaints; I asked if there were complaints, and they said no.

20792. If you used inferior ammunition you might damage the grooving or rifling of the barrel?—I may have taken an extreme case, but it would still be an important point to get it more cheaply.

20793. Did you notice that the Swiss used Morris tubes much?—I did not see them use them at all; but they do to some extent. I think there is only one rifle range which in this country we should call “safe,” but they have an extreme confidence in their fellow-countrymen’s marksmanship, and I have seen the village public-house keeper or sometimes his wife sitting quite near the target drinking beer all the afternoon and marking in a position which nobody would be allowed

to go into here. There are very often houses behind the range without any screen. That arrangement would not be passed by the War Office in this country; but in every case I saw the practice it was with the full service rifle.

20794. It struck you as good practice?—The practice was good; they were extremely careful, and I might mention here that every soldier in the Swiss Army takes his rifle home; he has it, it is his toy, just as we keep our golf clubs or cricket bats; and just in the same way every cavalryman in the Swiss Army takes his horse home; he has to pay for its feed, which is not expensive there, and a certain amount towards the capital of buying it—a very small sum. With that State aid his horse is practically a cheaper toy to him than it could possibly be in this country—I think as cheap as a bicycle is for a poor man in this country. He therefore probably prefers a horse to a bicycle, and it being the fact that any damage to the horse will have to come out of his own pocket, he becomes a good horse-master, which I think extremely important. I saw the short time that horses lasted in South Africa.

20795. (*Chairman.*) Is that all you wish to say about rifles?—Yes, unless any question occurs to you.

20796. Then as to the artillery?—As to artillery, certainly it was my experience that the short range guns which were so much abused at the beginning of the war were the really effective weapons. I have no doubt of that whatever—chiefly the 15-pounder firing shrapnel. I think a considerable impression was made upon most people in this country at the beginning of the war that our artillery was bad because it was hopelessly out-ranged, and every disaster in the war was attributed to that. I should like to say that not too much attention should be paid to that because I noticed during the war three distinct stages in which the public entirely changed their minds. First of all, they attributed every mistake to our out-ranged artillery; secondly to the stupidity of our officers and when they had forgotten both of those they attributed it to our want of mobility. I have no doubt there was some element of truth in all three, but none of the three is a sufficient explanation of anything.

20797. (*Sir John Jackson.*) Did you find that the shrapnel shells did much damage?—Oh, yes, I did. I noticed that particularly from the guns that were taken from us when the Boers turned them on us; it seemed to us that the bursting power of the shell and the accuracy of it was certainly better than that of the Boers’ own ammunition. What I should like to say is that we undoubtedly ought to have a judicious mixture of the long range and the short-range guns. At the long range I could never find that the practice was very accurate or very deadly.

20798. (*Chairman.*) Do you speak of the Boer fire?—On both sides. But long-range firing has a great effect on the moral of the men; it is a great thing for them to feel that you are 8 or 10 miles away from your enemy and that you are able to say, “I have you in my grip.” It appeals to them, and having been with other armies I think I can fairly say that I have not seen any army yet in which the trust of the men in their artillery is so extraordinarily deep as it is in the British Army. The men feel that the artillery is going to prepare the way for them, and that then under a sort of ceiling of shells, as it were, when the artillery has battered the opposing kopje they will advance, with a fair chance, in comparative safety. It seems to me that that being the fact in our Army, it is extremely important that we should preserve it, and I think if the long-range gun does appeal to them we ought to use it in a judicious mixture with the short-range gun, at the same time understanding ourselves that it is the short-range gun which has done most of the killing.

20799. The Boer long-range gun shells often did not burst?—That is quite true. I think on the whole our ammunition was a good deal better in quality than theirs—very distinctly. At the same time these things are always deceptive. I have noticed in each campaign that each side supposes its artillery fire to be better than the other, the fact being, of course, that when the shell falls wide to right or left you can see it, but when the line is good you cannot tell at a long distance whether it is within a hundred yards or right on the spot, so that there is always this observable—a feeling on each side that it is doing better than its enemy—a very satisfactory feeling.

Mr.
J. B. Atkins.
24 Mar. 1903.

Mr. 20800. Of course, in the other campaigns you had not seen anything like the ranges that were used in South Africa?—No.

J. B. Atkins. 24 Mar. 1903. 20801. (Sir John Hopkins.) You did not see anything of the Meux battery where the range was better?—No.

20802. (Chairman.) Will you proceed?—If I might make a remark about the grouping together of the artillery in the open, that seemed to me one of the things that the common sense of every man was condemning, and, as I said, it is the fact that our men do trust our artillery and are greatly helped by it. It is important that they should not lose confidence in it in any way. They all used to say, and I cannot see where they were wrong, that if it was sensible for an infantryman to take cover and hide himself it should be equally sensible for a gun. Certainly we used at the beginning of the war—I believe it altered later—to draw up our guns in an open place; no doubt the major would look for some slight rising ground, and would measure the paces backwards from it according to rule, to get what shelter he could according to his necessities, but in practice it amounted to very little. And in an open country of that sort it was very difficult to get any kind of shelter for six guns at regular intervals, whereas it very often was quite possible to get very good shelter for one gun or two guns by themselves. The Boers always scattered their guns, and although they did not carry out the principle we have been taught about a heavy concentrated artillery fire, theirs seemed to me relatively to their number of guns more effective, and we could not find their guns. We very often allowed the virtues of our smokeless powder to be defeated by the great cloud of dust which the recoil of the gun threw up. I do not know how the Boers managed to do without that, but I was told that they used to water the ground on which the gun stood, and I fancy that must be true, because one never saw the clouds of dust. It was quite useless to have smokeless powder if you had the equivalent of a great cloud of smoke—the dust which everywhere nearly, except in the wet season, blew up from the ground. Later, in the more irregular warfare, I am told they found the converging fire, firing at a point between two points, making an angle in the apex of 45 degrees or something of that sort, extremely effective. The old saying about one gun being no gun is very considerably modified in my mind.

20803. As to the intelligence of the officers and men?—I should say, first of all, that that is a large question, but the general criticism that I hear in this country is that the Boers had a great deal of intelligence, and that we had nothing to match it, and that we ought to have the kind of intelligence which they have got. Putting that forward in that form has always seemed to me to be the merest nonsense. The form which their intelligence takes is that the ordinary Boer will argue with his General and say: "You see, Commandant, you tell me to go to that hill, but the English are there; you have not seen them, but I have, and I shall be killed"; then the Commandant says: "That is quite right, Jan or Piet," and he modifies his plans. With a very small number of men going about a vast country like that, knowing one another well, and all having the sporting instincts of farmers and big-game shooters, that kind of chaos is possible, and may even be profitable; but to try to imitate anything of the sort in this country would obviously be the greatest folly.

20804. (Sir John Jackson.) How did you get the information as to the Boers' plans?—Simply talking with Boer prisoners, and, of course, when we marched up the country, a great deal of it which we left behind us was surrendered country, and I made friends with the Dutch and talked to them about their system. It seemed to me that the kind of equivalent which we might get begins in a recognition of the quality of our own material, which, of course, in point of intelligence and individual initiative, is inferior to theirs. I think we must recognise that, and that the nearest equivalent we can get—as we must have an equivalent—is to get a real confidence between the company commander and his men, and to devolve authority so far down the Army that it would come to the company commander. For that point I think it is absolutely essential that the company commander should have the whole of his men at a time—he has often only about half—for drill, that the men should not be continually changing, but that he should have as often as possible the same men together, so that they should get to know him. And in active service the commanding officer should take his captains, and,

in fact, every officer, including the non-commissioned officers, into his confidence and explain plans to them—not let them decide what is to be done, but let them know what he has decided, so that they may have an intelligent view. I was astonished in South Africa to find colonels who did not in the least know what part they were playing; they knew they were a unit playing a part in a great game, but what it was they did not in the least know, and it always seemed to me that in carrying out particular operations an idea in reserve in the back of a man's mind as to what relation they bore to the whole, would really have been of great value.

20805. (Chairman.) The company officers improved in intelligence during the war?—I think extraordinarily, and it always seemed to me that the young man, very often the boy just from school, was far more ready to jump into a position of responsibility than the man who had spent his whole life in the Army. The latter's position was too great to be risked. This is partly the fault of the public at home, who will not recognise after failure that risks have to be taken, and that good generalship is often only good judgment in the selection of risks.

20806. (Sir John Jackson.) He was afraid of making a mistake?—Yes. Can I just speak from a few notes I have made?

20807. (Chairman.) Yes.—It seemed to me that at the beginning of the war there was an enormous amount of over-confidence which had its natural counterpart and reaction later in that kind of mental paralysis which I think overtook a few senior officers. I traced a good deal of the over-confidence to the great number of small wars which we have had with savage races, and the ease with which victories were won; in fact, in Natal it was a regular saying that So-and-So was an Egyptian soldier. Not only did the over-confidence extend to the view he took of the enemy, but I think it made him, being satisfied with his own method, less respectful to methods which really would have been of use to him—I mean the methods of Colonials. It seemed to me that the Colonials were half soldiers by their upbringing, just like the soldiers I was with in Cuba who were under Mr. Roosevelt—the "cow-punchers," and people from the West; Mr. Roosevelt made them into excellent soldiers in about ten days, simply because they were extremely handy-men already. It was so with the Colonials; later they were used, but at the beginning they were not trusted enough to act independently.

20808. Are you speaking of the oversea Colonials or of the Africans?—Both; the Australians and New Zealanders particularly. One difficulty, I know, is that the average Colonial is of a different type from the average Imperial officer, and one must recognise these difficulties.

20809. (Sir Frederick Darley.) You are speaking of the officers now?—Yes, they have not always settled down well in their social relations; that is a difficulty, I know, because I know a good many Colonials, and I have talked to them about it. Some of them have stated that their life is not easy and pleasant. But if we are really to have a great Imperial understanding, and if we are to get the full results from it—to draw fully on all the resources of the Empire—it is necessary that difficulties of that sort should be overridden. I think with the Imperial officer it should be a point of honour and patriotism.

20810. (Sir George Taubman-Goldie.) Did you find in the later period of the war that that feeling had died out somewhat?—I was there in the first year of the war; I cannot say what happened later.

20811. (Sir Frederick Darley.) May it not have been that the Regular officer was a highly trained officer, and in the majority of cases perhaps the Colonial officer had not that training?—Yes, that was very often the reason of the mistrust; he felt the Colonial had not been trained as he had himself. My point is rather the broader one that in the peculiar circumstances the Colonial's natural readiness and resource could have been turned to even greater account than the more inflexible drill of the soldier who had been trained at home. If I may go to another point, I say to get the equivalent of the Boer intelligence we shall have not only to devolve authority and responsibility, but get better education right through the ranks, and that I think should come very largely through the non-commissioned officers.

20812. (Sir John Jackson.) Do you think the average Boer is a better educated man than the average British

soldier?—From the literary point of view he is worse, I think, but as a man who has practised what I may call nature study he is much better—he is five times better. I should certainly like to see the non-commissioned officer taken to some extent into the confidence of the officers; with the present extended order we have not got the old sense of support, each man shoulder to shoulder with his neighbour; under modern conditions for better or worse a man is more isolated than he used to be, and if we cannot hope to get a high degree of individual intelligence in the ordinary soldier, I think the next best thing we can get is to make the non-commissioned officer more highly trained, and therefore less dependent. I should like to see him—what one practically never saw—using field glasses. If I had not had field glasses in South Africa I should not have known what was happening, and I might as well have come home; things began to develop at such enormous distances, and the non-commissioned officer often knew nothing of them. The field glass, with some exceptions, was regarded as the adjunct of the commissioned officer.

20813. (*Chairman.*) Have you anything else under that head?—I should like to say that although, under modern conditions, the men are more isolated, their trust in their officers in another sense will have to be greater than ever. If we get men rather more intelligent, the results of intelligence—a few of them rather disastrous results, I fear—would begin to appear. I found in the Greek Army, where the people are mercurial and quick in all their habits of mind, they could not distinguish soldiering from politics, and when anything went wrong in the field they thought they were betrayed; they cried out, “We are betrayed,” in the same way as a good many of the French did in the Franco-Prussian War. Therefore if non-commissioned officers and men begin to think for themselves it is essential that the education of the commissioned officers above them should increase in proportion, so that the non-commissioned officers and men really may have in a new form the old faith in the commissioned officer. They trust him now, you may say, because they regard him as a gentleman.

20814. You must maintain discipline, all the same?—All the same, yes; it would only be rather a new aspect of it. I believe that everything, so far as I was able to judge from these three campaigns, lies in leadership. I think it grossly unfair, although there is some truth in it, to say that one nation is a nation of incompetents or cowards, and that another nation is a nation of good fighting men. I found in Cuba, for instance, that one regiment of Volunteers lay down in a lane where there was a very heavy fire, and, as often happens when once men have been allowed to lie down—men who would have gone on if they had never lain down at all—it was impossible to get them up again. Actually some of the men coming up behind walked over their bodies. Then, when it looked as though they were absolutely lost for the day, one captain jumped out of a sort of jungle close by and called to his men by name, and they got up one after the other and followed him, and they joined in the charge up the hill, but the rest of the battalion remained. It always seemed to me that unless one is to assume a miracle, which I do not, you cannot suppose that all the brave men were in one company and all the cowards in the rest; it was purely a question of trust in the one man's leadership. Might I say in conclusion that I think in all wars there has been a tendency not to appreciate sufficiently the methods of people who might be of great use simply because their method differs from that which we ourselves have been accustomed to practise. I noticed in the Greek War certain foreign Volunteers who could have managed the whole Greek Army, and would probably have protracted the war for some weeks if they had been allowed responsible positions. They were given no responsibility. In the same way the Cubans were despised simply because the American soldier, who had been brought up in his own way, more or less our way, could not conceive that a man who crawled through the bush on his belly, and did not know what a division or a brigade or a battalion was, could be of any use. We, again, made no serious use of the fine Turkish soldiers in the Crimea. I think to some extent one can apply these points to our relationship with the Colonials, who were not used enough in scouting, in which they would have been peculiarly good.

20815. You wish to speak about the use of cycles?—I should like to say about cycles that, although I generally used a horse myself, I did use a bicycle, and I was astonished to find on the whole how well you could get about even in Natal in the wet season. I often used

from the front to send my servant down with a message for supplies to Pietermaritzburg, and he would travel 50 or 60 miles in the day, choosing a track for himself even in the rainy season. Then later on, when I was with Lord Roberts, I saw the City Imperial Volunteer cyclists, and they astonished me by the way they got about on the veld.

20816. Of course, it is a very unenclosed country, which would help them?—It is a very unenclosed country, but the more enclosed a country the greater the number of roads in every case, so that in this country I think it would be far easier even than in an open country like South Africa. I would judge also from the number of bicyclists who follow hounds now; they generally seem to me to be there or thereabouts at the end of a run, but the great point is that the principle involved is really an important one; we cannot get other people's intelligence, but we can get the equivalent of it. Here is a great national pastime—the use of the bicycle; people do it extraordinarily well; they ride bicycles better than they ride horses; they understand their bicycles, and most of them can make temporary repairs, and I certainly think this accomplishment ought to be laid under contribution.

20817. You have not seen it used for military purposes?—I saw the City Imperial Volunteer's using it; they had a bicycle company.

20818. But not on a large scale at all?—No, just one company, and they were used chiefly, I think, as gallopers.

20819. I think we have been told that for any large number of men it takes up so much more room, a corps on bicycles, than a corps mounted on horses?—I am not prepared unreservedly to insist on bicycles for expeditionary work; what I had in my mind was rather the use of the bicycle in this country for the purposes of home defence, in which I hope the Auxiliary Forces will play a predominant part. Certainly the use of a bicycle does give a man the sense of direction, and that is a kind of nature study; he gets his geographical sense developed.

20820. The next heading on your *précis* is balloons?—I did not go up in any balloons, but I have talked a good deal with officers who used them. I found they praised very much the goldbeater's skin which was used, and they said how extraordinary the difference was between it and varnished silk—the power of retention was so much greater. In one case I was told the balloon remained inflated for 13 days, which was a very long time in that climate, and was usable on the 13th day. Of course, the great difficulty with balloons is the intense vibration. The Swiss I found had a balloon built on the principle of a kite; the balloon itself was a kind of aeroplane in the shape of a bolster; it was tethered near the middle, and when the wind caught it, instead of lying right over, as our ordinary balloon is inclined to do, it was lifted, so that the movements of the balloon (of course, this is speaking in a general sense) in the wind were rather vertical than horizontal. I was told that the vibration for that reason was less. I believe vibration is the great difficulty in connection with taking observations. A Boer gunner told me he found it impossibly hard to gauge the distance of a balloon when it is above a certain elevation. Of course, I need hardly say that balloons should be kept far enough back. In the Spanish-American War the American Army advanced through the jungle with a balloon in the van of the advance, and the only thing which showed the Spaniards where they were was the balloon and the rope hanging from it.

20821. Is there any other point you would wish to mention?—I think that is all, unless anything occurs to the members of the Commission.

20822. (*Sir Frederick Darley.*) With respect to the Colonial officers and the Regular officers you spoke of had you in mind the oversea Colonials?—Yes, I was including them—Australians and Canadians.

20823. Did the Australians complain about what you have mentioned?—I have distinctly heard Australians complain of that.

20824. There were a good number of Australian officers who were attached to the Regular regiments, were there not?—Yes; I think it is rather since the war that I have heard the complaints of attached officers, and I fancy that in the rough kind of life out there there was unbounded good fellowship.

20825. I knew a good many of the Australian officers,

Mr.
J. B. Atkins.
24 Mar. 1903.

Mr.
J. B. Atkins.
24 Mar. 1903.

and the evidence you have given about the Australians took me very much by surprise?—I should have guarded myself against misunderstanding; I do not think there were difficulties in a social sense on the veld; I have been told since of those. Of course, being in England, I have not been able to go over a wide field of evidence on the point. But in some cases it was undoubtedly said that Colonial officers who had accepted commissions were not as happy as they might be. In South Africa, I think, the feeling of Colonials went no further than that their peculiar capabilities were not used enough.

20826. I always understood that the Colonial officer

owed a great deal to the Imperial officer for his good feeling towards him in every way?

20827. (Sir John Hopkins.) I have only one question to ask, and it is with respect to the short-range guns which came out much better really than they were given credit for; of course, you will admit that if you have a long-range gun, which does not entail greater weight nor any other disadvantages in its use, it will be better to be able to use that both as a short-range gun and as a long-range gun than to be satisfied with a short-range gun?—Certainly—a gun of interchangeable ranges would meet the case—certainly.

FIFTY-FIRST DAY.

Wednesday, 25th March 1903.

PRESENT:

The Right Hon. The Earl of ELGIN AND KINCARDINE, K.G., G.C.S.I., G.C.I.E. (*Chairman*).

The Right Hon. The Viscount ESHER, K.C.B., K.C.V.O.
The Right Hon. The Lord STRATHCONA AND MOUNT-ROYAL, G.C.M.G.
The Right Hon. Sir GEORGE DASHWOOD TAUBMAN-GOLDIE, K.C.M.G.

The Hon. Sir FREDERICK MATTHEW DARLEY, G.C.M.G.
Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.
Sir JOHN EDGE.
Sir JOHN JACKSON.

BERNARD H. HOLLAND, Esq. (*Secretary*).

Sir ANDREW NOBLE, Bart., K.C.B., called and examined.

Sir Andrew
Noble,
Bart., K.C.B.
25 Mar. 1903.

20828. (*Chairman*.) You are the Chairman of Sir William Armstrong, Whitworth and Company?—I am.

20829. We asked you to be so good as to come here to-day to give us information in your possession with regard to the supply of guns for the Army. I believe you are prepared in the first place to speak to the state of preparation of the Transvaal and of our own troops at the outbreak of the War?—Yes, to a certain extent. Naturally, I heard a good deal, from Continental makers of Artillery, and from other sources, of what was going on in the Transvaal; but I believe that information was open to almost everyone who cared to take an interest in the subject. Having, moreover, served in South Africa myself, I knew something of the country, and I saw the authorities at the War Office, and pointed out that the guns that were being imported into the Transvaal could be intended to be used against no country except this country.

20830. (Sir George Taubman-Goldie.) About what date was that?—That was about two or three months before the breaking out of the War. I also pointed out, I think, when I saw one of the high officers at the War Office, that we were perfectly justified in enquiring for what purpose these guns could be intended, as I stated from my own knowledge during several Kaffir wars in which we had been engaged (I was in South Africa at the close of the last large Kaffir war), that in no case had even a position, garrisoned by 20 men and a subaltern been taken by the Kaffirs, and that formidable six-inch guns could never be intended for use against the natives, as the Boers must have quite well known our experience. However, I was told that it was quite impossible to do anything without making difficulties, in fact without rendering war certain. I said that I thought that in that case war would be certain, and I think I cited the case of Frederick the Great when he invaded Saxony because he could get no answer as to the preparations that Austro-Hungary and other nations were then making. If I remember rightly, that General said that, if he did not get a distinct answer, he would consider an evasive answer equivalent to a declaration of war. Well, he did get an evasive answer, and within a week he had 100,000 troops in Saxony, and obtained proof of the combination against him. I think that a strong measure like that on our part might have saved a great deal in the long run. When this country made active preparations Mr. Kruger acted as did Frederick the Great.

20831. (*Chairman*.) It would have taken us more

than a week to have put 100,000 men in the field?—No doubt, but still I had known, certainly for three years, of the preparations going on, and I had supposed, perhaps ignorantly, that the same information was at the disposal of the Cabinet.

20832. If that information was at the disposal of the Cabinet, do you think they ought to have made some further preparations earlier than the time at which you spoke?—That was what I pressed. When I did speak, Lord Wolseley was very kind to me, and I believe they had actually given instructions about bringing a division from India; but I am not quite sure whether that was so or not—it is nearly four years ago now. At the same time I may say upon that subject that I do not see how it is possible, unless our policy is changed, that we can ever be sufficiently prepared in the case of a war suddenly breaking out. I need not point out that in the great campaign to which I just now alluded, Frederick had his army chest full, and at his own disposal. We know further that at this moment Germany have a very large sum of money, over which the Parliament have no control, and which can be spent immediately, without going to Parliament. It seems to me that the only way in which efficient preparation for war can be made, seeing the questions to which every Minister is now subjected, is that the War Office and Admiralty should have at their disposal a very considerable sum of money, not to be spent, of course, except with the authority of the Cabinet, but at the same time so that it would not be necessary to proclaim the fact to all the world; as things are now, all the world knows the next day what preparations you are making, if the present system of questions as to raising money is allowed to go on.

20833. (Sir George Taubman-Goldie.) Could they buy guns and other warlike material without its being known?—Yes. My firm have done that more than once for other nations.

20834. (*Chairman*.) To that the best reserve of material would be in the money chest; that is what you mean?—Yes.

20835. There are difficulties, I suppose, in maintaining a sufficient reserve of material always available for use?—Yes. I think there was that difficulty, but I suppose that also was from want of money. We were making, I may mention, for the War Office, shrapnel shell for field guns at the time the war broke out. I think we were manufacturing at the rate of about 200 or 300 a

week. About five weeks, I think, after the War broke out, I was sent for to the War Office, and asked what I could supply. I said that I thought in time we could get up to 7,000 a week. But we might have been doing 7,000 a week at that moment, if they had told us of their requirements six or seven weeks before. You see for manufacturing at that rate it is necessary to increase enormously your tools, and in the case of shrapnel shell your moulds for the production of the bullets and other details, which of course take a very considerable time. We did get up very quickly to near that quantity. But when the demand was made, I was told that there was not a single shrapnel shell in England except what was in the limber boxes of the Artillery, and I think I was told that there were only six field guns available.

20836. (*Sir John Hopkins.*) Small guns?—Yes, small field guns. I mean guns not in the hands of the Artillery or the Navy.

20837. (*Chairman.*) So that you think for the field and heavier guns a suitable ammunition was very deficient after the outbreak of the War?—Yes.

20838. (*Lord Strathcona and Mount Royal.*) Is it not the case that day after day so many improvements, at least what are considered improvements, are made in guns that it would be undesirable to keep a large stock of any particular type?—That is perfectly true, but you must have a sufficient reserve also to replace guns or other stores that may require replacement. For example, in the case of a ship a very considerable change might be required if you were to take a new pattern, and for an old ship it is probable that a gun the same as the other guns mounted in the ships would be required. In the case of garrison guns, of course, that is not quite so certain, but even there it may be necessary to replace a gun by one of the same pattern. But there is a very great deal of truth in the question you asked.

20839. Of course, each nation is endeavouring to keep pace with, or to get in advance of, other nations with regard to its guns?—Well, I believe I have had a longer experience than most people of these changes, and I know that in this country we have sometimes fallen more or less into the back ground, simply because the authorities wished to wait for a finality which can never be attained.

20840. (*Sir George Taubman-Goldie.*) When you suggest the Government having a considerable sum in hand for the purchase of material have you given any consideration to the amount that you would consider necessary?—Well, I have. I do not pretend in any way to be an authority upon these subjects, but I have thought that if there was a sum of ten millions at the disposal of the Admiralty and the same sum at the disposal of the War Office, not to be spent at all, except when privately informed by the Cabinet that they might go on, efficient preparations could be made. I am only an outsider and do not trouble myself much with political things, but so far as I can see the license that is given to questions in the House renders anything like efficient preparations by the two great War Departments practically impossible for great contingencies.

20841. And in forming this idea you must no doubt have considered in your mind to what extent Parliamentary control from time to time would be necessary over that sum?—Yes. I think that the Cabinet should be free to make necessary preparations without going to Parliament, without an Act of Indemnity. I suppose a strong Government might spend money, and hope to get an Act of Indemnity, but a great many people, I imagine, judging by myself, would be rather afraid of that step. I think they should be quite free to spend the sum I have named on preparations if they should consider it necessary.

20842. But you would, I suppose, assume that they would every year in the Budget give an account of the expenditure?—You might make a limit of years within which they should give an account, but of course I do not mean that the amount held in reserve ought ever to be expended unless they thought there was a very considerable reason for so doing.

20843. (*Lord Strathcona and Mount Royal.*) You would always keep up a reserve of ten millions?—Yes, that must be done.

20844. And you consider, although that is a large sum that it would be insignificant compared to the enormous cost involved in entering upon a great war when unprepared for it?—Yes.

20845. And when money is invariably expended lavishly?—Yes. We need only go back to the Crimean War and others; there was two or three times as much wasted on the Crimean War as would have been necessary if we had been in a state of efficient preparation.

20846. (*Chairman.*) You have told us about the Government approaching you for additional ammunition. Did they also ask you for guns at that time?—Yes, they did to a considerable extent.

20847. And did you supply them?—Yes, we supplied them; we were manufacturing a good number for the Government at the time, but of course to manufacture for the Government is always a very slow operation compared with when we are left free to ourselves. I daresay you have heard of what was generally called the Elswick Battery. That battery was bought by Lady Meux and presented by her to Lord Roberts. Lady Meux wrote to me on the point and asked what we could do. I said that the most effective gun I thought that we could give was our Naval 12½-pounder, and we had some partly in course of preparation, but we had no field carriages for them; however, we made the field carriages in six weeks and finished the guns, and I should say that the battery itself was sent out in about six weeks after Lady Meux wrote to me. I was anxious about the battery, because the guns were very much more powerful than the ordinary service guns; they had a velocity of about 2,200 ft. a second, whereas the service guns only had a velocity, I think, of about 1,600 ft. a second, or rather less—1,560 ft. But we were a little anxious, because I was afraid that when that battery got out it would be put in store, that nobody would know anything about it, and there would be no horses for it. We were sending out from Elswick a battery of men and horses which were raised by the County of Northumberland, and I telegraphed on a Friday to Lord Roberts suggesting that as the guns were his he should allow them to be handed over to these men who knew more or less about them. He did so. I telegraphed to him on Friday night, and on Saturday before 12 I had his answer, in which he highly approved, and accordingly that was arranged. The battery went out to South Africa, being horsed and manned by the county, and it was found exceedingly useful. It was found specially useful because they could use the guns for obtaining distances and firing at long ranges which the others could not reach, that they finally broke up the battery and attached the guns to six separate divisions, so as to give one of these long-ranging field guns with each; and the whole time that the battery was there no gun was put out of action, and Lord Roberts and everybody spoke of it in terms of the highest praise.

20848. We have had evidence to that effect. You give that illustration as showing that you could send out a battery which you had full control of quicker than you could supply guns to the Government?—Yes. You will fully understand that I am not objecting to the rules of the Government. I have been Inspector of Artillery myself when I was in the Government Service; I decided questions off my own bat, so to say, which now are referred to a committee, and it often takes a long time to get a decision, and in that way there is great delay. That is one fault I find. The Navy are freer from it than the Army. I think myself that many questions are now referred to committees which had far better be left to the Heads of Departments themselves to settle; it kills everything like independent judgment in the men. There are some instances that one could mention where a man considers himself bound by certain rules which are generally very right and proper, but become ridiculous when applied to particular cases. I think there should be more freedom left to the intelligence of the officers than is now the case.

20849. I should have thought that when the country was in the state you describe at the beginning of the War, with only six guns in reserve, an order would have been placed with your firm, and it would have been left very much to yourselves as to the making of the gun?—In one or two cases I obtained a relaxation of the rules, but

Sir Andrew Noble, Bart., K.C.B.

25 Mar. 1903.

Sir Andrew Noble, Bart., K.C.B.
25 Mar. 1903. not generally. I will give an instance of what I mean. In manufacturing a gun where there are numerous parts, it frequently happens that you find some defect in a piece, when you come to machine it, for which it must be rejected. I more than once have tried to be allowed to manufacture extra pieces, so that when one failed we might go on with the manufacture without a stop, but the moment the Crown stamp is put upon it we are stopped. I pointed out that we are not paid, that the material is our property, and that the Crown stamp means nothing, but as a matter of fact we are not allowed to do it except in some special instances, when I went straight to the War Office and said, "I must have it because I cannot do what you require otherwise," but it costs the Government nothing our making an extra piece or two; it is at our risk. But then the Inspectors say that if they have stamped it they will not have it used for anybody else. I have pointed out, "It can do no harm, we will cut off your stamp and then it is done with." You will understand that if a piece be rejected we have to commence again *de novo*; we have to cast, forge, and machine up to the same point, whereas in the other case we could go on at once. And that might make a delay of some months, which might all be avoided.

20850. (*Sir John Jackson.*) Is that the only objection they have, the question of the stamp?—I cannot conceive any other, because the piece is not War Office property.

20851. You do not charge them for it?—No, we cannot charge them for it. We are to supply the gun at so much. All we ask is, "Will you test and stamp on one or two pieces extra in order to avoid delay."

20852. (*Lord Strathcona and Mount Royal.*) What is the longest effective range of the guns of the battery sent out by you?—I think you would get very fair shooting with it 8,000 or 9,000 yards.

20853. And what would be the weight of the gun?—These particular guns weighed 12 cwt. The total weight behind the horses, if I remember rightly, including limber, ammunition and all, was, I think, 41 cwt., but the officers of the battery wrote to me to say that whoever else wanted for horses their guns never wanted; the commanding officer always saw that they were efficiently horsed.

20854. And what was the weight of the gun the Boers had which they spoke of as Long Tom—their large gun?—Their large guns would weigh about six tons nearly; they might be a light pattern, in which case they would be about five tons; but that is the gun

by itself without its mounting. The Boers did wonders in the way of conveying their guns about; they used 16 to 30 trek oxen for dragging them about; and then they put in an amount of hand handling, using drag ropes and putting on 100 or 200 Kaffirs to pull them up difficult points.

20855. And what was the range of that gun?—With that gun and that altitude, I think, if I remember right (I forget now) the Transvaal is some 5,000 ft. above the level of the sea, you would get easily 12,000 yards or so.

20856. (*Chairman.*) In your précis you say you would speak to the powers of production of field and heavy guns of your company. Will you please do so?—I have gone into that rather carefully since I got back from Italy, and I have prepared a table, if I may read it.

20857. If you please?—I ought to explain that in doing this, not to burden it with too large a description of the guns, I have taken only five or six sizes, but it is easy for any expert to know if the quality and calibre of guns vary what variation in the production that will make. You will understand that the statement gives the rate of production per year; it does not mean that we could commence to deliver at that rate to-morrow; we must be in course of production to do it. In 12-in. guns we could supply 16 guns a year, and the number of mountings for 24 guns. You will observe that our power in mountings is considerably more than in guns, for this reason, that we make mountings for a good many guns, for the Navy especially, that we do not make. Of 9·2-in. guns we could make 24, and mountings for 25. Of 7½-in. guns we could make 36 and mountings for 30. Of 6-in. guns, 140 guns, and mountings for 144. Of 4·7-in. guns, 168 guns and mountings for 180. Of smaller guns, including garrison, field and Hotchkiss, 900 guns and mountings for 900—all these being per annum. Of the ammunition for the 12-in. guns we could produce 4,500 rounds; for the 9·2-in., 7,500 rounds; for the 7½-in., 9,600 rounds; for the 6-in., 51,000 rounds; for the 4·7-in. guns, 40,000 rounds, and for the smaller guns, including garrison, field, Hotchkiss, Maxim-Nordenfeldt, and so on, about, I might say, a million rounds, but the figure is 930,000. As regards armour, we could manufacture about 9,000 or 10,000 tons a year, but as that quantity is not likely to be required we could at present only machine between 5,000 and 6,000 tons a year. Of course, it would not take us very long to put up additional machines and so machine the whole quantity we could make.

NUMBER OF GUNS, MOUNTINGS, AND AMMUNITION CAPABLE OF BEING MANUFACTURED IN ONE YEAR
BY SIR W. G. ARMSTRONG, WHITWORTH, AND COMPANY, LIMITED.

Nature of Gun.	Number of Guns.	Number of Mountings for	Number of Projectiles.	
12-inch - - - -	16	24 Guns	4,500	Chrome steel semi-armour, piercing common shell and lyddite shell.
9·2 " - - - -	24	25 "	7,500	
7·5 " - - - -	36	30 "	9,600	
6 " - - - -	140	144 "	51,000	
4·7 " - - - -	168	180 "	40,000	
Smaller, guns including garrison, field, and hotchkiss.	900	900 "	930,000	Shrapnel or common shell.

For each 12-inch mounting not required, two 9·2 inch or 7·5-inch mountings could be provided extra, and for every two 6-inch mountings not required, three 4·7-inch mountings could be made extra.

For every two 12 inch projectiles not required, three 9·2-inch or four 7·5-inch could be supplied extra, and for every two 6-inch projectiles not required, three 4·7-inch could be provided extra.

With regard to our production of ships we could commence and launch in one year from Elswick shipyard the following vessels: Two battleships of 17,000 tons each, one first-class cruiser of 15,000 tons, one first-class cruiser of 10,000 tons, two second-class cruisers of 4,000 tons, two third-class cruisers or gunboats of 2,000 tons, and four or five torpedo boat destroyers, or other small ships, of 500 tons; that is all at Elswick. Our Walker Shipyard is devoted to merchant ships together, but in case

of emergency we could do two or three first-class cruisers there. That is our power of production. But to show you that I do not speak altogether without something to go upon, in the year 1896, which was the busiest year we had, we had at one time under construction no less than 20 men-of-war. I hand to Sir John Hopkins a list giving displacement and indicated horse-power. There were two torpedo-boat destroyers, there was a battleship of 12,300 tons, six cruisers varying from 3,500 to 7,000

tons, two small armour-clads for Norway of 3,500 tons each, the armoured cruiser "Higgins," of 8,500 tons, the "Asama" and "Tokiwa," two first-class cruisers of 9,700 tons, and some other ships.

20858. Were any of those for our Government?—I do not think we had any important vessel.

20859. (*Sir John Hopkins.*) There were two torpedo-boat destroyers, the "Swordfish" and "Spitfire"?—Yes. At that time we preferred our own construction, if we could get it, our own design. Mr. Watts, the present Director of Naval Construction, was our designer.

Sir Andrew Noble, Bart., K.C.B.
25 Mar. 1903.

20860. The "Pactolus" you had too?—Yes.

LIST OF VESSELS UNDER CONSTRUCTION AT ELSWICK AND WALKER SHIPYARDS DURING 1896.

Name.	Type.	Where Built.	Displacement.	I.H.P.
"Swordfish" - - - -	T. B. D. - - - -	Elswick - - - -	270	4,500

"Don Carlos" - - - -	" - - - -	" - - - -	4,500	12,500

20861. (*Chairman.*) That table shows your power of production. Can you say in what way that great power of production is available for the purposes of the Government in a case of emergency?—The whole place including ships building could be at the disposal of the Government. There could be immediately an Order in Council prohibiting the exportation of warlike stores or war vessels.

20862. You say that it all would be at the disposal of the Government subject to the observation you made at the beginning, that they gave you a sufficient notice of any big demand that they wanted?—Yes. It is not always understood that we cannot bring our full powers of supply into operation till some months after we receive the order, although the exact time depends on the particular nature of store required. In the first place, if it were required to double production by working night shifts you cannot get the men trained immediately, you cannot get always the number at once, and there are innumerable difficulties of that sort. There are the tools and gauges to provide, and fifty different things to be done, and all these take a great deal of preparation. When once you have them, you can go on quite easily. But the general course with Government orders, especially in emergencies is that you come up to a rapid rate of production, and then the demand stops dead short. We have no such trouble, of course, with outside orders, because we can arrange, but if you go on producing a large number of stores, and then the moment the emergency is over everything stops, you have your hands all sent away about their business, and when the next supply is wanted they have all to be got together again, and fresh hands taught, and so on.

20863. And in order to get the full assistance which you would be able to give there ought to be relations between you and the Government which would enable timely notice to be given of large orders?—Yes.

20864. Then you are prepared to speak to the most suitable ammunition to be used in heavy and light field guns?—As regards field guns, I may say that, taking field guns alone, the shrapnel shell is the most effective you can have. I am not quite sure that a certain proportion of shell (I will not say at present with what explosive) should be used, but there is a very great difference of opinion upon certain points among artillerymen, and it is natural this should be so. One is the angle of dispersion that you are to give to shrapnel on bursting; another is whether there should be common shell or not carried by field and horse artillery. You are, of course, aware that a large number of shell charged with what they please to call lyddite were used in South Africa, but the English Government insist that no fulminate shall be used in any shell fired from guns. Now you cannot, at least, it has not been done up to the present, obtain a satisfactory detonation with small lyddite shell without the use of a fulminate. I do not know that much is required, but you cannot do it without. I daresay everybody has seen accounts in the papers of how the smoke of the lyddite shell was either green or yellow. If it is either green or yellow, that simply means that it is not detonated. If a shell is detonated the smoke is a dense black, and there is no trace of yellow at all. In certain experiments which we made, of which Sir John Hopkins is well aware, we succeeded in detonating perfectly with mercuric fulminate shell of the larger calibres charged with lyddite and the effect produced was very

Sir Andrew Noble, Bart., K.C.B. great. I thought it might interest the Commission to see what can be done with cast and wrought iron shell, and I have brought a very small portion, but a fair portion, of a small shell detonated with fulminate; and you will see in the cast iron shell that most of what is produced is of the very finest dust. (*Handing round some samples.*) In this one the picric acid was lightly pressed, not melted, and you will observe that there is a great quantity of dust, but not so much as there is in another, where you see that the cast iron has been reduced, the greater part of it, into absolute dust. Again, this is a steel shell. You fully understand that I have only brought a small portion of it, but a fair representation of the burst. But there is a portion of the steel shell, and you see there is a little dust in it still, but the shell is perfectly detonated.

20865. (*Sir John Hopkins.*) We have heard that the charge in the steel shell will only practically rend it, and will not go further than that?—That is simply because it is not detonated.

20866. This (*pointing to a bottle filled with small pieces*) points to a very conclusive burst of the whole shell?—Yes, that is one of the biggest bits of the shell.

20867. That is the ordinary shrapnel, is it?—No, that is common shell, steel common shell. In fact, it is the shell you use in the Navy. To finish about the shrapnel, there is a considerable difference of opinion among artillery officers as to what should be the cone of dispersion. Here are rough sketches of three varying examples. (*Exhibiting one sketch.*) There are here roughly, excluding splinters, about 250 bullets. That shows with the service muzzle velocity a cone of depression of about 10 degrees.

20868. At what distance in front of the target was the burst?—I forget at this moment. I think about 10 yards. That—(*exhibiting another sketch*)—has about 13½ degrees, and that—(*exhibiting another*)—has about 19 degrees. What you have to consider is now what that dispersion would be at 6,000 yards. You must remember that the rotation hardly decreases, and the bursting charge does not decrease at all, while the velocity decreases greatly. At 6,000 yards the velocity will have decreased to something like 620 feet, and that causes considerably greater dispersion, the cones at that range being 50 per cent. greater than I have named, but these three targets represent the difference of dispersion at the muzzle without altering materially the number of bullets you can get into the shell.

20869. In the case of the lyddite charge for the shrapnel shell it is kept down to a very small quantity, is it not?—I do not think you would ever put lyddite in a shrapnel shell.

20870. That is burst by ordinary powder?—Yes, just the ordinary powder.

20871. Because we heard a great deal about the failing of the lyddite shell—those must be Naval ones?—Yes.

20872. Because the artillery shell is all shrapnel?—Oh, no, they had batteries carrying common shell charged with lyddite, but, so far as I have been able to learn I do not believe many of them detonated completely. I do not say that it follows that because they did not detonate, they might not be more or less efficient—that is quite possible; but if you are firing against a stockade or anything of that sort, in that case, you want the complete effect, and that you would not get unless with complete detonation.

20873. (*Sir Frederick Darley.*) What is the objection on the part of the Government to having a fulminate—is it because it is dangerous in carriage?—Because it is set off with so slight a blow that, unless you take proper precautions that there should be no risk of any friction in the shell, and no risk of even a slight blow it is unsafe, as if the lyddite shell burst in the gun, the gun is destroyed. At the same time, I am bound to say that England is the only nation that I know of that absolutely prohibits fulminate in the shell. I myself think that a moderate quantity, with proper precautions, might safely be used. In the experiments to which I have referred, and which Sir John remembers, including the Admiralty experiments, the experiments at Lydd and those at Silloth—I am speaking from memory—but I think we fired more than 300 rounds of common shell charged with melinite. (I call it melinite because they had not invented the name of lyddite then). They all

had—I forget whether it was a gramme or two grammes—I think two grammes, or grains of fulminate, and we never had a single accident. But, then, the French primer which we got at first I considered so dangerous that I would not use it, and we used one that was modified from Abel's primer; but I would not use the first primer because there were three cones, one within the other, and I was afraid that the fulminate might get between these cones, and would fire.

20874. What are you using now as the fulminate, a charge of mercury?—Mercuric fulminate.

20875. (*Lord Strathcona and Mount Royal.*) Is the composition of the different explosives, that is the different varieties of lyddite and the others, in each case always alike, or are they different—take the melinite, for instance, or any of the other fulminates?—Fulminates are perhaps the most certain detonators, but also the most dangerous.

20876. Is there a difference in the strength of these different explosives?—The one we use, what is called lyddite, is simply picric acid, and that you have to get of a certain purity, and it is simply melted and put into the shell. In my opinion, picric acid, as far as I have seen, is so efficient an explosive that I cannot conceive anything being wanted much better. It is as safe as any of these high explosives can be; I know of none safer at least, and it is easily manipulated. The strange thing is that picric acid, as you are aware, is used very much for colouring, as a colouring matter, and it has pleased the authorities to say that if picric acid is being conveyed by rail for the purposes of colouring, it passes as an ordinary substance, but if it is coming to be filled into shell, then it passes as an explosive, and why that peculiar difference should be made I cannot understand. If it were in the shell, of course it would be a very different thing.

20877. (*Sir John Hopkins.*) With regard to these lyddite shells, how is the charge exploded now if they use no fulminate?—They have got a mixture in a tube, it is called picric powder, and if you can get enough of it in a big shell you can get a fair detonation, although I do not know that it is quite as certain as the other. But you cannot in a small shell.

20878. What do you call a big shell—six-inch?—Yes.

20879. But not a twelve-pounder?—No, you cannot detonate perfectly in a twelve-pounder, although the Explosives Committee, I suppose I may say, have been making experiments to try and get something that will detonate. I do not know that we have succeeded perfectly yet, although we have approached perfection. We are very much better than we were.

20880. That rather points to these lyddite shells in the field guns being ineffective so far as the detonation goes?—They were ineffective so far as complete detonation went, but it is quite possible that they broke up sufficiently.

20881. Then in your mind it is clear that if you fulminate the lyddite charge in the 12-lb. shell it bursts in to a certain number of pieces?—Yes, there is no question about it.

20882. While we are on the gunnery question I should like to ask you this: As a gunnery expert we shall be glad of your opinion on the accuracy of the 4.7 gun and the 12-pounder naval guns at extreme range. We shall also be glad to hear from you any of the causes detrimental to their accuracy; because we have had evidence alleging a want of accuracy in the practice with those guns? The 4.7 gun is an exceedingly accurate gun. I can easily conceive, especially with people who did not understand it, that at the commencement of firing, especially if the officers used the range tables that were furnished to them, they would find that they were very much out; because I need not tell you that the resistance of the air at 5,000 feet above the level of the sea will be a very different thing from what it is at the level of the sea. They would have difficulties also with the fuses which would burn a great deal slower, and I should say myself that if they were firing at long ranges their fuses might easily be a second, or two seconds longer than they should be. The 4.7 gun and the 6-inch gun are both accurate. I must say also that I have been astonished to see the Admiralty Returns, at least the Returns we have sent to us occasionally, of

the prize firing of the Navy. The firing of many ships is wonderfully good.

20883. I mean the guns on shore more than anything else?—With the guns on shore the advantage will all be in favour of accuracy.

20884. Quite so?—I am only going to point this out. As you know the prize firing is this; A vessel starts firing on reaching a buoy; she is 2,000 yards off the target; she steams for three minutes, approaching to 1,500 yards, she ceasing firing at a buoy at 2000 yards. I remember (again I am speaking from memory of a certain ship, whose name I forget) her ten 6-inch guns fired, if I remember right, in the three minutes 148 rounds, at varying distances you will observe, and so far as I remember 114 rounds hit the target. I cannot consider anything much more perfect than that for effectiveness.

20885. I think that the individual who said that was not quite cognisant of the effects as you say of the atmosphere, and also even the conditions of the heat as affecting the charge and also distinctiveness of vision and other points; I do not think he had taken that into his calculation at all. But we are glad to hear your views as an expert, as to what may be considered good practice from a gun of that sort, and what is in the way of good practice?—That is my opinion. Of course, I need not tell you that a very great deal, as well as the gun, depends upon the form of projectile, and there may be something in that. I may point out however for the Elswick Battery we took Naval guns and I have had sent to me again and again remarks on the wonderful accuracy of these guns under conditions the officers were altogether unused to.

20886. It is the fact, is it not, with regard to practice from guns of all sorts that where the firing is at a very long range you find variation from day to day in the distance that you have to lay those guns for?—I never carried on practice on two consecutive days, where I could use on the two days precisely the same elevation and the same length of fuse; you had always to vary them.

20887. Even in this country?—Yes.

20888. The difference of temperature, of course, acts on cordite more or less?—You might get a gun, if it was in the sun in South Africa, very hot, and they had the habit (I do not think it was the right thing) of carrying the guns loaded. However, it was done unquestionably, and some of those curious effects in the guns that we have been utterly unable to reproduce here may have been due to that. But, as a matter of fact, it would make an immense difference between the first and second round. It is perfectly possible that you might get the cordite up to 150 degrees if the cartridge was carried in the gun exposed to the sun, but if it was carried in limber boxes it might be only 70 degrees or 80 degrees, and that would make great difference in range.

20889. I would like to ask you this question. I do not think we have got it quite clear yet; the necessity for a supply of common shell is urged by some of the commanders in the field, that is the military commanders and generals and others in South Africa, but we are told, on the other hand, that shrapnel supplies all conditions essential for modern warfare. Do you concur in that view?—No. If you are firing against a fort or stockade a common shell would be most effective where shrapnel would not be, but for fighting in the open the shrapnel is the more effective.

20890. And the difference of the bursting charge is very great, is it not?—Yes. If you got a common shell into a stockade, the shell being charged with lyddite, it might kill or wound every one in it.

20891. But, of course, not with shrapnel?—No.

20892. (Sir Frederick Darley.) Is the Elswick Battery of 12½-pounder guns the design of your firm?—Yes.

20893. And with respect to the 7·5 gun, is that the design of your firm also?—Yes, we have made a number of them.

20894. Are they your designs?—Yes, they are our own designs; we have made also to a design given us by the Government, but we have made a certain number to our own design.

20895. You spoke of the atmosphere being much less dense, as we know it is, of course, at an elevation of 4,000 or 5,000 feet; does that affect the range very much of the projectile?—Yes, it does affect it.

20896. Take the range at sea level and the range at 3,000 feet above sea level; the difference between the two ranges would be pretty well ascertained?—Yes, it could easily be calculated what the difference would be.

20897. It is a question of the pressure of the atmosphere?—Yes. There is perhaps not a great difference, but at long ranges the laying is sometimes thrown out by refraction, you see the object in a different place from where it really is; you do very often in the hot sun, if there is moisture.

20898. (Sir John Jackson.) Do you get orders for stores during times of peace to any great extent from the Government?—Yes, variable; till late years most of our work has been foreign; perhaps you may judge by looking, at that list of ships; you see the larger number is foreign.

20899. What I mean is that the Government, of course, in the event of war in any emergency must rely to a great extent upon your works; and with a view to assisting you to have larger facilities for manufacture do they give you a fair proportion of their stores required during peace times, or are they all dealt with at the Government Arsenal?—No, we get a fair proportion. We were requested once to expend a very large sum in providing facilities for much longer guns and so on, and so far as I remember we spent £250,000 in plant and building and other things, and that at the termination of that we were getting hardly anything from the Government at all. So far as we were concerned it happened fortunately that just at that time we had a great deal of foreign orders, so we did not suffer so much, but if we had depended upon the Government the shops would have been nearly entirely idle and they were built at their special request. I may say that in the last seven years we have spent 2,842,822*l.* in additions to our producing power.

20900. That is to say, if the Government were giving out more work to private manufacturers during peace times it would certainly encourage the private manufacturers to lay out more capital?—Unquestionably. But then there is another very serious evil, and that is this, that, except for the Navy, most of the Government work is done in about eight months of the year, and that is the cause of the very great and considerable increase of expense. You see, they have had a bad habit in the Treasury, if any Vote is not exactly spent the remainder goes back to the Treasury; it is not carried on, and you are pressed to deliver your stores six weeks or so before the termination of the financial year, and to insure inspection you frequently do not get the fresh orders till six or eight weeks after the termination of the financial year. The consequence is a want of continuity of steady work, which increases very considerably the cost. I may point out—I merely mention it because it is an interesting point—that the range of torpedos has increased so very much that it has become much more important than before to have very high velocities in guns. The consequence of that is that an action will have to be taken at a much greater distance than formerly, and the importance of high velocity has increased so much that it is probable that the newer vessels will be armed with very much more powerful guns.

20901. (Sir Frederick Darley.) Is not the 7½-inch gun a very powerful gun in muzzle velocity?—Yes, the new 7½-inch gun, and also the new 10-inch gun. The muzzle velocity of the 7·5-inch gun is, I think, over 3,100 ft., the 50 calibre gun.

20902. (Lord Strathcona and Mount Royal.) Does your company manufacture small arms—rifles?—Only for machine guns. We make the barrels for a great many small arms.

20903. What is the effective range—the longest range of any rifle at present used?—I think the effective range with a good shot is well up to 1,000 yards. You have an advantage, you see, in artillery, which you have not with the rifle; you can see with artillery where your shell is striking—you cannot see it with a rifle.

20904. (Chairman.) Is there anything you would like to add to your evidence?—Nothing.

Sir Andrew Noble,
Bart., K.C.D.
25 Mar. 1903.

Lieutenant ARTHUR TREVOR DAWSON, R.N., called and examined.

Lieut. A. T.
Dawson, R.N.

25 Mar. 1903. 20905. (*Chairman.*) You are managing director of Messrs. Vickers, Sons, & Maxim?—I am a director and superintendent of their artillery.

20906. We asked you to be good enough to speak to the supply of guns?—Yes.

20907. You would wish to point out that you had opportunities of supplying guns and ammunition to the Government; is not that so?—Yes. I wrote a letter in which I wished to represent that during the war we were instrumental in supplying a very large amount of artillery, and that amount is also attached to my memorandum. What I wish specially to represent now is that had we been in a better position, through having the necessary machinery for the very large production that was required during the war, we should have been in a far better position to supply quickly, and, perhaps, possibly at a less cost, had we manufactured many of the articles before the war. I would specially refer to the supply of field artillery, in which we were asked during the war to supply an entirely new pattern of which we had never made any of these equipments before, the result being that before we could start the regular supplies to the Government, it was necessary to manufacture all the gauges, jigs, etc., and to get all the machines set up ready for the proper production of so important a store like the quick-firing field equipment, which it was necessary to be in every respect interchangeable. I would like to submit to the Commission that, in connection with the supply of such stores, we should have been in a far better position had we manufactured and supplied such stores before the war. This consideration, I think, bears on nearly every warlike store, and I am sure the Commission will see that for large firms like my own, who are capable of a production of field equipments in every branch, as well as large ordnance installations, such as 9·2-in. guns, and guns of smaller calibre, that if our machinery is kept going during peace time it is very much easier to increase the output, and give greater satisfaction to the Government, if we have been manufacturing the stores before the advent of the war. I have no doubt that during the war the Government found it difficult to obtain their field material at the rate that they would have liked, and I understand for that reason they had to go abroad for material, on account of our being so full up with work that we could not manufacture it. That is perfectly true; but, as I say, had we known what the Government required in the way of field material, and been in a position to turn it out, by having previous experience of the manufacture of such stores as were required, such a state of things would never have existed. And, therefore, I would submit most respectfully to this Commission that during peace time we and other large firms should always have an opportunity of making every warlike store for the Government, manufacturing it not in very small quantities, but in fairly large regular quantities, so as to keep at all events our principal men and foremen continually employed, and in a state of efficiency for producing the work, which would render in time of war our works far more valuable to the Government. In fact, I would respectfully submit that such works as my Firm's would really add to the country another arsenal, capable of producing every warlike store necessary, and capable of assisting the Government in time of war with very rapid production to make good deficiencies which must occur, owing to the very large expenditure of ammunition and the wearing out of material during such times.

20908. Did you make warlike stores for the Government before the war?—Yes, we had very large orders, for Naval stores principally, and for a large number of heavy guns, but in connection with field artillery, although we had been supplying it to foreign countries for some considerable time, we had never received orders from the Government at all for field guns, except experimental equipments, before the war.

20909. You did supply field artillery during the war?—We supplied a very large amount of field artillery, which I mentioned in my statement attached.

20910. You have sent in a statement regarding your

evidence here which you would like to put in?—Yes, I would.

20911. And you have also put in that statement the amount of guns and material that were supplied by your firm during the war?—That is so.

20912. At what date did you begin to supply this material during the war?—Practically at the commencement of hostilities, but more especially after the serious reverses which occurred in Natal.

20913. The list I see is made up of army guns, mountings, etc., supplied during the Boer War, October, 1899, to May, 1902; so those were the dates within which you supplied them?—Yes, those would be the dates.

20914. Had you any notice from the War Office before October, 1899, of a probability of a demand upon you?—We had no notice in regard to a probability of any special demand, only the normal quantity that we get from year to year.

20915. And your point is that if you had had notice you could have adapted your works sooner?—Of course that would be so, but at the same time we should have wanted rather more than notice, because we could never have made the very large expenditure on machines and new shops that were necessary for the production during the time of war unless we had been quite sure that orders would come to us. The position now after the war is of course very different, because we have all the machinery that was necessary for this greatly increased output of nearly every warlike store, and some of that machinery, as well as a large number of the machine shops which we have added to our works, are to a very great extent standing idle. In fact, during the war we utilised our experimental factory at Crayford for the production of a large amount of field artillery of every sort, and the supply of small shells, shrapnel, etc. That small factory enabled us to increase our normal output of shrapnel shell from 2,000 per week to 9,000 per week, and in order to do that we naturally had to increase our machinery, and that machinery is now lying idle, and the workshops are lying idle, in fact the experimental factory at Crayford is virtually closed, there being only enough men to keep the machines in order. I have mentioned in my letter the state of the Erith factory, which, as you know, is bad.

20916. There are two stages of the matter. In the first place, if the Government had foreseen before the war that a large extra demand would have been made upon your firm, and would almost necessarily have to be made upon your firm, it would have facilitated the production if they had given you some previous knowledge of that, because, as you state in your letter, it was necessary for you to expend £7,000 in the adapting your departments?—Yes; that was in connection with the supply of Maxim guns. Our normal output of Maxim guns is 30 per month; during the war it was necessary to increase it to 60, and the extra expenditure of £7,000 was solely for the production of Maxim guns, which, after all, is a very small supply in connection with the whole of the Artillery requirements.

20917. I do not think you quite follow what I want to get at. In a case of emergency when the Government are face to face with a case of emergency, if they can give previous knowledge to a firm like yours they would have much greater assistance from all the powers of production under your command than they will if they do not give previous notice to you?—That certainly would have been the case before this war, but I do not think it will be the case now, because we have all the machinery and all the appliances for the rapid turning out of existing material. Should the Government change the types of materials or should they wish a large production of material to be made of which we have not a manufacturing knowledge and experience then early knowledge of their requirements of course would enable us to increase at a more rapid and efficient rate.

20918. And the state of things now is that you have got these works, and adaptations of the works, but you have got no work to do?—We have really no work. We have not got a sufficient amount of work relative to

our enormous capabilities of output, which, as I say, were rendered necessary by the urgent demands of the Government. I do not know whether I might mention that perhaps the Government could help us very materially indeed by not giving quite such a large proportion of the work to the Royal Ordnance factories, having special regard to the enormous expenditure that we have been put to, and the position we are now in in having these very large extra shops, and the large amount of machinery standing idle. In our case, of course, we had to expend the money belonging to our shareholders, and we are responsible to them that these machines are kept, so far as possible, regularly and effectively employed. With the Government, on the other hand, they might perhaps consider it is only necessary to keep the Ordnance factories as a reserve in time of war specially, and employ such facilities as exist now in the trade for the production of their main requirements, having special regard to the fact that we made such a sacrifice in capital and had to obtain the money from the shareholders for that purpose to meet this urgent national circumstance.

20919. And what would happen supposing you do not get work. I suppose you would have to consider what is to be done with these machines?—Of course that is a very serious question to us. We hope and think that it will be necessary before long to alter the Field and Horse Artillery, possibly to add many more heavy batteries to the Army, and in that case our works would for a moderate number of years be employed, providing always that we received a sufficient number of orders from the Government; a sufficient proportion of that work to enable us to fill our shops. That would help us materially for the moment. But what would help us in the main more than anything would be by giving more work to the trade, so as to enable us to keep our shops going at such a rate as would enable us to pay a fair return on our very heavily increased capital invested.

20920. (*Sir John Edge.*) How long did it take you, when the requirements of the Government necessitated the increase of your works, to bring yourselves up from the normal condition of manufacture before the war to the state of manufacture to comply with the Government orders?—The time varied in accordance with the store to be produced. In the case of the increase to Maxim guns it was done in a very few weeks owing to the machinery necessary being small. In the case of the small shrapnel shells the same consideration applied; it was only necessary to run up somewhat inexpensive constructions at the time in the way of shops, and to instal the machinery as quickly as it could be obtained, the machinery being obtained from anywhere where it could be obtained quickly, to enable the production to be arrived at in a very few weeks. But, in so far as the heavy installations of guns, such as the 9·2-inch and below, were concerned, the obtaining of the machinery was a much longer process, and before we really got into thorough working order in regard to that manufacture it took us, I should say, at least a year. In regard to the production of the small artillery stores a rapid increase could be made quickly, owing to the machines being unimportant, and, generally speaking, being kept in stock by the respective manufacturers of machinery.

20921. (*Sir Frederick Darley.*) What motive power do you employ for these new machines?—In regard to the motive power we employ electricity almost entirely at our works, especially in regard to the new machinery installed.

20922. (*Sir John Hopkins.*) In regard to a demand for stores you have taken into consideration that the demands for warlike stores in South Africa have naturally ceased. That, of course, curtails to a very large amount the stores required that would have been taken from the private firms during the war. Take for instance the shell alone for firing in the field, or projectiles; the demand for them has ceased?—That is so.

20923. Therefore naturally the manufacturing demands would cease also?—But I take it that in time of peace it is always necessary to make up a certain amount of ammunition that is utilised for practice purposes, of which I presume there is a good deal. In so far as the Navy is concerned it is a considerable amount, of course, and in regard to the Army it is also considerable. Therefore, there always exists a certain demand for stores which would give us a certain amount of work for the employment of these machines now that the war is over. I

would like to say in connection with the supply of stores which were ordered during the war that we supplied them practically at our ordinary prices; we made no increase over the ordinary prices, excepting where it was absolutely essential, owing to the increase in the cost of material and the special increase of production due to working very exceptional overtime.

20924. Yes, that is so of course, but the demand for these stores must have necessarily ceased to an enormous extent. All the projectiles that were fired away in South Africa, and guns to replace other guns, and so on, that is at an end now, and that would considerably modify the orders given to you. Are you back to your normal?—By no means; we are much under the normal. The actual orders we have received in connection with small artillery are far less, and our works are far less employed in connection with that particular class of work.

20925. Yes, I think that is natural, because as you know (nobody knows better), they are bringing out a new field arm?—Exactly.

20926. Therefore all supplies for the former Artillery have probably ceased?—That I cannot say, because I only know what orders have been placed with my firm. I do know that large orders were placed during the war with other firms, and perhaps a distinction should be made between the supply of Ordnance by such firms as my own and possibly Armstrong's, who supply artillery in every stage, and make complete armaments for arming ships and fortresses complete, and are always ready to supply designs of every store in competition for general consideration by the Government. There are firms who only supply one class of store, necessitating possibly only cheap machinery and no very expensive staff, and certainly not requiring a real staff of designers. Such manufacturers could and did in time of war manufacture a very large number of shrapnel and stores such as that, but they have not got the same expensive staff to keep going that we have who supply everything complete, and that being so I think a difference should be drawn between such firms as ours who, as I mentioned previously, are really capable of giving to the Government an additional arsenal in which they will have the absolute control and right of every supply that is made in time of war. We, of course, feel the slackness of orders for war material much more perhaps than the smaller firms, who only have unimportant machinery and no expensive staff such as is absolutely necessary for the production of war material of the highest classes.

20927. Yes, I quite see all that, but when there has been an unprecedented demand, and you have risen to the occasion and met that unprecedented demand, there is no doubt a re-action will come afterwards; it is bound to be so?—That is why I make special reference to the possibility of the Government allowing such a re-action to be felt more by the Government factories, where the loss is for the whole of the country, whereas in our particular case, where you say we rose to the occasion during the war, and we spent our money to meet an urgent National demand, I submit that we may consider perhaps that our position is one that should receive special consideration from the Government.

20928. I quite see your argument.

20929. (*Sir John Jackson.*) Did you get any special prices for what you supplied during the emergency of the war, or only your regulation prices?—We obtained the regulation prices plus, in some cases, an amount to cover the actual additional expenditure which we were put to in regard to working overtime and owing to the increased price of materials; but we were specially careful not to put on special prices for the Government during the war, because we felt that such a procedure would be to some extent unpatriotic. Our Maxim guns were supplied at the ordinary price.

20930. If the Government were giving you a fair proportion of their orders during peace times, would your firm be prepared to come under an obligation not only to place your factories at the entire disposal of the Government in the event of an emergency, but to keep the charges down to the ordinary peace time charges?—I would say that my firm is quite prepared to do that, and we would be also prepared to give the whole production of our factories for the use of Government at prices which should compare in war time with prices in

Lieut. A. T. Dawson, R.N.

Lieut. A. T.
Dawson, R.N.
25 Mar. 1903.

peace time, excepting that should we have to make special extra additions to machinery, or should we have to pay very much increased charges for material, or should we have to work very much more overtime than is usual, during the meal hour and such times as that, then we should have to ask Government to pay an addition which we should be quite prepared to calculate on the basis of cost price plus a fair percentage to be added for profit, say 10 or 15 per cent. I may say in connection with some of the Admiralty work that we resort to that procedure now, that is to say, charging cost plus a percentage of profit after the shop charges and indirect charges have been added; and I think the Admiralty find that such a procedure works very satisfactorily.

20931. Of course, in a special emergency like that you would be found to have some extra cost, owing to the extra push?—I think that that extra cost and extra push would be very much less expensive if the Government utilised our factories in times of peace permanently and kept us better employed than they have done up to the present time. We are quite prepared on our part to be in as close touch with the Government as is possible; but, of course, if the Government did give us some form of indemnity in the way of always guaranteeing that we should have a certain amount of work to pay, say a fair interest on our capital, we should be able in time of war to turn out stores much more rapidly, and certainly to prevent the necessity for Government having to go abroad to order stores which possibly are not nearly so efficient as could be made in this country.

20932. In the event of an emergency?—In the event of an emergency. Perhaps I might on that question refer to the production of powders which my company has a large interest in—a somewhat indirect interest. At the present time the manufacturers of Cordite and Cordite M.D., are practically producing their powder at cost price, because the competition is so very great for the small orders which are placed with the trade. My firm and the Chilworth Gunpowder Company and the Nobel Company, have powers of production of over 3,000 tons per annum. Therefore such production in time of war is of great importance, and what the powder companies want more than anything is to have in times of peace a fair amount of orders for powder at a reasonable price, instead of the Government factories working, as I believe they now are, on three shifts continuously, in order to keep their prices as low as possible, while the trade is suffering tremendously for want of orders; and for that purpose we think it might be possible, or rather fairer, if the Government manufactured say a quarter of the total supplies required, and gave the other three-quarters to the seven firms at present interested in the production of smokeless powders.

20933. Have Messrs. Armstrong and yourselves your own ranges for proving guns?—We have altogether three ranges—one on the coast of Cumberland, for the proof of heavy artillery, where we are now proving all the 9·2-in. installations which we are manufacturing for the British Government. The range is fully equipped for the proof of every class of gun, mounting, armour plate, and projectile. Then the other ranges are in the south of England, where we prove the machine, rifle, calibre, pom-pom, and other class of small artillery, and we have another range near London, where we experiment with the long range firing of field artillery.

20934. Are these used by the Elswick people as well?—No, I think Elswick have facilities of their own. They have equally good gun ranges as ourselves; I have never seen them, but I have always heard so. We should be quite prepared to do all the proof of guns and mountings manufactured by ourselves. In fact, during the war, I think I may say we assisted the Arsenal considerably, which was in a very busy state, in the proof of 37-millimetre pom-poms, and some other small artillery. I would like to mention, in connection with that question, that I think in time of war the Government would be much assisted by the delivery complete of guns and mountings proved at our works as well as the ammunition, because, if the ammunition is inspected at our works and proved at our ranges, we then can pack it and ship it direct to wherever it has to go, and that I think in time of war might be a very great advantage to the Government, because it would enable them to get their ammunition quicker and

their guns quicker, and would relieve any extra press upon the ordnance factories.

20935. Do the Government authorities ever use your ranges?—They are now proving all the 9·2-in. installations at our range, and we have carried out experiments on their behalf at our heavy gun range, and we are continually experimenting ourselves with armour plate trials, which are directly for the interest of the Admiralty.

20936. (Chairman.) Do you know of any case of a foreign Government having relation with private firms in the way you have spoken to?—In regard to the supply of heavy artillery by Messrs. Krupp in Germany, I believe that they do all the proof for the German Navy at their own range at Meppen, and supply it direct to the ships.

20937. I was referring more to what you have put before us as to the necessity of the Government giving you a fair share, as you call it, of the orders. Is that done elsewhere?—I think that in France to some extent it is done, but I know that in Germany Messrs. Krupp are greatly helped by the Government, as they guarantee to take a very large proportion of the whole of the output of the Krupp factory.

20938. Then you would represent that what you are putting forward as a claim here is not unprecedented?—In no way. I may say, in connection with the production of Maxim guns for the German Government, that they are ordering a very large number, as well as pom-poms, and the whole of the output is obtained from the trade. On the other hand, in this country we really obtain about one-half of the production necessary, but during the war we turned out over 400 guns per annum. Our normal production of Maxim guns is 500 per annum, and I believe this year our allocation of guns will be, roughly speaking, about 100 per annum, something like one-fifth only of the total number that we are able to produce. Unfortunately, the prices for these Maxim guns that we had to supply were, to our way of thinking, very inadequate, and during the war we were obliged to divert a great deal of our foreign trade to Germany in order to meet the increased demand of the British Government. The actual number of guns made, which we were not able to take owing to our having to produce Maxim guns at a rapid rate for the British Government, amounted to 405 Maxim guns delivered to 11 different countries. Our having to divert these orders abroad lost, during the time that we were meeting the exceptional demands for the British Government, £50,000 to my firm. Of course, we got small royalties, but you know that the manufacture of a gun is better than getting a small royalty: you are able to keep your men together and your machinery employed, as well as getting the fair manufacturing profit, which we lost. Another serious result of our having to divert our orders from abroad is that we are not likely to get the business back. I am sorry to say that our experience, after the lapse of time during the war, is that, in connection with Maxim guns, a large part of the foreign Maxim guns are now being manufactured abroad instead of at our works, and we attribute that to a very large extent to our having to place the whole of our Maxim factory at the disposal of the Government, which we did very readily and very willingly, and we hope now that the war is over that those sacrifices that we have made will be considered.

20939. (Sir John Hopkins.) What was your opinion of the Boer pom-poms in the field from what you have heard?—The opinions we have had have been very curious. By some very good officers who have actually been using the pom-pom we have been told that the gun was invaluable—that it was invaluable for scouting purposes and for special purposes in regard to skirmishing, or where there was a chance of being suddenly attacked. The pom-pom, which utilises a projectile weighing only 1lb., cannot be compared with the 12-pounder or 15-pounder shrapnel, the projectile for which is so much in excess of the weight, and a great many officers seem to wish to compare this very small projectile with a heavier one. That comparison is unfair. But there is not the slightest doubt whatever that the pom-pom, properly directed, is an extremely good gun for moving people away from cover, making them run, and, furthermore, for protecting a particular position, like a bridge, or any other tactical important position at which the rate of fire of a pom-pom would be invaluable. I am also told that during the war it was found to

be the very best range finder they had, and I should be inclined to think myself that a pom-pom, worked in connection with rifle calibre Maxim guns having the same range as a pom-pom, would be an exceedingly useful weapon; but to compare the effect and use of a pom-pom with the effect and use of a field gun is unfair, and does not give the gun a chance. Had they been able to have brought pom-poms to the top of Spion Kop on pack saddles, I believe we should never have had to have left Spion Kop. The moment we saw that the pom-pom was an important gun in the field, we set to work and made an equipment so that the pom-pom could be carried on pack-saddles and be moved to positions which otherwise would be impossible to get to with ordinary heavy field guns or heavier calibre guns.

20940. You had orders for the Government for pom-poms in the latter stage of the war, had you not?—We supplied at a very rapid rate a very considerable number of pom-poms.

20941. (*Sir John Jackson.*) I suppose as a matter of fact there are very great advantages in the modern quick-firing gun over the old field gun?—I think that the nation that has not got the modern quick-firing field gun will be very much at a loss as compared to nations with it. The old field gun was capable of an effective fire of about four rounds per minute, and the Horse Artillery gun that we supplied to the War Office, which was tried last summer at Okehampton, obtained a rate of fire on service of 10 rounds in 32 seconds or 19 rounds a minute. As to that I should like to say that other field guns we have made have fired at the rate of 10 rounds in 22 seconds or 27 rounds a minute, and I feel sure that an army without a rapid firing gun will be at a most serious disadvantage in regard to an army with it.

20942. We have had it in evidence, I see that the difference was between four and six to eight; that must be too low for aimed fire?—My reference is in regard to the Government trial, which no doubt can be confirmed, at Okehampton. With a Horse Artillery gun we fired 10 rounds in 32 seconds, or 19 rounds a minute, and I have shown to many officers a field gun known as our "Mark L.," which we have fired at the rate of 27 rounds a minute. I am not going to say that the fuses can all be set from zero to the point at which you wish the shell to burst in that very short time, but it is well known in France where they have nothing but quick-firing guns, that in their wagons which come alongside their guns they have the fused shell set for different ranges; some are set to go off like case-shot, others for ranges varying up to the maximum, so that in case they come across an enemy at a particular range they always have a certain number set very near the range at which they wish to attack, or if the enemy is close they have their shells set to go off very close to the muzzle and act like shrapnel. And with that type of firing with guns which we ourselves have made we can get 27 rounds a minute, and a comparison between 27 rounds a minute and four rounds a minute under those conditions is almost unnecessary to discuss. In time of war you always get a chance at which the very rapid discharge of shrapnel may turn the day, and for this opportunity the rapid fire field gun is all important. It is like a ship, the first few rounds will probably decide the action, and now that foreign armies are supplied with modern quick-firing guns, the army that has not got the modern quick-firing guns had better stay at home. We have been told that the fire of the long range Boer guns was not effective at long range. Can you account for that?—I should say that the guns were not really very modern guns that the Boers had.

20943. I thought they had large modern Creusot guns?—I thought you referred to the field guns. The heavier guns were no doubt modern, and there is no difficulty whatever in getting effective fire at very long ranges. The Germans at the present time use for their heavy guns a fuse burning for 35 seconds which can easily attack up to 10,000 yards and beyond, and not only attack, but attack with great precision, because their fuses are so good that they burst within a very small percentage of error, in the place at which the fuse is set. And that also applies to their field guns in which they have the 22-second fuse, and which burst with an absolute precision, for covering the advance of Infantry, and with no variation to speak of at all!

20944. So that your suggestion is that if these big guns have been inaccurate it has been mostly owing to their not having satisfactory fuses?—I should say that had a very great bearing on the effect of the Boer fire. *Lieut. A. T. Dawson, R.N.* 25 Mar. 1903.

20945. (*Sir Frederick Darley.*) With respect to the Government Arsenals, can the Government produce the ammunition of war cheaper or as cheaply as it can be produced in private establishments, such as yours or Armstrong's?—I should say that the cost of production in the Government Arsenal and in private firms would be practically the same in both places. On the other hand it is not fair to compare the price as scheduled in the official catalogues of the Government stores with the private stores, because the Royal Arsenal has its land free of charge and has not to pay interest on capital; that is not taken into account in the schedule of prices; and so the actual prices as scheduled cannot be compared with the trade prices. Of course, the trade have other considerations, such as bad debts, and having to pay a certain amount for obtaining orders, and then of course there is the element of profit that must come in; but speaking generally I should say that the Government really obtain their stores at about the same price from the trade as they do from their own Government factories. In fact, I may say that in connection with some stores I think it will be borne out that the trade supply cheaper than the Ordnance Factories.

20946. You spoke of charging cost price and a profit. I suppose in estimating the cost price it is material, wages, and rent of machines?—What we should prefer to do in a case of that sort would be to take wages, materials, plus an indirect charge for the rent of machines, and a general charge, which is a well-known thing in a factory, over that total, and then we should have to put on profit. That consideration, I think, would be the same in Government factories.

20947. But in the Government factories they would not charge a rent for machines in the schedule of prices?—Because they have not paid anything for the machines, but it belongs to the country, and the country has had to supply the money really.

20948. In the quick-firing guns how is the enormous quantity of ammunition required for them provided in the field?—That is provided by having enough wagons and limbers with the gun equipment as will be reasonably necessary for the service on which the guns are employed.

20949. You could not possibly carry it in the limbers?—You could not possibly carry it in the limbers. Every quick-firing modern gun requires a certain number of wagons and limbers attached to it to move with the general equipment.

20950. To be, in fact, alongside the gun or close to?—To be brought up to the gun when it is wanted. In the French quick-firing Artillery they bring the wagon right up to the gun and leave it there. The wagon really forms a sort of shield, and the men who are taking the ammunition out of the wagon supply it to the gun practically under cover of their own wagon, which is protected by steel plates, and in that wagon the fuses are set to various distances so that the moment they come up to the firing point they find the range and take the shrapnel shell nearest to that range and set it as quickly as they can; and they practically supply the ammunition at the necessary speed to come somewhere near the speed of the gun. Of course, the maximum speed of the quick-firing field guns would only be necessary when attached by Cavalry or taken by some surprise or possibly finding troops in a position which you would want to direct the whole force of your Artillery at the greatest possible rate. I think certain occasions arose during the late war in which that very rapid rate of fire might have been most successful to our own troops, where they found the Boers suddenly and wanted to direct their whole force of Artillery on to them.

20951. Was any inconvenience found from the great heating of the gun in quick firing?—I have seen a very large number of rounds fired from a field gun, 300 and more at a time, without stopping, but the effect is unimportant. I do not know what would happen if you went on to a thousand, but that hardly comes into real practice.

Lieut. A. T. Dawson, R.N. 20952. Up to 300 rounds you have not found any inconvenience?—No. I myself do not see why you should not go on firing a great many more rounds than that. What really happens is that the chase, which is the thinnest part of the gun gets the hottest, but where

the cartridge goes this part does not get nearly so hot owing to the thicker mass of metal around it.

20953. (*Chairman.*) Is there anything else you would like to add?—I think I have brought out all the points I wished to.

APPENDIX TO THE EVIDENCE ON LIEUTENANT ARTHUR TREVOR DAWSON, R.N.

Letter.

LETTER referred to in the foregoing evidence.

Bernard Holland, Esq.,

Secretary of the Royal Commission on the War in
South Africa,
St. Stephen's House,
Victoria Embankment, S.W.

Sir,—With reference to your favour of the 23rd ultimo, I have the honour to enclose for the Committee's information a list of Army material supplied by my company to the War Office during the Boer War, from October 1899 to May 1902, together with details, etc., of the same.

The very large production of material to meet the British Government requirements necessitated a great increase in machinery, plant, tools, etc., to enable us to carry out the demands, and, in connection with the supply of Maxim guns alone, it was necessary to spend some £7,000 in this department, for the purpose of increasing our output from 30 guns to 60 guns per month.

As an example of the amount of capital which it was necessary to spend in order to meet the very heavy demands, it will perhaps be of interest to the Committee to know that my company's expenditure on new machinery etc., during the last five years amounts to:—

Barrow-in-Furness	-	-	-	£1,465,472
Erith	-	-	-	283,570
Sheffield	-	-	-	492,408
				£2,241,450

I would point out that this enormous expenditure of capital was primarily for the purpose of putting our factories in such a state of preparedness that, should any future occasion arise when large amounts of ordnance stores would have to be produced, we should be capable of meeting the demand without serious undue strain. The necessity under which the British Government found itself of placing orders abroad to meet the urgent demand for stores would, we believe, in the future be avoided, owing to the heavy sacrifices my company has made by the expenditure of capital for the purpose of putting their works in a state of thorough efficiency to meet urgent requirements.

Notwithstanding the very large amount of machinery which my company have put down, I regret very much that the Government is continuing to extend the Ordnance Factories, as, according to information contained in a report in "The Times," Colonel Bainbridge uses the following expressions:—

"Now that the War was over it might have been expected that the output would have considerably decreased, but new territory has been added and modern machinery had been given them with no niggard hand in order that they might prepare the organisation for that expansion whenever pressure, which might arise at any time, was put upon them."

We trust, however, that this very large expenditure of capital on the part of my company will have the sympathetic consideration of the Government, and whilst we are sure that the consideration exists in the minds of the chief officers of the departments, my firm would esteem it a favour if these circumstances could be strongly represented to the Government in order that such expenditure of capital should be, if possible, rendered productive of profit now that the War is over, and who, notwithstanding the fact that they spent their capital freely to meet the urgent wishes of the Government in the time of emergency, are now at their wits' ends to keep their men and machines employed.

It would perhaps interest the Committee to know that

at our Erith works alone, during the War, our weekly wages cheque was for £7,000, whereas to-day it is within £2,800. Our factory at Crayford, for the manufacture of field material for Maxim guns, and which was to a large extent instrumental in admitting of our greatly extending our deliveries during the War, are entirely closed for want of work. During the War these small works helped in enabling us to increase our output of field artillery shrapnels from 2,000 to 9,000 per week, and to greatly increase our production of field material and Maxim guns.

In regard to the Erith factory, at the present time we have some 1,505 machines in the factory, and of this number 616 are standing idle, and some of the remainder are only being worked half time.

In connection with the supply of land service material, I would represent that with our present plant our production is as follows:—

9·2-in. or 10-in. garrison guns and mountings, complete with full equipment of ammunition, at least 24 equipments per annum.

7·5-in. garrison guns and mountings, complete with full equipment of ammunition, 30 equipments per annum.

6-in. garrison guns and mountings with full equipment of ammunition of every class, 100 equipments per annum.

Heavy howitzer equipments, such as 4·7-in. and 5-in. guns, and guns of position, with wagons, limbers, ammunition, etc., 24 complete batteries per annum.

12-pounder and 18-pounder gun equipments, with wagons, limbers, ammunition, etc., 30 complete batteries per annum.

R.C. Maxim guns, complete with mountings, appurtenances, etc., 500 equipments per annum.

Pom-poms, with full equipment and 30,000 rounds of ammunition for each gun, 200 equipments per annum.

This output does not include our enormous powers of production of sea service artillery, hydraulic, and electric mountings, etc., and in considering this production it should, of course, be understood that any particular nature of store could be increased, providing a proportional decrease is made in some other equipment.

Considering the enormous powers of production which my company's own works now have, it would seem that providing during peace time we are supplied with orders for every class of store which it is likely might be necessary to be obtained in a hurry during war, there is little likelihood that in future so large a quantity of material would have to be ordered from foreign countries. In order that warlike stores may be turned out quickly in an emergency it is necessary for the firms to have ready the necessary jigs and gauges for their production, and that, to some extent, their manufacture should be organised for quick supply.

I think I am right in saying that such firms as Messrs. Armstrong, Whitworth, and Company, and Messrs. Vickers, Sons, and Maxim are capable of entirely arming fortresses and artillery equipments of every kind, as well as ships, complete practically in every respect, at their own works. Furthermore, it is of course understood that such firms are prepared to come to an arrangement to place their manufacturing facilities exclusively at the command of the Government in time of war or emergency. In return for these facilities it would seem only right that some special consideration should be given in peace time to enable the staff and machine shops to be kept running in such a manner that a fair financial return should be possible.

Had my firm received orders previously for the supply of 12-pounder and 15-pounder field equipments complete to Government designs before the War, there would not have been the great delay there was in the preparation of the necessary special tools and gauges, which in itself caused serious delay, and furthermore, it is

probable that the shops would have been in a position to have dealt with the work in a quicker and more satisfactory manner.

I have the honour to be, Sir

Your obedient servant,

A. TREVOR DAWSON.

(After a short Adjournment).

Major-General Sir EDWIN COLLEN, G.C.I.E., C.B., called and examined.

20954. (Chairman.) You have had a long experience of the Military Department in India?—Yes.

20955. And you were Military Member of Council at the time the Indian Contingent was sent to South Africa?—Yes.

20956. We have had before us the correspondence which took place between the India Office and India in regard to the details of the arrangements for sending out the Contingent, but we should be very glad to hear from you what you have to say with regard to the arrangements which were made and the manner in which the Contingent was sent out?—There were various communications which passed between the Secretary of State and the Viceroy previously to the dispatch of the troops with regard to the preparation of the troops and their equipment in case their dispatch was necessary. The instructions given were that the shipping was not to be taken up until final orders were received, and these were sent to the Government of India on the 8th of September, 1899.

20957. When did you first hear of the preparations?—It was some date in August. Meanwhile, before the final instructions were received, a scheme for the organisation of the Force was drawn up in the Quartermaster-General's Department, under instructions from the Government of India in the Military Department. Those instructions were given on the 16th of August. I had various conferences with the Commander-in-Chief, Sir William Lockhart, during that time, and with the chief officers; and, of course, knowing what was going on, I had privately warned the Director of Marine that a call might be made upon him to take up shipping. And after the scheme for the organisation of the Contingent had been drawn up a copy of it was sent to the Director of Marine. Those were the preliminary arrangements which were made.

20958. Up to that date in September?—Up to the 8th of September.

20959. And was the composition of the Force settled from Home or did you settle it in India?—As a matter

Major-
Gen. Sir
E. Collen,
G.C.I.E., C.B.

Major-
Gen. Sir
E. Collett,
G.C.I.E., C.B.
25 Mar. 1903.

of fact it was suggested from Home; that is to say, it was suggested that we might be able to send an Infantry Brigade of four battalions, a Cavalry Brigade of three regiments, and a Brigade Division of Artillery of three batteries; and that was accepted by the Government of India.

20960. You accepted that as a Force which you could spare from India at that moment?—Yes.

20961. (*Sir George Taubman-Goldie.*) Was there any question as to the safety of diminishing the Forces in India?—Yes; we said that a certain risk might be incurred in removing a considerable portion of the British garrison, but that we thought the risk under the circumstances should be run.

20962. It was not to be advocated as a general rule?—No, not as a general rule; but I think circumstances might arise in which the Government of India would be quite justified in sending a portion of the British garrison to the help of the British Government.

20963. Only you would prefer a system under which the Empire could defend itself without calling upon India?—Yes, certainly.

20964. (*Chairman.*) At what date did you warn the troops for service?—We actually warned the troops for service on the 7th September. It was the day before we received instructions; they were not ordered to be mobilised, but simply warned that their services might be required.

20965. And you ordered them to mobilise after that date?—Yes, the day after we received instructions, on the 9th September.

20966. Up to that date you had done nothing with regard to transports, except privately to the Director of Marine?—No, we had done nothing as regards transports except to inform the Director of Marine that they might be wanted.

20967. Perhaps you would inform the Commission how transport is taken up under the Military Department in India?—Certainly. But may I just complete what I have said by mentioning that the date on which the troops were actually ready was from the 11th to the 14th or 15th September, that is, they were ready at their stations to move.

20968. Three or four days after the notice?—Three or four days after the notice. With regard to the arrangements for the transports they were taken up at Bombay by the Director of Marine, Captain Goodridge, and at Calcutta by the Deputy Director of Marine, Captain Gwyn. At the time the monsoon was not over, and there were very few vessels really in port, and most of those either had cargoes on board or were discharging cargoes. If we had had all the vessels ready in port I think the dispatch of the troops might have been effected at an earlier date; but by very remarkable and extra ordinary work on the part of the dockyard and of the staff, who worked from seven in the morning till midnight, the vessels were got ready. Taking as an example the Bombay Dockyard, the orders were received by the Director at 1 p.m. on the 9th September; the "Secundra," one of the vessels chartered, was inspected the same day, and having been fitted and coaled and surveyed she left on the 17th with a field battery and a Veterinary Field Hospital. Again, taking Calcutta, the Dockyard there received the order on 9th September, and the "Purnea," which was then discharging cargo, was moved to the troop jetty, coaled on the 11th, fitted on the 11th to the 15th, finally surveyed on the 17th, and embarked the 2nd Battalion King's Royal Rifles on the 18th. Altogether 22 vessels were taken up, 18 in Bombay, 13 of them being horse-ships, and four in Calcutta, two of them being horse-ships. The ships were all sent off in 16 days.

20969. The horse-ships would take longer to equip probably?—Yes, in the way of fittings.

20970. Had you the fittings in store?—We had large numbers of the fittings in store, of course not enough for the whole of the ships, but still the reserve store that we had, enabled the procedure not to be retarded.

20971. You said with regard to mobilisation that the troops were ready to move at their stations within three and four days after the notice was given to them?—Yes.

20972. Is that about the time you would be able to

reckon upon for the mobilisation of any unit?—It would depend very much upon the number of units you had to mobilise, because if there are a very large number the provision of transport both pack and wheeled would take a longer time; but the actual completion of the unit with its equipment and stores, most of which it has in its possession, would not take a longer time than three or four days.

20973. As compared with Home mobilisation, that is because the troops in India are practically on a war footing?—As to the strength they are.

20974. And as to stores?—Yes, and as to equipment undoubtedly.

20975. The regiment is equipped?—Yes, it is ready; it receives certain stores but only minor details. May I say that I thought of explaining later the mobilisation plan if the Commission desire it; the regiment has its equipment at a particular station as a general rule; but there are exceptions to that rule.

20976. Then within 16 days the first contingent did embark?—Yes, in succession.

20977. Can you give us the actual numbers of that contingent?—The actual numbers were: 259 Officers, 1,564 Cavalry, 653 Artillery, and 3,427 Infantry; the total being 5,903.

20978. (*Viscount Esher.*) How soon were they replaced?—That is rather a difficult question to answer, because additional troops were sent from India, and certain numbers were brought back. They certainly were not replaced during the war.

20979. (*Chairman.*) Additional troops were sent at later periods?—Yes.

20980. To what extent?—My figures are from the Adjutant-General's Return of the 11th of July, 1902. From the 11th of October to the end of July, 1900, 132 Officers, 713 Cavalry, 376 Artillery, 670 Infantry and Mounted Infantry, total, 1891, were sent from India; and then from the 1st of May, 1901, to the 31st December, 1901, 108 Officers, 1,206 Cavalry, 2,543 Infantry and Mounted Infantry, a total of 3,857 were sent, making, with the previous total of 5,903, a grand total of 11,851. During that period troops were sent back to India, but I am sorry to say I have not the actual record.

20981. (*Viscount Esher.*) But was it anything like an equivalent number?—I mean sent back from South Africa.

20982. I only asked you the question because you originally stipulated that when you spoke of the risk, that that might be incurred up to the end of the year?—Yes, that was rather a pious intention.

20983. (*Chairman.*) But to what extent, generally speaking, roughly speaking, were troops sent back during that period from South Africa?—I should think perhaps between 3,000 and 4,000 during the whole period.

20984. That would leave you with about 7,000 or 8,000 troops diminished garrison?—Yes.

20985. There were non-combatants who went with this force?—We sent at different times 469 native soldiers as non-combatants and 5,846 native non-combatants; and then again, later we sent 756 non-combatants; this was up to April, 1902. That came to 7,071. The native soldiers were sent as non-combatants to help in the remount depôts, and to act as orderlies. In that number of native non-combatants there was a transport corps about 500 strong; that was sent in January, 1900; and a bheestie, or water-carrier corps 1,000 strong sent in March, 1900, and a corps of Syces 1,000 strong in March and May, 1900; and there was also a very useful corps of Dhubies, or native washermen, sent in May, 1900.

20986. Did the force take horses with them?—The force took their horses with them.

20987. The Cavalry took their horses?—Yes.

20988. But, I suppose, for remounts, they depended upon the service there?—Yes; but we sent a considerable number of horses from India to South Africa apart from those that went with the contingent. We sent 6,761 up to the 15th of June, 1900; I am not quite sure whether others were sent after. They asked us for 2,000 horses for Mounted Infantry on December 23rd, 1899, and the first batch left India on January 8th, 1900. The horses

were drawn from native Cavalry Regiments, and they were also given by native States with great loyalty and generosity. The Maharaja Scindia, for instance, gave 300 Artillery horses, and other States, like Mysore, Hyderabad, and Jodhpur, and the Punjab States, each sent a contribution of horses.

20989. What class of horse?—They were chiefly country bred and Arabs.

20990. A good class of horse?—Yes, they were all very carefully inspected.

20991. Do you know how the horses of India stood the climate in South Africa?—I believe they stood it well. With regard to the Australian horses sent from India, I think there is rather conflicting evidence; I am not certain; I could not speak on that subject.

20992. Did the force take its transport to any extent?—Only the regimental transport.

20993. Does that mean both lines of regimental transport?—It means in India the transport for ammunition, entrenching tools, *pakhals* or water bags, and small medical requirements.

20994. Nothing to do with supplies?—Nothing to do with any quantity of supplies.

20995. Does the organisation of regimental transport in that respect differ in India from what is understood to be regimental transport in this country?—I think the expression regimental transport means the same thing in India as in England, but, the details are somewhat different.

20996. You are, no doubt, aware that there has been a discussion with regard to regimental transport, and the value of regimental transport, as a consequence of the war?—Yes.

20997. And our attention has been directed to the difference between the first line of regimental transport, which is what you have spoken to, and the second line, which means the first provision supply of the regiment. Does that also exist in the regimental transport in India?—A great deal of discussion has also taken place in India on this subject. At one time nearly the whole of the transport of the Indian Army was regimental, but within the last few years, when I was Military Member of the Council, we introduced the system of corps transport, and a system of detaching transport from the corps to be with regiments—that is to say, a military corps of transport that furnished the regimental transport.

20998. That means keeping up a cadre of corps transport in peace time?—Not only that, but we keep up corps of transport, and cadres which can be expanded and become full corps of transport.

20999. That means a separate organisation, separate from the regiment?—Entirely; in fact, it may be said that, so far as the regimental transport is concerned, it no longer exists, because the idea is to detach a troop or half troop to the regiment, with which it remains so long as it is required.

21000. And you regard that as the better system of the two?—On the whole I regard it as the better system of the two. As I stated, in India, during the discussion of the subject, I should prefer to have both systems, if I could. I should like to have the regiments fully equipped and to have a large corps transport; but it is impossible, with due regard to economy, to keep up both systems in times of peace; and, therefore, I would much rather have the large and expansive organisation of corps transport than merely regimental transport, recognising that the regimental transport is really the easiest transport that there is to organise, because you have the officers, non-commissioned officers and men, whom you can employ directly you hand over a certain number of animals and equipment to them, and carts, and so on; whereas corps transport, which is absolutely necessary for the supply of troops generally, is a very difficult thing to organise.

21001. It is said that the interest taken by regiments in regimental transport is an argument for maintaining that system: do you have that view?—I do not think we have that experience in India, except, perhaps, in the case of special corps, like those of the Frontier Force; and we consider that, under the new system, quite as much interest would be taken in the transport by the regiment, knowing how the regiment depends for its mobility and efficiency on the transport under the corps system.

21002. Under the corps system you must have a sufficiency of officers to detach in this way with the separate regiments in charge of the transport?—We have not a large number of officers in the corps transport; they detach certain portions of that, and possibly only native non-commissioned officers would go to the regiments. There is a regimental transport officer told off at the time.

21003. From the regimental staff?—Yes, from the regiment.

21004. And that, you think, will work well?—I think from all I hear the system works admirably in India.

21005. Has it been tested on service?—No, it has not, except, I think, in China, where it was partially tested, and there it answered well.

21006. Then you said you were going to speak to the equipment and stores that were sent to South Africa?—May I mention the subject of mules and ponies?

21007. If you please?—We sent 1,280 mules and ponies up to the 15th of June, 1900, and 340 Burmese ponies for the Mounted Infantry from that province.

21008. Were the Burmese ponies specially suited for Mounted Infantry?—Yes, I think they did very well. They were rather small sometimes for the very heavy weights.

21009. Now on the subject of stores, what have you to say?—There were large quantities of stores and equipment sent with the troops and with the Ordnance Field Park and Hospitals, with the Field Veterinary Hospital, and also subsequently and separately. I think that if it had not been for the amount of small-arm ammunition we sent with the Ordnance Field Park and the gun ammunition we sent and the supplies we sent for the hospitals, and generally with the Force, the situation at Ladysmith would have been much more precarious than it was. We always send with Indian Forces beyond sea a very large supply of stores and equipment of all kinds. But in addition to the ample supply sent with the troops we sent to South Africa from India, saddlery, field veterinary chests, signalling lamps, fuses and tubes, helmets, warm coats, blouses, and numerous articles of clothing, 45,000 jhools or coverings for bullocks, 200,000 pairs of boots, and some 16,000 sets of saddlery from the Government Boot Factory, which is in charge of Messrs. Cooper, Allen and Company. We also sent reserve supplies of three months with the troops, and one month's supply for horses and mules, and large quantities of medical comforts. Some little difficulty was caused by the War Office not having sufficient and precise information on the subject of Indian equipments and organisation, especially in connection with the Ordnance Field Park and the hospitals and veterinary equipment. Then it was said at first that no followers were to be sent, and no transport was to be sent except for regimental ammunition, but we explained that the regimental transport that we proposed to send would provide for ammunition, medical panniers, signalling equipment, and entrenching tools. There was also some question as to whether full hospital equipment and the Ordnance Field Park and veterinary hospital should be sent, but it was ultimately decided that they should go. We sent a larger quantity of ammunition than the ordinary War Office scale. I think that the whole discussion rather shows the necessity for full information regarding India being available at the War Office.

21010. It was not so before the War?—It was not so before the War.

21011. (*Sir John Edge.*) You sent a greater number of rounds per gun, did you not?—Yes, we did; we sent 500 rounds instead of 350.

21012. (*Chairman.*) Is that all you wish to say about the equipment and stores?—Yes.

21013. Are there any special features of the Indian Army Administration to which you would refer?—I think I can briefly indicate the special features of the Army Administration in India if it would be of interest to the Commission.

21014. If you please?—In the first place, the Viceroy and Governor-General in Council is the supreme head of military affairs. The Military Department of the Government is the Central Office of Army Administration, and the military member of Council is in charge of it.

Major-
Gen. Sir
E. Collett,
G.C.I.E., C.B.
25 Mar. 1903.

Major-
Gen. Sir
E. Collett,
G.C.I.E., C.B.
25 Mar. 1903

All the matters which have to be referred to the Viceroy and Governor-General in Council pass through this bureau, which has a secretary and a staff of Deputy and Assistant Secretaries and some 80 to 100 clerks. The actual command of the Army is vested in the Commander-in-Chief and he is assisted by the Departments at Army headquarters. Thus it may be said that there are two leading military authorities in India, the Commander-in-Chief and the Military Member of Council. The former is the executive commander, and the latter what one may call, perhaps, the administrative agent; both are members of the Viceroy's Council. Then following out this division of work under the military member of Council and the Department of which he is in charge there are the following: the Ordnance Department, the Supply and Transport Corps, the Military Works Services, the Military Accounts Department and the Army Remount Department. The Military Member of Council is also responsible for the Royal Indian Marine and the Dockyard, but the Director of Marine is at the head of this service, and is the administrative chief. Each Army Department in India has a chief who is responsible for its administration and for carrying out whatever work it may have to perform.

21015. (*Sir George Taubman-Goldie.*) Is the Medical Department represented at all?—The Military Medical Department is under the Commander-in-Chief. I was first dealing with the Departments which are under the Military Member of Council. The Military Member of Council is responsible for Army Finance, and through the agency of the Military Department or Secretariat for laying all military questions before the Viceroy and his Council. Then under the Commander-in-Chief there are three chief officers: the Adjutant-General, the Quartermaster-General, and the Principal Medical officer. Under the Adjutant-General there are the Inspectors-General of Cavalry, Artillery, and Volunteers, the Judge Advocate-General, the Principal Veterinary officer, the Director of Military Education, and the Inspector of Gymnasias; and under the Quartermaster-General in India are the Intelligence and Mobilisation branches. I do not think I need elaborate this description any further except to say that as regards the supreme Government and Army headquarters, the leading principles of the Central and Supreme Military Administration are the distinction between the business comprising the work of the Army Administrative Departments, including Finance, and the executive command of the Army; and the responsibility and direct control exercised by the heads of departments over their own work. There have been naturally, in the course of years, many changes, but the leading principles of the Army Administration in India have, I think I may safely say, remained the same throughout a very long period.

21016. (*Chairman.*) One moment. Did you mention the Commissary General-in-Chief?—I mentioned the Supply and Transport Corps. He has now changed his title and he is now Director-General of Supply and Transport.

21017. That is under the military member?—Yes.

21018. I knew him as Commissary General-in-Chief?—Yes. I did not mention the heads of departments, but I might say that the head of the Ordnance Department is the Director-General of Ordnance. The head of what was known as the Commissariat, and is now known as the Supply and Transport Corps, is the Director-General of Supply and Transport. The head of the Military Work Services which used to be known as the Military Works Department is now called Director-General of Military Works, and the Military Accounts Department has as its chief the Accountant-General, who is an officer also of the Military Department, and the Army Remount Department has a director at its head.

21019. (*Sir George Taubman-Goldie.*) There is just one question that I would like to ask on the Quartermaster-General's Department of Intelligence and Mobilisation; it is a purely thinking Department. Has it any administrative work?—No, it has no administrative work. The two branches, of course, are distinct.

21020. Quite distinct; but there is no administration; it is planning and scheming?—They gather up the information and apply it in the preparation of various schemes and proposals. Then passing on from the

Central Administration, India is, from the military point of view, divided into four great compartments of Commands, Punjab, Bengal, Bombay and Madras. And Burmah is about to be made a separate or fifth Command. Each of these has, at its head, a Lieutenant-General commanding the forces with a military and administrative staff, including the Controller of Military Accounts, who acts as his financial adviser, and I think I may say that the keynote of the whole system is decentralisation. The Lieutenant-Generals have considerable powers; they have to carry out their duties on the general lines laid down by the Government of India and the Commander-in-Chief, but the detail work is in the hands of the Lieutenant-Generals commanding. I may say that a further progress in decentralisation is to be looked for, because before I left India certain proposals were made which have been further elaborated, and though I have not heard (not being in office now) of the state at which the business has arrived, I should hope that there was every probability of decentralisation going even further than is actually the case according to regulation at the present moment. I think that the Chairman is acquainted with the fact that the discussion has been going on for a good many years. Perhaps, before I conclude this portion of my evidence I might say that I think that one of the great difficulties, and almost dangers, in our Army system, is that the Indian and Home Army Departments are not organised on similar lines. Of course, it is impossible that you can have exactly the same organisation of a great Supply Department identical in England and in India, in the Home Army and the Indian Army, but a great deal could be done in my humble opinion to bring them on to the same lines. We have had experience on various occasions when troops from home and from India have been associated, and there has been, I think, a considerable difficulty in working the Departments together, and practically the benefits have not been as great as they might have been if one system had prevailed. In South Africa, at Ladysmith, there were difficulties with respect to the Ordnance Field Park which we sent there, and with regard to the Supply and Transport Corps. If a large body of Indian troops were employed with troops from home these difficulties, which are not so great when it is a comparatively small expedition, would be accentuated. The great advantage would be if you had them organised on the same lines you would have power of reinforcement of the Army departments in the event of any large campaign occurring either in India or in any other part of the world.

21021. (*Chairman.*) You have mentioned the Controllers, have they any connection with the Finance Department?—Yes, they have certain relations with the Finance Department. Although they are not actually in the Finance Department they are responsible with regard to the form of accounts, and for the accounts, to the Comptroller and Auditor General, but in all their military and financial duties they are under the Accountant-General in the Military Department.

21022. Are they classed as officers of the Military Department or as officers of the Finance Department?—As officers of the Military Department, not of the Central Military Department but of the Military Accounts Department as an Army Department; it is classed as an Army Department and is staffed very considerably with officers drawn from the Army.

21023. Do they correspond with the Army Pay Department at home?—Their subordinates do, but controllers have a special function because they are practically the financial administrators and auditors of very large bodies of troops, there being one for each great Command.

21024. It was because I thought they had special functions that I asked the question. Perhaps you would explain exactly how they stand in that matter?—In each great Army Command in India, these four or five Commands which I have specified, there is a Controller of Military Accounts, although probably in the fifth or Burmah Command, which is about to be made, they will not employ an officer of so high a standing as a Controller. The Controller, besides being the financial adviser of the Lieutenant-General commanding the Forces, is at the head of the audit and accounts of the whole of the troops in the area of the Command. Under him there are a certain number of officers of the Military Accounts Department

Major-
Gen. Sir
E. Collett,
G.C.I.E., C.B.
25 Mar. 1903.

21025. Civilian officers?—No, military, and a few drawn from the subordinate ranks who are civilians.

21026. Is the Controller himself a military officer?—Yes, the whole of the officers of the Military Accounts Department are drawn from the Army, but within a comparatively recent period certain members of the Subordinate Accounts Service have been promoted to the higher ranks. Then under the Controller there are all the various officers of account and audit, the pay branches, and audit branches for supply and transport, the audit branch for the ordnance, and so on, so that he has really a complete staff of financial assistants to help him in dealing with all the accounts and audit of the troops in that particular big command.

21027. (*Sir George Taubman Goldie.*) What is roughly the annual cost of all that control system, do you think?—Do you mean the Controller's offices?

21028. Yes?—I am afraid I cannot answer the question off hand. I could get the information.

21029. Is it a large sum?—Yes, it is a very considerable sum. Before I left India I took up this question particularly of reducing what I thought was the burden upon the Army of the Indian account and audit system, and a Committee was assembled; a Controller, a very experienced officer, Colonel Anderson, was made chairman, and their Report has been rendered and I understand that a great deal of work has been reduced so that the burden upon the Army has been lightened without, as I believe, relaxing any of the necessary safeguards of audit.

21030. But on the whole you consider some such system is advantageous?—Absolutely necessary.

21031. (*Chairman.*) Is there any other matter with regard to the Army administration to which you would refer?—I might perhaps mention that all the appointments in the Army Administration and the Army Departments are filled by officers of the Army, and that constitutes a difference between the Home and the Indian administration.

21032. (*Sir George Taubman-Goldie.*) Apart from the question of transport and the question of control, which you have entered upon, are there any other serious differences between the Indian and English systems. You said that there was a disadvantage in having a difference between the two systems?—They are different in that the working of their Departments is entirely different.

21033. In what main particulars?—It would be a little difficult to detail them, but in their methods of business and in their organisation. I do not think for instance that there is any actual counterpart to what we have in India in the Ordnance Department. We have arsenals which are not only receptacles for stores of all kinds and in which we have all the mobilisation equipment stored that is necessary, and that comes under Ordnance Supply but also a certain amount of repairing and manufacturing power. I do not think that there is an analogous institution in England. Of course you have the great arsenal at Woolwich, but that is a very large manufacturing and storing department.

21034. But in the Commander-in-Chief's Department things are very much the same, are they not, as they are here, only under different names?—No, I think there is a good deal of difference. For instance, here the Quartermaster-General is an officer who is charged with supply and transport, and pay, &c.

21035. I say under different names, but the Director-General of Intelligence and Mobilisation here really fulfils very much the same duties as the Quartermaster-General in India performs?—Exactly, but I mean that the Quartermaster-General at home has different functions from the Quartermaster-General in India.

21036. The Quartermaster-General at home corresponds to the Director-General of Supply and Transport in India?—To a great extent, but in India he has those single duties to perform while we have other men at the heads of the Remount and Pay Departments, for instance.

21037. (*Chairman.*) But the Intelligence Department in India is entirely under the Commander-in-Chief?—Entirely under the Commander-in-Chief and under the Quartermaster-General.

21038. You said it was the business of the Director of Intelligence to prepare schemes?—There is no actual Director of Intelligence; there is only an officer, a Colonel,

at the head of the Intelligence Department, who is an Assistant Quartermaster-General.

21039. And his business is to prepare any scheme for any military operation?—Yes, in this way, that he does it in conjunction with the mobilisation branch. He would draw it up in the rough with all the details necessary, and then the Quartermaster-General, who is the head of both branches, comes in.

21040. And through him it goes to the Commander-in-Chief?—Then it is discussed by the Commander-in-Chief and Adjutant-General, or any officers who are brought together for the purpose.

21041. And it would be through the Commander-in-Chief that any scheme of that kind would come to the Government of India?—Yes, through the Commander-in-Chief; it would be submitted by the Commander-in-Chief to the Government of India.

21041*. Through the military department?—Through the military department.

21042. And thereafter for discussion in Council?—And thereafter for discussion in Council. But there is one stage which perhaps I may have omitted, and that is that the General Mobilisation Committee might be assembled possibly to discuss some particular scheme; it has not always been done, but it might be done.

21043. Is that a body that exists?—It is a body that exists. I may give an example. In the winter of 1899–1900 Sir William Lockhart was ill and was unable to take the matter up, but with his consent and concurrence, I assembled the Mobilisation Committee in Calcutta to discuss various important questions which were then pending, and to make certain proposals with regard to the defence of India. We sat continuously for many days; but that was, perhaps, somewhat exceptional.

21044. I do not know whether you would wish to refer at all to any relations with the Finance Department in the administration of the Army?—I have considerable experience of those relations. I think that on the whole the system in India works very well. You have a strong Finance Department to which every proposal of the slightest importance is submitted, and is there subjected to a somewhat severe criticism.

21045. The Finance Department may correspond roughly to the Treasury?—Yes. It is only after often very prolonged discussion that the Military Department, as representing the Army in the Government of India, is able to sanction some particular proposal, say some change in organization. It may happen that the Military Member of Council and the Financial Member of Council cannot agree. The Military Member of Council may, perhaps, be unable to give way. Then the question comes to the Viceroy, as the arbiter, and if the Viceroy so pleases the case is brought up and discussed in Council. In fact we had very large proposals before I left India in 1901 up for consideration involving considerable expenditure, and every one of those was discussed in the Finance Department first, and then between the Financial member and myself, and subsequently in Council. We prepared what I think is a very useful document, a schedule of all our proposals, showing their initial cost, the recurring cost and any particulars that might be necessary as to whether the expenditure would fall on India, that is to say the Indian Estimates, or on the India Office, the Home Estimates. Those schedules gathered up all the proposals which the Commander-in-Chief and I considered should be discussed by the Government as a whole in their relation to the defence and security of the Indian Empire; they were at that time absolutely comprehensive.

21046. But even individual proposals have to go to the Finance Department. For instance, if the Military Department wished to establish a gun factory or anything of that kind it may come from the Commander-in-Chief, or not; at any rate it is discussed in the Military Department, but it has to go to the Finance Department?—Undoubtedly any question involving expenditure.

21047. And it is there fully discussed simply from the financial side of the question?—Fully discussed from the financial side.

21048. And then it is returned to the Military Department?—Yes, it returns then to the Military Department.

Major.
Gen. Sir
E. Collett,
G.C.I.E., C.B.
25 Mar. 1903.

The Military Member of Council, if it is a matter of great importance and he does not accept the conclusions of the Finance Department, can then refer it to the Viceroy, and the Viceroy either gives his decision or remits it for consideration in Council.

21049. But the point I wanted to bring out was that there was full discussion between the two separate Departments of the Government of India, the Military Department and the Finance Department each having its say and each knowing what the other thought upon any individual proposition?—Very full discussion.

21050. (*Sir Frederick Darley.*) Are the Commander-in-Chief and the Head of that Finance Department both Members of Council?—Yes.

21051. So that they can present their views to the Council?—Yes, the Military Member of Council is generally charged, in fact always so far as I know, with presenting the case to the Council. The Secretary is there, he states the case briefly and then the Military Member of Council takes up the question and deals with it, and after the Commander-in-Chief has spoken the Financial Member would be called upon by the Viceroy to speak.

21052. (*Sir George Taubman-Goldie.*) Would that be the course in a case relating to the Commander-in-Chief's Department, such as Intelligence; supposing some more money was wanted for Intelligence, would the Military Member of Council still fight the battle?—Yes, he would fight the battle, but the Commander-in-Chief would be a powerful ally and would represent his own case. Or it might happen that the Military Member of Council might not agree with the Commander-in-Chief.

21053. (*Chairman.*) But it is brought up by the Secretary, who is in the Department of the Government of India, and the Commander-in-Chief is an extraordinary member, he is not the head of a Department?—That is so.

21054. Then you have something to say as regards the plan of mobilisation?—The plan of mobilisation in India is based on mobilisation by divisions. We have, as I explained, the great Commands and we draw the divisions for mobilisation for the field army from those Commands. We gave up mobilisation by Army Corps, because it was not suited to the requirements of the Army in operations which we might be called upon to engage in in India. A division comprises three Infantry Brigades of four battalions each, Divisional Troops, a Cavalry Brigade, Field Hospitals, Veterinary Hospitals, Ammunition Columns, Ordnance Field Park, Field Telegraphs, Survey Party, and Engineer Field Park, so that it really forms a small and compact unit of about 15,000. The mobilisation of Divisions and Brigades is carried out, if possible, from one area, that is one division is taken say from the Punjab, another from Bengal, and so on; but one of the particular features of our mobilisation is that while we have our battalions and regiments and batteries at high strength in peace times our field service strengths are lower. Now the British Cavalry strength in India is 627, the Horse Artillery and Field Artillery Battery, 178, I think; the British Infantry Battalion is 1033; Native Cavalry 625, and the Native Infantry 912 in Bengal and the Punjab, and somewhat lower in Madras and Bombay. The field service strengths are, as I have stated, lower than the peace strengths. We use the reserve of the Native Army not to fill up the battalions going on service, but to fill up vacancies caused by wastage and also to form additional provisional battalions. Then another feature of the Indian mobilisation is that it is by stations: we take such and such a station as a convenient one from which to draw troops for mobilisation, and the reliefs have to be arranged, as far as possible, so as to give efficient troops at those stations; after long experience we came to the conclusion that we must have, considering the long distances and various other drawbacks in India, fixed stations from which to draw the troops. In most cases those are also what we call the equipping stations of the troops; but in some instances where troops are stationed, for example in the hills, the equipping station is on the line of rail. Umballa would be the equipping station for troops stationed in the hills round Simla, that is they would receive the bulk of their equipments at that particular station, but that is rather an exception to the general rule. The equipment is in possession of the corps generally, but there are certain reserves of field

service clothing and supplies that are kept stored in great mobilisation stores at various centres. Every corps has its instructions as to what it has to do in case of mobilisation, and the transport is furnished if the regiment is not already in possession of transport, as it might not be, in the Hills for example, from the Transport Corps, by a detachment of a portion of the corps, as I explained before. The transport, if I may allude to that again, consists of so many transport corps; for Cavalry five corps; nine corps, to be increased to 12 I believe, and seven or eight cadres; then we have pony cart trains, and silladar camel cadres, which are the nucleus of camel corps, with men who are under an obligation to join. Then, besides that, we have a large number of officers who have to investigate the resources of the various military districts in the way of transport. Our peace transport in India consists of about 4,000 camels, some 16,000 to 18,000 mules, 7,000 bullocks, and 7,000 carts. Besides that there are the transport trains of the Maharaja of Gwalior, and of the Maharajas of Jeypore, Mysore, and Bhurtpore. I mention these details with regard to the transport because it is really one of the first essentials of the mobilisation plan. Then all our equipments are laid down in the Field Service Equipment Tables, and we have certain Field Service Manuals which are drawn up for the guidance of officers on field service. The staff is all detailed for mobilisation, confidential lists being kept up by the Adjutant-General, and plans of movement are also worked out. For the general railway concentration of troops, tables have been drawn up showing the stations at which corps will entrain, the dates on which they will move, the rest camps where corps have to halt on their long journeys, and the number and composition of the trains of each unit; and the whole of the arrangements are worked out between the Quartermaster-General and the railway authorities. Then for this mobilisation we keep up equipments and reserves of all kinds of supplies, the reserve of rations for men and animals, reserves of clothing, large numbers of field hospitals which are mobilised at equipping stations, field medical store depôts, general hospitals; regimental and medical establishments are maintained, and proceed with the corps on movement. And we also maintain veterinary field hospitals and store depôts. The Ordnance Field Parks are always kept ready. In the arsenals they are all, as it were, ticketed for a particular mobilisation. The lists of Ordnance officers are kept up, and instructions prepared. We have the Telegraph department, which is a Civil department, ready to despatch its telegraph parties. The Postal Department has its field offices post ready to start in two days; and the Survey Department and the Military Accounts Department each have their arrangements made for the mobilisation. The large reserves of stores and supplies have been gradually worked up to during the past 15 to 17 years, and I think the despatch of the Indian contingent so quickly, in spite of the difficulty as to the ships, was really due to the working out of the mobilisation requirements, and all requirements and supplies were ready. Of course, the despatch of a small force like the Indian contingent did not test the mobilisation scheme in any way, but the troops were ready to move, because even if they were not on the mobilisation list everything was ready for them. In that particular case the general officers commanding at ports arranged for the movement of the troops in direct communication with the general officers commanding the districts from which the troops were drawn. The general officers at the ports again arranged for the receipt of all stores, and were given full powers to hire whatever accommodation was wanted, and so forth. The Lieutenant-Generals Commanding the Forces made all the arrangements with regard to rest camps, which is rather an important feature in Indian mobilisation, because they have to be used in these very long journeys by rail, and they have to be fully supplied. We keep up, and have kept up for many years, large reserves in India, which are on certain scales, and the heads of departments are charged with the responsibility of at once acquainting the Government if there is any depletion of these reserves.

21055. And you think they have been kept up?—They have been kept up. I have not gone into the question of the great manufacturing power there is in India, but we have large factories in India which are able to turn out military equipments of all kinds

Major-
Gen. Sir
E. Collen,
G.C.I.E., C.B.

25 Mar. 1903.

21056. We have had some evidence of boots being sent from India?—Yes, I mentioned in my evidence to-day that 200,000 pair of boots were sent from Cooper, Allen & Company, which is what is called the Government Boot Factory.

21057. We had one criticism from the Colonel of the Gordon Highlanders that the shoes that came from India were very bad?—I know that as a rule the boots have answered uncommonly well in India. The complaints have been very few, and we think that their lasting power is great.

21058. (*Sir George Taubman-Goldie*.) There was a difficulty in getting ships for transport even for those 5,000 men?—Yes, because, as I mentioned, the monsoon was not quite over, and therefore there were few ships in port.

21059. So that in the event, as has been suggested in certain quarters, for our keeping one or two army corps in South Africa ready for operations in another part of the world, India could not furnish a very large quantity of shipping?—No; that would depend, of course, upon the season of the year.

21060. But in some seasons of the year it could not?—No.

21061. (*Chairman*.) Had you any difficulty in obtaining staff officers for the expedition, with regard to the selection of the staff?—No. I think there was a difficulty afterwards, after they had been selected, with regard to the appointment of officers from home. I think there was something of that kind.

21062. Have you found that there were enough qualified staff officers for the various commands in India?—The question of staff training in India is a very large one. In my own personal point of view, I hardly think there is sufficient training for the staff even in India. They gain great experience in the constant manœuvres which take place, and the many small expeditions or campaigns we have had of recent years; but we have no particular system of training the staff in India as I indeed think there should be. That is a matter I took up some two or three years ago. The Indian officers go to the Staff College, but only three every half-year; and we have, in India, many officers of the British Army who have passed through the Staff College. I do not think there is any difficulty in selection of Staff College officers from the British Army, but, in regard to the Indian Army, I think there is some difficulty.

21063. You would like more officers of the Indian Army to attend the Staff College?—That is my view, provided, of course, that great care is exercised in the selection of

the men, and that the Staff College course is improved and made more practical, as I believe, indeed, it has been, from what I hear.

21064. Otherwise an officer has more opportunities in India of staff work?—I do not know that he has more opportunities exactly.

21065. I thought you said in the manœuvres and so on?—Yes, in that way undoubtedly he has.

21066. (*Sir Frederick Darley*.) Would it be practicable to have a separate Staff College in India and train officers in India?—That is a subject which has been often mooted. I got the Staff College thrown open to Indian officers many years ago, and when I considered the question of a separate Staff College I always felt that it was a great advantage for them to come home and be trained in the climate of England, and associate themselves with officers from other branches of the service of the British Army, and from all parts of the world.

21067. (*Sir George Taubman-Goldie*.) And get into touch with European ideas?—And to get into touch with those ideas. But, at the same time, till the Staff College can receive a larger body of Indian officers, which I think would be a very desirable thing, I am inclined to think that there should be some system of training staff officers in India. Some years ago I put forward a proposition to this end which included a special study of military history.

21068. The conditions of service in India and in Europe are somewhat dissimilar?—Yes, they are.

21069. (*Chairman*.) Is there any other point you wish to draw attention to?—I do not think so.

21070. (*Sir Frederick Darley*.) Has the Commander-in-Chief in India anything in the nature of an Army Board—what we know as the Army Board here, to consult with in reference to military matters?—No, there is the body which I spoke of, the General Mobilization Committee, which discusses any questions that are related to mobilization. There is also the Defence Committee of India, over which the Commander-in-Chief presides, but there is no body of officers exactly analogous to the Army Board, I think.

21071. The Commander-in-Chief, the Adjutant-General, the Quartermaster-General, and the Director of Intelligence, or at least the Intelligence Officers, do not meet to discuss matters as a distinct board?—Not as a formal Board, but they do, of course, meet day by day.

21072. Naturally; but they do not meet as a formal Board?—No.

FIFTY-SECOND DAY.

Thursday, 26th March 1903.

PRESENT :

The Right Hon. the Earl of ELGIN and KINCARDINE, K.G., G.C.S.I., G.C.I.E. (*Chairman*).

The Right Hon. The Viscount ESHER, K.C.B., K.C.V.O.
The Right Hon. The Lord STRATHCONA and MOUNT ROYAL, G.C.M.G.
The Right Hon. Sir GEORGE DASHWOOD TAUBMAN-GOLDIE, K.C.M.G.

The Hon. Sir FREDERICK MATTHEW DARLEY, G.C.M.G.
Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.
Sir JOHN EDGE.
Sir JOHN JACKSON.

BERNARD H. HOLLAND, Esq., *Secretary*.

The Right Hon. the Marquis of LANSDOWNE, K.G., P.C., G.C.S.I., G.C.M.G., G.C.I.E., called and examined.

(*In Appendices Band D to the Report Volume will be found all the Documents referred to in Lord Lansdowne's Evidence*).

21073. (*Chairman*.) As we know you were Secretary of State for War from 1895 to 1900?—Yes.

21074. And therefore before and during the early part of the war?—Yes.

21075. Do you desire to lay before the Commission any consideration that you gave before the outbreak of hostilities to what might be necessary?—Yes, I gave a great deal of consideration to the steps which might be necessary, in view of the possibility of hostilities and I

was in frequent consultation as to those steps with my military advisers.

21076. By your military advisers, whom do you mean?—I mean above all the Commander-in-Chief; you have no doubt before you the Order in Council of 1895 which then governed the procedure of the War Office, and you will see from that that the Commander-in-Chief is given a very well defined position as the principal advisor of the Secretary of State, but of course when I

The Right
Hon. the
Marquis of
Lansdowne
K.G., P.C.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.

26 Mar. 1903

*The Right
Hon. the
Marquis of
Lansdowne,
K.G., P.C.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.*

26 Mar. 1903.

say that my advice was mainly obtained from the Commander-in-Chief I do not mean for a moment to suggest that I did not communicate with other military experts connected with the War Office; the other heads of departments, the Adjutant-General, the Quartermaster-General, the Inspector-General of Fortifications, and the Director-General of Ordnance all had access to me and there were constant discussions with regard to these matters. Besides that I had opportunities of consultation with Sir Redvers Buller, who was designated in June, 1899, as the General who was to be in command of the operations in South Africa.

21077. And with the Director of Military Intelligence?—The Director of Military Intelligence had a position in the hierarchy of the War Office of distinct subordination to the Commander-in-Chief; it was his business to advise the Commander-in-Chief and it was the Commander-in-Chief's business to advise me. On the other hand, as I daresay your Lordship knows, Sir John Ardagh was with me five years in India, and was an old and intimate friend of mine, and I had many opportunities of talking to him, although perhaps that was not the regular official channel through which the advice of the Director of Military Intelligence should be given to the Secretary of State.

21078. But I think, speaking from recollection, Sir John Ardagh stated to us that he did consider that his functions put him into communication with the Secretary of State, although not perhaps strictly under the Order in Council, still as a matter of fact?—I adhere to the description which I have given of our relations, and as to that I would refer the Commission to the Order in Council and the Rules of Procedure.

21079. As to the Order in Council, I think you are going to speak to that later?—Yes. I may say for example that the Commission have seen some important collections of notes on the South African Republics which were prepared by Sir John Ardagh; those collections of notes were not put officially before me by the Commander-in-Chief, but I became aware of their existence and I asked the Director-General to supply me with a copy of them.

21080 (*Viscount Esher*.) Is that a little book you are speaking of?—A little buff book.

21081. (*Chairman*.) But the little buff book was practically a summary of the more detailed papers which were written in the Intelligence Department at that time?—I am afraid we are at cross purposes; I think the buff book you have in your mind is a later compilation which I have seen, which is of folio size.

21082. No?—The one I mean is a little duodecimo almost, or small octavo.

21083. That is the one I mean—Notes on the War.

(*Viscount Esher*.) Is that the one (*exhibiting a small book to the witness*)?—Yes.

21084. (*Chairman*.) That book is a summary of the more detailed papers which were in the Intelligence Department at that time?—Yes.

21085. You saw the detailed Papers I imagine, not only the buff book?—I may have seen some of them, but I have no recollection of any of those Papers having been submitted to me formally by the Commander-in-Chief.

21086. (*Viscount Esher*.) Would it have been his duty to submit them to you?—I think so.

21087. Distinctly his duty?—His duty, and not that of the Director of Military Intelligence.

21088. (*Chairman*.) Because the Papers begin—I hold them here in my hand—with 11th June, 1896, a Paper written by Colonel Altham and another longer Paper written by Sir John Ardagh in October of that year; you do not think you had those Papers before you in 1896?—I do not think so; I may have seen some of them.

21089. (*Viscount Esher*.) Would there not be a note on the papers themselves if they had been to you?—Probably, but the Commission, of course, has ample opportunity of calling for the papers.

21090. (*Chairman*.) It bears on the point at what time your attention was drawn to the possibilities of an outbreak of the war?—Yes, but I will not labour that point because I fully admit that during the summer of 1899 and before that little book came into my hands I was aware that there was a possibility of war and that I had often discussed it both with the Commander-in-Chief and with the Director of Military Intelligence.

21091. In 1899?—In 1899.

21092. But not earlier than that?—It is very difficult for me to tell you to-day the precise moment at which I became aware that there was a possibility of hostilities. It was a matter of common notoriety before 1899 that the Boers were difficult to deal with politically, and that they were making preparations.

21093. The paper I allude to of Sir John Ardagh's, in October 1896, is a long and able paper dealing with the whole subject historically and showing the preparations which the Boers were making, and it contains near the end the following sentence: "For the immediate present there seems to be a reasonable prospect of tranquillity in spite of warlike preparations, menacing language, and oppressive legislation," and the whole tenour of the paper was that we ought to have been making preparations also, or at any rate have the preparations of the Boers in our mind; do you think you did not see that paper in 1896?—I doubt whether I saw it in 1896; I am afraid I cannot now tell you the exact moment when I first saw it, but the Commission has no doubt been informed that we did in fact add to the strength of the garrison of South Africa before 1899.

21094. (*Viscount Esher*.) Must there not be something radically wrong with a system under which a paper of that degree of importance does not automatically go to the Secretary of State? In no other Department would a paper of such importance not go to the head of the Department as far as I know?—The question I think would be whether the paper was one which the Commander-in-Chief thought it his duty to lay before His Majesty's Government.

21095. Do you not think that was a very wide discretion to leave to the Commander-in-Chief?—I do not think so; he might receive advice that he did not think worth passing on.

21096. (*Chairman*.) I do not want to press you, Lord Lansdowne, as to the actual fact of when you saw those papers, but I just want to get quite clear before the Commission whether you did see them anything approaching to the time at which they were written. There is another paper, therefore, to which I want to refer, written in the Intelligence Department by Colonel Altham in September, 1898, which is headed "Frontier Defence in South Africa in a War against the Dutch Republic." Have you any recollection of that paper?—I have a recollection of it because I have had it amongst my papers and have looked at it lately, but I am afraid I cannot tell you the precise moment it came into my hands.

21097. At the beginning it had this sentence: "At the outbreak of such a war we shall at first be in a decided numerical inferiority; moreover we should have to face the problem of protecting a very long frontier, and should be handicapped with a certain amount of disloyalty (passive if not active) within our own borders; at least a month or six weeks must elapse before any appreciable reinforcements could arrive from England or India." That summarised the situation very well?—Yes, we were always fully aware that a delay of that kind was inevitable.

21098. And at the end there were conclusions under five heads pointing out that it was necessary to provide for speedy mobilisation, for transport, for defence schemes, and for the despatch of reinforcements; that was in 1898, before the date at which you say you became fully aware that a war was possible?—Yes. Perhaps, the best way in which I can put it to the Commission is this, that I was aware not only in 1898, but before that, that there was a possibility of hostilities; it was really a matter of common knowledge. I do not wish for a moment to suggest that upon the mere point of the possibility of hostilities I required any special warning.

21099. But it was not brought officially before you by the proper channel—namely, through the Commander-in-Chief, as far as you know at that time? This detailed information in the Intelligence Department was not brought before you by the Commander-in-Chief before 1899, I think you said?—The information must have come before me much sooner than that, because we added to the South African garrison in 1898, and, therefore, I must have heard something about it before that time.

21100. May I put another question, as to which, of course, you will have to consider how far you can give us information? Did you consider it your duty to lay

that state of matters before the Cabinet at that time—in 1898, say?—I am sure that it was brought before the Cabinet in 1898, because the additions which were made to the garrison were made with the sanction of the Cabinet.

21101. So that the Cabinet were aware, as is brought out in these papers, that the Boers were making warlike preparations, which could only be intended for war with this country, as early as 1898 at any rate?—Certainly.

21102. Any earlier, do you think?—I cannot say.

21103. Because, as I say, in these papers written in 1896 the same danger is pointed out?—I am afraid I cannot say whether the Cabinet had that information in 1896 or not.

21104. Is there anything else you would wish to say with regard to the information which was laid before the Commander-in-Chief by the Director of Military Intelligence?—That information was very correct at certain points; that part of it for example which had reference to the Boer armament, was entirely confirmed by what came before our knowledge as hostilities progressed. With regard to the anticipations of the Intelligence Branch as to numbers, the first observation I am inclined to make is that those estimates varied very considerably; for example, in the 1896 memorandum by Sir John Ardagh, to which your Lordship referred a moment ago, I see in paragraph 33 he estimated the gross maximum numbers as totalling 48,000; of these, he wrote off a certain proportion as being untrained or wanted for administrative services, and he also pointed out that the districts bordering upon the Basutos, Zulus, and other tribes, could not be entirely denuded of the combatant burghers, so that the force would be still further reduced. There you have a total of 48,000 subject to considerable reductions. In Major Altham's memorandum of 1898, if you will look at paragraph 2, you will see that his estimate was a total Boer field force available of 27,000 men, and his anticipation was that any further serious advance into the heart of either Colony was improbable, but that raids of 2,000 to 3,000 men were to be expected, and that it was against such raids that careful preparation was necessary. Then there is a remarkable memorandum of Sir William Everett, who was acting for the Director-General in his absence in the year 1899; the last sentence in that is to the effect that the largest number of Boers which would be opposed to a British force in Natal was not likely to exceed 13,500. That is the low water-mark in these anticipations and you have to contrast that with Sir Redvers Buller's estimate, which he made in a telegram sent to us while hostilities were in progress, that he was confronted by 120,000 Boers in the field. So that I think you may say that the estimates of numbers varied very considerably, and I am inclined to add that it is extremely difficult to verify any of them. You can verify the number of guns that the Boers had with them in the field, but I do not suppose anybody will ever know how many Boer men confronted us.

21105. The list of guns was singularly accurate?—I think very accurate; in fact the only mistake they made was that they thought the Boers had a larger number of heavy guns; it turned out that some of the heavy guns they had ordered had not been actually delivered.

21106. (*Sir Frederick Darley.*) May not Sir John Ardagh's estimate for 1896 have been correct at the time it was made, although it would not form a good estimate for 1899?—I think it may be fairly said that it was subject to revision.

21107. (*Chairman.*) We have it from Lord Kitchener that during the whole war they had 95,000 men out; that includes the Cape Rebels and a certain number of foreigners. That is all you wish to say with regard to that Intelligence Branch?—Yes.

21108. Have you any comments you wish to make about the anticipations of the military authorities?—I think that the point at which the military authorities failed to appreciate correctly the magnitude of the task that lay before us was rather this, that they did not sufficiently realise the fighting value of the Boers, if I may use the expression, their staying power in the field and the kind of effort that would be necessary to overcome them. No estimate of the field force necessary for that purpose exceeding one Army Corps was to the best of my belief ever put before us by our military advisers. In illustration of my meaning if you will look at Major Altham's Memorandum of 3rd June 1899, page 6, in the concluding part of Sub-Section 2, he speaks of the Free State as "an ideal terrain for mobile troops to swing round any position taken up by the enemy while a containing

force of infantry and artillery hold them in front. One defeat in this country would break up the enemy's forces on the wide open plains. The retreat of a force without cavalry and deficient in organization and discipline would be a slaughter from which no rally would be possible." I think those expectations must be regarded as rather sanguine when we consider them in the light of our actual experience. In the same connection I would call attention to a passage in Lord Wolseley's Minute of 8th June, 1899 which the Commission has already before it. Lord Wolseley then suggested that the operations should begin in South Africa as soon as possible so as to be over by next November. That also seems to me to show that military opinion was over confident. And then, of course, the Commission is aware of Lord Wolseley's, often quoted speech, delivered on the 6th November, 1899, in which he stated, with candour which does him credit, that, "We have found that the enemy are much more powerful than we expected."

21109. Your argument is that your military advisers did not appreciate sufficiently the difficulties of the situation?—Not fully.

21110. And that the strength of the force which they recommended was not adequate?—I think experience showed that it was not.

21111. Is that all you wish to say with regard to the strength of the field force as recommended?—The strength of the field force recommended was from the first one Army Corps with troops for lines of communication; the original recommendation is to be found in Lord Wolseley's Minute of the 8th June, 1899, paragraph 4. I never heard any doubt expressed as to the sufficiency of the force there specified, and perhaps at this point I may call attention to a Minute of my own, which I have ventured to lay before the Commission. It was written for the Cabinet in order to justify the demand which I was making, and which at the time seemed a very large one, for one Army Corps.

21112. Is that the Minute of the 3rd October?—Yes, I do not know that as you have it before you I need repeat what is there stated.

21113. You put in as your answer to that question, your Minute of the 3rd October?—If you please.

MINUTE BY THE MARQUESS OF LANSDOWNE,
3RD OCTOBER 1899.

STRENGTH OF SOUTH AFRICAN FORCE.

"Some surprise has been expressed at the magnitude of the force which will be collected in South Africa if, in addition to the troops now there or on their way, an Army Corps with cavalry division and troops for lines of communication is also sent out.

The troops now in or on their way to			
Natal number about	15,000
Those in or on their way to Cape Colony number about	7,000
There is some reduction in the numbers of the Army Corps in the latest proposals of the Commander-in-Chief, and, though it is impossible till the Reservists have rejoined to give accurate figures, the total is not likely to exceed			
			45,000
			67,000

I called the Commander-in-Chief's attention to the magnitude of these numbers in a Minute, dated the 13th September, in which I wrote:

"When the reinforcements recently ordered reach South Africa we shall have about 23,000 men in the Cape Colony and Natal. It is notorious that, if we do not come to terms with the South African Republic, we shall send a much larger force.

"I want to know whether any part of the force now in or on its way to South Africa is to be counted as part of the larger force. Whether it may be looked upon, so to speak, as a payment on account towards the satisfaction of the military demands?"

I pointed out that, if not, we should have about 70,000 men in South Africa, whereas Sir R. Buller had mentioned 50,000 as the force he would require in his Minute of the 5th September, which was circulated to the Cabinet.

In reply, the Commander-in-Chief recommended that we should, in any case, mobilize a whole Army Corps; but he indicated that, if we decided to adhere to the Natal route, the troops already in Natal might be taken as "equivalent to one infantry division and one cavalry brigade," and the Army Corps reduced accordingly.

The Right Hon. the Marquis of Lansdowne,
K.G., P.C.
G.C.S.I.,
G.C.M.G.,
G.C.I.E.

26 Mar. 1903.

*The Right
Hon. the
Marquis of
Lansdowne,
K.G., P.C.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.*

26 Mar. 1903.

We have now definitely decided to adopt the Cape Colony-Orange Free State route. It is intended that a force of 10,000 men should remain in Natal, on which side it will make a valuable diversion; that about 5,000 men shall be detached for service on the west side (Kimberley, &c.), and that the main force shall enter the Orange Free State from the south.

In these circumstances the Commander-in-Chief and Sir R. Buller hold that there should on no account be any reduction in the strength of the Army Corps to be sent from home, and that no part of the force now in or on its way to South Africa should be reckoned as part of it.

I believe they are right, and that we should make a grievous mistake if, from motives of economy, we were to reduce the number of troops for which we are asked to provide.

We are going to fight an enemy more formidable than any whom we have encountered for many years past, and we should see to it that we meet him under conditions giving us incontestible superiority in the field.

Moreover, the adhesion of the Orange Free State has added very largely to the Boer force.

I also think it right to point out when by merely counting heads we arrive at a total of 67,000 soldiers to be employed in South Africa, we greatly mislead ourselves if we regard that number or anything like it as representing the fighting force which we should be able to place in the field.

In reckoning the size of a force for the purpose of active operations we have to take account only of the number of sabres, bayonets, and guns which that force can oppose to the enemy. The staff of the force, the cavalrymen and infantrymen who for one reason or another are not in the fighting line, the Royal Engineers, Army Service Corps, supply and ammunition columns, hospitals, and the considerable numbers employed in various capacities at the base must be left out of account; and it is usual when dealing with artillery to take as the unit of calculation the guns themselves, and not the gunners who man them.

If the British forces in South Africa be dealt with in this manner we shall have the following result: the force of 15,000 now in or on its way to Natal, when stripped of Staff, Royal Engineers, Artillerymen, and Departmental Corps, should be shown as consisting of—

1,900 sabres,
9,800 bayonets,
42 guns.

The 7,000 in Cape Colony similarly treated will have—

450 sabres,
4,900 bayonets,
18 guns.

The field force—that is to say, the Army Corps cavalry division and troops for lines of communication—will probably number about 45,000 men.

Large deductions have to be made to arrive at the actual fighting force, for this figure includes some 2,800 Artillerymen and a considerable number of Royal Engineers, while the personnel required for the supply service of the Army Corps, the ammunition columns and parks, the hospital services, the Staff, and the general depot at the base, absorb 8,500 more.

The actual fighting strength of the field force may be estimated as follows:—

Cavalry Division—

3,000 sabres,
1,000 bayonets
12 guns.

Army Corps—

1,000 sabres,
21,000 bayonets,
102 guns.

Lines of Communication—

6,000 bayonets.

These added to the forces now on their way to South Africa, make a grand total of—

6,350 sabres,
42,700 bayonets,
174 guns."

October 3, 1899.

That Minute was written with only one object, which was to explain to the Cabinet why we were asking for what in those days seemed a very large Army with which to crush these two little Republics.

21114. This Minute of 3rd October of course was immediately before the declaration of war?—Yes, I merely put that in in order to show what was in the minds of my military advisers and in the minds of the Cabinet as to the strength of the force which was necessary for the purpose.

21115. Even up to the very day of the Ultimatum?—Yes, there was no question of anything more than that. That Minute, I ought to add, was prepared with the assistance of the Commander-in-Chief, and all the military figures in it were supplied by his department.

21116. And as to your other military advisers of whom you have spoken, did they concur in that estimate of the forces?—I think I may say so; I never heard a doubtful note on the subject in the office.

21117. We had from Sir Evelyn Wood that he mentioned 60,000 men as the force to you, which, I suppose, means practically the same thing?—Practically.

21118. On what supposition with regard to the two Republics did that force proceed?—Distinctly upon the supposition that we had to reckon with both Republics; the Orange Free State had actually declared itself against us on the 27th September, and as my Minute was written on the 3rd October it is quite clear that we had before us the prospect of hostilities with both Republics. I think, indeed, that all of us realised from the first that the Orange Free State would have to be taken into account. For example, in Lord Wolseley's Minute of June 8th he points out in the last sentence that, "In any case the great bulk of the young Boers from the Orange Free State would join the Transvaal against us." Again, Lord Wolseley in his later Minute of July 7th referred to the existence of the secret Treaty between the two Republics, according to which if either were threatened or attacked the other would assist it.

21119. I do not know whether you remember that that also appeared in the Intelligence Division papers even in 1896?—No doubt

21120. In Sir John Ardagh's Minute of October, 1896, he says: "As the shortest, flattest, and easiest railway towards the main objective is that which leads from Springfontein through Bloemfontein towards Johannesburg and Pretoria, that railway must be the obligatory main line of advance"; so that I suppose that was the idea in the mind of your military advisers at that time?—The only doubt in their minds was whether, owing to the attitude of the Orange Free State, any difficulties would be created on political grounds in allowing them to use the Orange Free State route, but that in one shape or form we should have to count with the Orange Free State as well as the Transvaal I do not think anyone doubted; at any rate, there was no doubt upon the point when my Minute of October 3rd was written, because by that time the Orange Free State had actually declared itself.

21121. We were told by Sir Redvers Buller that there was a doubt about the position with regard to the Orange Free State when he went out?—I remember a conversation which passed between myself and Sir Redvers Buller before he left England, and I remember telling him what I said a moment ago to your Lordship, which was that the attitude of the Orange Free State was doubtful and that if it so happened that after all President Steyn maintained an attitude of neutrality it might be difficult for us to force our way through the Orange Free State and thereby drive them into open opposition, but I certainly never suggested to Sir Redvers Buller that the Orange Free State had not to be reckoned with.

21122. Up to what date did that uncertainty continue?—An end was certainly put to it on the 27th September by the declaration of the Orange Free State, but I was very much impressed by the inconvenience of allowing that uncertainty to be prolonged, and it was in consequence of that that I wrote my Minute of September 25th which I think the Commission has. That is the Minute headed, "Line of Advance," which is accompanied by Minutes by Sir Redvers Buller and the Commander-in-Chief. The object with which I wrote it was to point out that it was necessary for us to compel the Orange Free State to declare themselves one way or the other, and as a matter of fact two days after the Minute was written the Orange Free State had declared themselves.

21123. You put in that Minute of the 25th September?—Yes.

1492

LINE OF ADVANCE.

MEMORANDA BY THE MARQUESS OF LANSDOWNE,
SIR R. BULLER, AND VISCOUNT WOLSELEY.

(1) Memorandum by the Marquess of Lansdowne.

"My military advisers have repeatedly impressed upon me: (1) the importance of an early decision with regard to the line of advance to be adopted in the event of war with the South African Republic; and (2) the superiority of the line leading through Cape Colony and the Orange Free State over any other line.

Sir R. Buller has spoken to me again upon the subject, and has, at my request, written the accompanying Memorandum, to which the Commander-in-Chief has added a few observations.

It is obvious that if we continue to make all our preparations for attacking by way of Natal, we shall find it virtually impossible to alter our plans should the Orange Free State at the last moment declare itself hostile.

The recent utterances of President Steyn may, I think, be taken as giving us fair notice that, if there is war, we shall have to reckon with both Republics.

The question ought, I think, to be faced without further delay; we cannot go on making our preparations in ignorance of a factor which should determine the strength of the force to be employed, the places at which land transport and supplies will have to be collected—in a word, our whole plan of campaign.

It does not seem as if in the present temper of the Orange Free State much would be gained by an attempt to arrive at a friendly understanding with it; but I trust that some means will be found of putting an end to our suspense, and letting us know whether we may proceed with our arrangements upon the assumption that it will be open to Sir R. Buller to make his way to Pretoria across the Orange River.

After all that has taken place, the Orange Free State will scarcely have a right to complain if it has to choose between treatment as an open adversary and an explicit undertaking of neutrality.

September 25th, 1899.

L."

(2) Memorandum by Sir Redvers Buller.

Now that money has been granted to make purchases in anticipation of the dispatch of an expeditionary force to South Africa, it is essential that the base should be selected from which that force is to start.

Durban, the base for an advance through Natal, is some 730 miles from Cape Town, the principal base of an advance through the Orange Free State.

From Durban to Pretoria is, say, 500 miles. The average distance of Pretoria from the three ports in Cape Colony is, say, 1,000 miles.

From the Natal frontier to Pretoria is 200 miles, and from the Cape frontier to Pretoria is 400 miles.

It is probable that the railway authorities in Natal will do all they can to help an expedition. It is doubtful if in Cape Colony we shall be at all certain of the same willing assistance, if, indeed, we can count on not being obstructed. So far, then, everything points to the Natal route being the best, and so it undoubtedly would be, were it not for two great drawbacks—the port of Durban and the position of the Orange Free State.

I have not been able to obtain precise information as to the facilities Durban now offers for the disembarkation of an expedition. I am told that the utmost speed would be three ships a day.* An Army Corps will require close on 100 days for its transport. If they can only discharge at the rate of three a day, disembarkation will occupy one whole month, and bad weather would make it still longer. This is a serious outlook.

The Orange Free State flank the line of advance by Natal for some 200 miles, viz., from Ladysmith to Standerton, and even farther.

Now the Orange Free State may adopt three courses:—

1. They may declare themselves neutral and evince a benevolent neutrality to England.

2. They may declare themselves neutral, with the determination of secretly helping the Transvaal as much as possible, and with the idea that the moment may come when it will be opportune to declare themselves on the side of the Transvaal.

3. They may openly side with the Transvaal.

A glance at the map will show that in the second case they will be dangerous, and in the third case that it would be unwise to offer them the advantages of an advance by Natal, which would mean a flank march of 200 miles across their front.

In my opinion, an advance by Natal in either of the second or the third cases would be a greater risk than ought to be incurred.

It must be recollected that neither Natal nor the Transvaal will provide food for the force that advances on Pretoria. All it eats will have to be brought up from behind it. To advance on Pretoria and leave a hostile Free State to take its own time and opportunity for cutting the communications and stopping the flow of supplies would, I think, be running an unnecessary and most dangerous risk.

I would, in such a case, far rather face the double distance and the possible hostility of the Cape Railway directorate than risk a march of 200 miles round a concealed enemy.

An advance through the Orange Free State would give three seaports or bases instead of one, and at the commencement enormously simplify disembarkation, concentration on the frontier, and supply when there.

The Orange Free State is open; the advance would be through its centre; the country contains a good quantity of supplies.

It would be almost impossible for an advance through the Free State to be opposed by all the Free State troops and all the Transvaal troops, while such a combination is quite possible against a force advancing by Natal. On the other hand, an advance through the Free State would have every chance of disposing of that State first, and settling with the Transvaal alone afterwards.

Consequently, I would most strongly urge that as soon as Her Majesty's Government decide upon an expedition they should force the Free State to declare for one side or the other. If they declare for the other side, our route to Pretoria should be via Bloemfontein; if they declare neutrality, they should be forced to give sureties that they preserve that neutrality. Failing to do this, they should be treated as hostile.

A decision in the matter is urgently required, as it is essential the stores we are now ordering should be collected at ports that serve the route which may be selected.

(Signed)

REDVERS BULLER, *General*.

September 24th, 1899.

(3) Memorandum by Viscount Wolseley.

Lord Lansdowne,

I fully indorse Sir R. Buller's opinion that our best line of advance upon Pretoria will be from the Orange River by the railway running through Bloemfontein, although I do not entirely agree in the reasoning upon which he apparently bases it.

The sound reason, in my opinion, for selecting it is, that in moving thus through the Orange Free State we should have no mountain range with difficult passes to force; that we should avoid fighting on the species of ground most suitable for Boer tactics and least suited for those of a regular army; that we should fight on a good field for our cavalry and horse artillery (an arm of which the Boers have none), and where our superiority in guns and in their handling would secure us a great advantage.

(Signed) WOLSELEY.

September 25th, 1899.

21124. I think Sir Redvers Buller's point was that when he wrote his Minute of the 24th September he was not aware, indeed, he had been told to leave the Orange Free State out of his calculations?—I am sure he had not been told by anyone to leave it out of his calculations; what he had been told was that for political reasons it might be desirable to adopt the Natal route instead of the Orange Free State route, the Natal route being one which had certain advantages, as you will have seen from some of Lord Wolseley's Minutes. I rather press the point because it might be suggested that this force which we were prepared to dispatch, the Army Corps, was sufficient if we were dealing only with the Transvaal, and was not sufficient if we were dealing with the two Republics. What I have said was intended to show that my military

advisers must have been aware that we had to reckon with both the Republics, and I should like, as a bit of confirmatory evidence, to mention this—that some time after both the Republics were in arms against us, and after Sir Redvers Buller had actually gone to South Africa and was in command of the operations, we telegraphed to offer him another division, and he then refused that division on the ground that he did not want it yet. I think you may fairly infer from that that at that time, at any rate, the force already provided for was regarded as sufficient for the two Republics.

21125. What was the date of that telegram?—November 4th. You have the file of telegrams, and if you look at telegram No. 8, on page 10, you will see that he replied that the preparation of an extra division seemed desirable, “but I do not yet see need for its dispatch from England.”

21126. Did not Sir Redvers Buller acknowledge—at least he did acknowledge in his evidence to us—that he considered that practically whatever the Free State said our difficulty would be equal to the sum of the two states?—That is practically, if I may say so, the point I should wish to put to the Commission, that we felt that all through.

21127. Had you any information that a larger force would be necessary?—No.

21128. Not from your advisers at home?—No.

21129. But from your adviser at the Cape—I am alluding to Sir William Butler?—It was constantly said—I don’t know on what authority—that Sir William Butler had advised us that a very much larger force would be necessary; the number that was freely mentioned as having been proposed by him was 100,000 men or thereabouts. I took a great deal of trouble to ascertain whether there was any foundation for that statement and I could find nothing amongst the official documents. I asked the Commander-in-Chief to search amongst the papers in his possession. Lord Wolseley gave me this Minute, which I might perhaps read—it is dated 18th January 1900: “I have had all general Butler’s letters to me read, and the only one in which he refers to the number of troops we should require in the event of war in South Africa is in a letter dated the 10th May 1899. His words are, ‘All things considered I put the total of troops required in South Africa in the event of war between the English and Dutch races, for that is the real meaning of a war in the Transvaal, at 40,000 men;’” that is 40,000 men in the event of the struggle becoming a racial war and extending to the whole of South Africa.

21130. There is nothing to be found suggesting a larger number?—Absolutely nothing.

21131. Is that all you wish to say with regard to the strength of the force?—That is all.

21132. With regard to the composition of the force?—The composition of the force, as I said just now, was indicated to us by the Commander-in-Chief in his Minute of June 8th; it contained, in addition to a complete Army Corps, a Cavalry Division, and one Battalion of Mounted Infantry, with four battalions for line of communications.

21133. Was it ever suggested to you that there should be any different composition of that force?—No, I can call to mind no such suggestion.

21134. Particularly with regard to the numbers of mounted men?—No; I am under the impression that the number of mounted men allotted was in excess of what was usually allotted to an Army Corps, but that is a point upon which, no doubt, the soldiers would give you evidence.

21135. The conditions of South Africa were rather different from ordinary conditions in that respect, were they not?—No doubt.

21136. Was that not taken into account at the time?—I do not remember that point having been particularly mentioned—not so far as the need for a larger number of mounted troops is concerned.

21137. It was brought rather to a point by a certain telegram with regard to Colonial troops?—Yes. Do you wish for any information upon that point?

21138. Yes, if you please?—I do not know whether I should be out of order if, as my answer to that question, I read a short extract from a statement that I made in the House of Lords. On the 13th February, 1902, during the course of a general military debate, I referred to what I see I characterised as the venerable assertion that

on the outbreak of the war the Government had discouraged the Colonies from sending mounted troops. I went on: “It is put in this way, that the Colonies offered mounted troops, and that we snubbed them and said that we did not want any. That story is repeated in every military debate. I ask your permission once again to remind the House of the actual facts as they occurred. We sent out with the first troops that went to South Africa more than the usual proportion of cavalry, we also arranged that with each battalion of infantry there should be a company of mounted infantry, and when the question of making use of the Colonial troops came up we began by accepting the services of three small bodies of Colonial mounted infantry. That in itself is a proof that we did not set our faces against the employment of Colonial mounted troops. Then came the moment when from all over the Colonies offers of assistance, mostly in general terms, were received by the War Office. It was necessary to send some kind of answer to the Colonies at once. We consulted the General who was to have the chief command in the field, Sir Redvers Buller, and in consultation with him it was determined that we should inform the Colonies, who were at that moment offering in some cases cavalry, in others artillery, and in others infantry, that at that particular moment infantry would be most serviceable and cavalry least serviceable. Cavalry and mounted infantry are different things. The reason infantry were asked for was that it was proposed that we should attach small bodies of Colonial soldiers to the units of Imperial soldiers already at the Cape. It was a proposal very much approved at the time by the Colonies, and it was a reasonable one. At that time we were dealing altogether with a force of not more than 1,500 Colonial troops. A short time after, when the question of larger Colonial contingents was being discussed, I find that we took 4,700 mounted men from the Colonies, as against 2,400 unmounted men. It is, to say the least, a gross exaggeration to represent the then War Office as having repudiated the offers of mounted troops from the Colonies.”

21139. I think your attention has been drawn to the answer which Sir Redvers Buller gave us as to his advice on that subject?—Yes, that answer gives an account of a conversation that took place between Sir Redvers Buller and myself at the War Office. I remember that conversation. Sir Redvers Buller at that time was rather reluctant to accept the services of Colonial troops and I remember his expressing the opinion—which was expressed in the extract I read to you a moment ago—that the best way of employing them was by attaching small bodies of them to units of regular troops already in South Africa, but it was not upon the occasion of that conversation that the famous telegram was settled. Subsequently to that conversation we had to consider the general question of the manner in which these offers from the Colonies should be received, and on that occasion Mr. George Wyndham, who was then Under Secretary, went down to Aldershot to consult Sir Redvers Buller, and the result of that consultation was the often quoted telegram.

21140. He, as I understood him, thought that he would get a large number of men in South Africa itself who would be useful as mounted men, and he also adds, as you see at the end of that answer: “My idea was that all the Colonists could ride and that I could mount them and turn them into Mounted Infantry and pay them all alike 5s. a-day?”—I daresay that was his idea; I do not think he unfolded it to me at the time.

21141. Therefore I understand he meant that although they might come as infantry from the colonies he would use them as mounted infantry?—That is not quite consistent with my recollection that he proposed to attach them in small detachments to infantry battalions, but that is merely my conjecture.

21142. (*Lord Strathcona and Mount Royal.*) He counted on there being a large number of unemployed men in Johannesburg, connected with the mines, good riders, whom he could use, I think he said?—Very likely.

21143. (*Chairman.*) At any rate, you represent that that telegram to the colonies was sent distinctly on the advice which you got on the occasion that Mr. Wyndham went to Aldershot from Sir Redvers Buller?—Yes.

21144. We had some evidence regarding it from Lord Wolseley, and I just refer you to two answers because I think it perhaps brings out what was meant. He was asked: “And you recommended these words: ‘Infantry most, cavalry least, serviceable’?”—(A) Yes, I remember quite well saying that cavalry would be quite useless.

G.C.S.I.,
G.C.M.G.,
G.C.I.E.

26 Mar. 1903.

(Q) But you did not mean by that to exclude mounted Infantry? (A) No, it was cavalry I had in my thoughts all the way through, because I know what irregular cavalry, if I may say so, our Yeomanry are. As cavalry they are of no use; they are very good mounted troops, but they are no use as cavalry?—If a civilian has a right to an opinion on the subject I entirely agree. I draw a very great distinction between Colonial Cavalry and Colonial Mounted Infantry.

21145. But I mean that was the intention, apparently, of the telegram—to throw a doubt upon their being sent as cavalry?—Quite so; that the gist of the telegram was a discouragement of cavalry, but not a discouragement of mounted troops, because on the contrary we showed by what we actually did that we were glad to take mounted troops.

21146. May I put the same question to you as I put to Lord Wolseley: Was it not a little unfortunately worded?—Perhaps; judged by the results, I think you may say so.

21147. Then as to the time for concentration of the field force?—There, if I may, I would put in my Minute of August 12th, 1899.

MINUTE BY THE MARQUESS OF LANSDOWNE, DATED 12TH AUGUST 1899, FOR THE INFORMATION OF THE CABINET.

The Cabinet wished for information as to the time which would elapse between the occurrence of an event rendering hostilities with the Transvaal inevitable and the concentration in the north of Natal of the force which we should probably send out, viz., an Army Corps, and a cavalry division.

2. Assuming such an event to take place on the 1st September, a Proclamation in accordance with the Reserve Forces Act of 1882 would at once, say on the 2nd September, be issued by the Queen in Council declaring a "great emergency," and summoning the Army Reserve, or part of it. This Proclamation has already been drafted and approved by the Law Officers. Assuming that three Privy Councillors were available, it could be signed by Her Majesty within a few hours. Notices to reservists to rejoin would immediately be issued. These notices are ready, and are in the hands of the local military authorities, who would dispatch them on receipt of telegraphic instructions. The reservists would rejoin their units, say, by the 10th September. Parliament would, under the terms of the Act, have to be assembled not later than the 12th September. The infantry units forming the force would be mobilized on the 14th September, and the other units between that date and the 1st October, and the whole force would, *if the whole of their clothing and equipment were ready for them, and if ships were ready for the troops as soon as the troops were ready for the ships*, be embarked in instalments during the last fortnight in September. The first battalion would arrive at Durban in four weeks from the date of embarkation, and would be followed at close intervals by the remainder of the force. *If the troops could be provided on arrival with their transport, vehicles, and animals*, each unit would be immediately passed up the line on route for the place of concentration. I am afraid, however, that without preparations which the Cabinet has not authorized, and without incurring very heavy expenditure, a much longer period of time must be allowed for. To insure rapidity both in mobilization at home and in concentration in South Africa, the following conditions must be fulfilled:—

- (1.) The clothing and equipment must be ready for the units as soon as the Reservists rejoin.
- (2.) The vehicles which will be taken out from home must be fitted for mule and ox draft before being sent on board ship.
- (3.) The ships must be ready for the troops as soon as the troops are ready to embark.
- (4.) The vehicles and animals required to complete the transport of the force on its disembarkation must be ready for the troops as soon as they land.
- (5.) Provision depôts to supply food and forage for men and horses must have been established at the place or places of concentration in Natal.

3. With regard to (1) and (2), I am advised that it would take at least a month to procure certain articles of equipment and stores specially required for a campaign in South Africa, and to convert for mule and ox draft the vehicles to be taken out from home.

4. With regard to (3), it appears from information received from the Admiralty that more than a month would elapse before the whole field force could be embarked, though they expect to be able to embark some of the infantry units within about a fortnight of the orders being given to take up ships. It would accelerate their arrangements if they had authority to purchase horse fittings in advance at a cost of £13,800.

5. The retardation which would result from our neglect of the precautionary measures comprised in (1), (2), and (3), would, however, be insignificant compared with that which would be occasioned by a failure to provide beforehand the transport which should be ready in South Africa to render the force sent out mobile. For this purpose we should require about 14,000 mules and 900 vehicles. A part of these could be provided in South Africa, but the balance would have to be imported. All we have done in this direction up to the present has been to send officers to various places abroad to make inquiries about purchasing mules, vehicles, and harness, but the Quartermaster-General calculates that three months must elapse from the date of our order to purchase before the transport, vehicles, and animals could be landed in South Africa.

6. A similar period must elapse before we can accumulate at the point of concentration sufficient supplies of food and forage to maintain the force for two months, the minimum with which it is thought that the force should take the field.

7. These are, indeed, the governing factors in the calculation. The most fatal mistake that can be made is to place the troops in a country in which they are wanted to act before transport and stores have been accumulated there. The troops cannot act; all they can do is to consume in inaction stores which are being collected for the purpose of rendering them active.

8. Nothing, then, will be gained by landing an Army Corps in South Africa until all preparations to render it mobile are complete. I assume, therefore, that it will take 90 days to complete the transport requirements of the force, and that the voyage from home to Durban will take 27 days. Unless, then, steps had been taken beforehand for the provision of the required transport, there would be no object in completing the embarkation of the whole force until about 63 days after the Proclamation calling out the Reserves had been promulgated; it would then reach Durban 13 weeks after the date of the Proclamation, or about the 1st December.

9. If, on the other hand, all the necessary preparations were complete—and I would point out that it is necessary to complete them all, as the omission of one would vitiate the remainder—if the special equipment were ready for issue, the vehicles to be taken out from home converted, vehicles, mules, and oxen assembled in South Africa, if horse fittings had been provided beforehand for the ships, and supply depôts established up-country, then the first force could be landed in South Africa and be ready to move up-country at a much earlier date. It could under such circumstances reach Durban during the latter half of October and be dispatched to its destination as fast as the limited landing facilities and train accommodation would admit.

10. There remains the question of the landing accommodation at Durban and the railway transport from Durban to the point of concentration. The railway from Durban to the Transvaal frontier is a single line with steep gradients, and it is believed that its carrying capacity is very limited, but the landing capacity of the port is still more limited. It is calculated that the actual disembarkation of an Army Corps and a cavalry division could not be effected at Durban in less than a month. A margin of a fortnight at least should be allowed for troops to take over local transport on arrival and for the recovery of the horses from the long sea voyage from England. It may be estimated, therefore, that at least six weeks must elapse from the date of the first ship arriving at Durban before the whole force would be at the railhead ready to move.

11. The situation may be summarized thus:—

As matters now stand it would not be possible to place a mobilized Army Corps and a cavalry division in the North of Natal under about four months. If, on the other hand, all our preparations were complete, this period might be reduced by about one month; but in order to effect this it would be necessary at once to incur an expenditure which may be approximately estimated as follows:—

*The Right
Hon. the
Marquis of
Lansdowne,
K.G., P.C.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.*

26 Mar. 1903.

PRIME CHARGES.

	£
1. Purchase of clothing... ..	20,000
2. " equipment for Maxims	950
3. " saddlery	4,400
4. " hospital equipment	22,700
5. Fittings for sea transport of horses	13,800
6. Purchase of mules and oxen	694,400
7. " vehicles and harness	161,000
8. Provision of supply depots, Natal*	176,000
9. Conversion of vehicles to mule and ox-draught	4,000
Total	1,097,250

CONTINUOUS CHARGES.

	£
Forage for 14,000 mules at 1s. a day	21,000 per mensem.
Wages for civilian drivers, leaders and conductors	35,000 "
Total	56,000 "

12. I add these additional observations:

(1.) It would be possible, without such preliminary steps as I have described, to send a part of the troops up-country to act as a sedentary force in garrison, or to relieve our own troops, but such a force could not leave the line of railway.

(2.) The force already in Natal, even when reinforced by the two battalions which we are now adding to it, might, if it were attacked by the whole Boer army, have to fall back, particularly if it were found in occupation of very advanced positions; but there is no reason to believe that it would run any danger of being overwhelmed. The long delay anticipated in this Memorandum would therefore not involve any risk of a military reverse, although its political effects might be serious and inconvenient.

With regard to the expenditure of £1,097,250 mentioned in paragraph 11, I may point out that should a large force be sent out to South Africa the money will merely have been spent in advance instead of after mobilisation; on the other hand, should hostilities be avoided, a part of the cost will be recovered by the sale of mules, &c., but the loss would, of course, be heavy.

August 12th, 1899. (Signed) LANSDOWNE.

21148. Did not that Minute bring out very distinctly that there were certain preparations which had been recommended by your military advisers which had not been made at that moment—in August?—They might have been desirable. Unless there had been political reasons for not making them.

21149. That is your answer—that there were political reasons?—Quite so.

21150. Because your Minute goes to show that in order to have the concentration as rapidly as possible those preparations costing over a million were necessary?—I think the sum of that Minute was to show that three months was the minimum period for complete preparations for landing a field force in a mobile condition in South Africa, including not only mobilisation but the collection of transport and the preparation of all the equipment necessary for it to take the field at once. The actual mobilisation, as you will have observed from this Minute, is a much simpler and briefer operation. Mobilisation would probably have taken two weeks; the embarkation of the force say two weeks more; four weeks, perhaps, for the voyage, making eight weeks, or, say, two months as against three months. I have dwelt upon that point, because I think it shows that the immediate need, if anything was to be done, was not mobilisation but the collection of transport—I do not mean sea transport but land transport—and various other equipment.

21151. You sum up the situation in paragraph 11 "As matters now stand, it would not be possible to place a mobilized Army Corps and a cavalry division in, the north of Natal under about four months. If, on the other hand, all our preparations were complete, this period might be reduced by about one month." That means that the expenditure of the sum of a million was necessary to reduce the time required by one month?—Yes.

21152. And that was what was recommended by your military advisers at the time?—Yes.

21153. And, as I understand it, you recommended it to the Cabinet?—No; I pointed it out to the Cabinet. I wished to lay the problem before the Cabinet. That must not be taken by the Commission as a recommendation of mine that the thing should be done immediately.

21154. Then would you explain exactly what that means; you, as Secretary of State for War, on the advice of your military advisers, looking at it from a departmental point of view, would have recommended it?—No, because I cannot dissociate my position as Secretary of State for War from my position as a member of the Cabinet. I placed the Cabinet in full possession of the problem which lay before us. I gave them this "time table," so that they might know what risk was incurred by the postponement of the expenditure, but I take my full share of the responsibility of the Cabinet for not having incurred that expenditure at the time.

21155. But for the most effectual use, that is to say at the most speedy moment, of the force which you had been advised was necessary for the operations in South Africa, the expenditure of that sum of money was necessary at the time at which it was proposed?—It would have curtailed the period during which it was impossible to make use of the field force as a fully equipped mobile army.

21156. And your answer to the question why that was not done, is that it was not done on political considerations on which the Cabinet came to a decision?—About which with your permission I should like to say a few words when we come to the Commander-in-Chief's minutes.

21157. I only want to get it here, that it was political considerations which delayed those preparations being made?—Certainly.

21158. But you did recognise in the War Office that there must be a considerable interval between the declaration of war, and the moment when the British Force would be ready to advance?—Clearly; that was very well put I think by Sir Redvers Buller in his Minute, which you have, of July 6th, 1899, second paragraph: "It is evident that in any case a considerable period will necessarily elapse after a state of war has been declared or established by one side or the other before the English Force can be ready to commence an advance on Pretoria."

21159. Then the question is what was the policy of the War Office with regard to that period?—Our policy was to take such measures as might be necessary for securing the safety of the Colonies in the interval.

21160. And do you submit that those measures were taken?—I submit that they were taken; the South African Garrison was increased, first from a normal of 2,000 to 7,000, and eventually to 23,000 when the larger reinforcements were sent out in September, 1899; those reinforcements, you will remember, arrived just before the War broke out.

21161. You mean the reinforcements from India?—Partly from India and partly from other places—a reinforcement of 10,000 men altogether.

21162. Is it your position that your advisers at the War Office represented to you that those precautions were sufficient and that the Colonies were safe?—With that force, yes.

21163. Is that recorded in any Minutes by them at the time?—Before you go to that may I say one word. You mentioned that a part of these reinforcements were taken from India; that has been a good deal controverted, and particularly so in some of Lord Wolseley's Minutes which have been put before you. Perhaps I might state briefly why the Cabinet decided to take the reinforcements from India, or at any rate a part of the reinforcements from India, rather than go elsewhere for them. In the first place, we could get them sooner from India to the Cape; in the next place these Indian battalions were seasoned battalions at full strength, and fit to take the field without shedding any of their young soldiers as a home battalion would have to do. In the next place we could get the battalions without calling out the reserves, which, as the Commis-

* This is the cost of one month's supply for the force; a second month's supply could, it is calculated, be dispatched to the point of concentration after the issue of the Proclamation in time to arrive there before the troops.

tion no doubt is aware, is a formidable operation for many reasons. The only alternative, to filling up a home battalion with reserves is to take two battalions, get rid of the young men in each of them and make one strong battalion out of the two; and I am bound to say that my experience of the War Office has always taught me to regard an operation of that kind with the utmost dislike. I believe it is bad for the regiments, bad for the officers, and it has always been to the best of my belief condemned by all high military authorities. Lord Wolseley's objections to taking these 5,500 troops from India are recorded in one of the letters to me, which has been put in—that of August 24th, 1899.

21164. Is that all you wish to say about the Indian reinforcements?—That is all.

21165. Would you now speak to the question of whether the Colonies were made reasonably safe or not, according to your military advisers, by those reinforcements?—I think there was a great weight of expert advice to show that the Colonies would be safe with those reinforcements; for example, Sir Penn Symons, on the 16th July, advised that a reinforcement of 2,000 men would put Natal in an efficient state of defence; on the 25th July he reported that 5,000 would suffice to make the defence complete; and, as a matter of fact, we sent more than 5,000—we sent over 8,000. Lord Wolseley, in his Minute of August 18th, begged the Government to consider the advisability of sending to Natal with the least possible delay an Infantry Division, a regiment of cavalry, and so on—altogether about 10,000 men—and with that force, the Commission will observe, he was prepared to hold the whole of the northern triangle of Natal. That is stated in the following paragraph.

21166. I think if you read that paragraph it would be useful?—"With such a force 'as the 10,000 men' added to the troops already in Natal the whole triangle I have named could be occupied and held. This would place us in a position to save the railroad tunnel at Laing's Nek from being destroyed, so that if war should take place in the end, by the time the remainder of our Army Corps had arrived, we should be able to move upon Pretoria without the serious loss of life which the assault of Laing's Nek, in the possession of the Boers, would probably entail."

21167. So that at that time the Commander-in-Chief had in view holding Laing's Nek with that force?—Evidently. Then again Sir Redvers Buller in his memorandum of July 6th apparently deprecated the idea of sending out as many as 10,000 men at that moment, but in his memorandum of September 5th he asked for 5,000 men for Natal. That is in a Minute addressed by Sir Redvers Buller to the Commander-in-Chief. He writes: "I think that to make Natal safe its garrison should be increased by 5,000 men. These need not be equipped with transport at once, as if they were in Natal they would set free the 10,000 men there, who have, I understand, complete transport"; and I think I am perhaps justified in adding to that, that although it appears from these Minutes that Lord Wolseley would have liked to have sent these reinforcements sooner than we sent them, he told me on the day that the decision to send the 10,000 men had been arrived at that he would "stake his reputation that after the reinforcements have arrived we shall be safe as to everything south of the Biggarsberg." I say that confidently because the statement impressed me so much that I at once wrote it to one of my colleagues; my letter was dated 9th September.

21168. I draw your attention to a note that has been handed in to us by Lord Wolseley; have you anything to say in regard to that?—I cannot recall the conversation referred to in this note; but I observe that Sir Redvers Buller is reported by the Commander-in-Chief to have said that the military authorities on the spot were the best judges, and one of the military authorities consulted was Sir Penn Symons, whose advice I have just quoted.

21169. Sir Redvers Buller replied that he had "complete confidence in Butler's ability and forethought, and as long as there were able men like Butler and Symons on the spot he did not think there was any necessity for sending out any troops in advance of the Army Corps to strengthen our position against any possible attack by the Boers on the frontiers"?—That agrees very much with the passage in the Minute of Sir Redvers Buller which I quoted just now, in which he deprecated the idea of sending the 10,000 men in advance of the main force.

21170. This conversation purports to have been in your room, but you do not remember it?—I do not remember it, but the record was evidently made at the time, and I do not question its substantial accuracy. Before I leave that question of the sufficiency of the reinforcements may I say a word upon another point, which is, that it might be suggested, and I believe it has been suggested, that these reinforcements were sufficient to take care of themselves during the interval; but that is, I am sure, not at all what was conveyed to me by my military advisers. What was conveyed to me by my military advisers was that they were sufficient to secure the safety of the Colonies, which is quite a different thing. I am not a soldier, but I never heard of sending out reinforcements to a country which might become the theatre of war merely in order that the reinforcements might successfully defend themselves against attack; they are sent there, I imagine, for the purpose of securing something or somebody.

21171. But do you mean by that that they were calculated to be sufficient to prevent the Boers from crossing the frontier?—I should say not sufficient to prevent raids and incursions, but sufficient to prevent the Colonies from being overrun.

21172. By the holding of particular posts?—Yes

21173. It has often been said that the frontier taken as a whole was so very large that it would have been impossible with a force of the kind which was in South Africa at the time to have prevented the Boers from crossing the frontier?—That seems to me obvious; if I may say so, you could not stop up all the holes, but you could do enough to prevent the Colonies from being overrun or invaded in force.

21174. Was it enough to prevent them from being invaded in great force?—Judging by the result it was not.

21175. Was there any idea at the War Office at that time that they might be invaded in great force?—I should say that the general impression was that what we had to reckon with was raids rather than invasion in force.

21176. There was not much idea in the War Office, or in your advisers generally, that an advance in force such as was made was practicable for the Boers?—I do not believe it.

21177. Looking at it now would you say that the Force that was sent was sufficient to protect the Colony in the sense you have described it?—I am not a soldier, and I do not much like giving opinions upon purely military points, but if you ask me my opinion I should say, No.

21178. Have you anything more to say about the reasons for supposing these interim measures were sufficient?—I think I have said all I want to say upon that point.

21179. Then we come to the question of whether the War Office was urged by their military advisers to make earlier preparations?—You will have seen from Lord Wolseley's minutes that we were urged to make earlier preparations. The general observation I would make upon that is, we were obliged to consider that advice with some reference to the circumstances as they presented themselves at the moment we received it. The Commission will recollect that all through the summer of 1899 negotiations were proceeding uninterruptedly with the Transvaal Government. We certainly did not regard peace as unattainable; on the contrary there were moments when we believed that we were very near a settlement which would have avoided all the misfortunes inseparable from a great war and we realised very deeply indeed that owing to the inflammable state of public opinion in South Africa we ought to strain every effort to avoid any action which was likely to precipitate hostilities. I believe the Commission have seen Sir William Butler's correspondence with the War Office. I do not think I misrepresent it when I say that throughout that correspondence there runs a note of genuine and deep alarm lest anything should be done that might make the embers which were smouldering in South Africa break into a blaze. We had also to consider that at that time public opinion in this country was not prepared for a great war or for the large expenditure in preparing for a great war. Besides that, it seemed to us that owing to geographical and military conditions nothing that we could do could have the effect of altogether depriving the Boers of the advantage of the initiative in the struggle. Whenever it came they had the advantage of being on the spot and prepared for it. It was considerations of that kind that

led the Cabinet to authorise us to strengthen the garrison in the Colonies for defensive purposes, while we were not permitted to make extensive preparations or to spend large sums of money upon the preparation of a Field Force designed for the invasion of the Transvaal. If the Commission approves I can perhaps say a word about some of these Minutes of Lord Wolseley's which are before you and on which questions of this kind throughout arise. I will do so very shortly because I am afraid of taking up the time of the Commission. First, there is a Minute of June 8th, 1899, which I have already quoted. Lord Wolseley, in that Minute, pointed out that we should require a large force in the event of war with the Transvaal, and he said that the pressing question for the Government to consider was what we should do at once to prepare for this contingency. He suggested that much could be done at once without attracting any attention provided no one in the War Office or outside the Cabinet were admitted to the secret; that always seemed to me rather a difficult condition to observe because I did not not see how we could make large preparations without taking the War Office into our confidence. Lord Wolseley then goes on to recommend a number of minor military measures designed to strengthen the South African garrison. Those measures I believe were all of them adopted, if not at the time at any rate soon after, but they are comparatively small matters and I imagine the Commission either has or can get evidence as to the extent to which those minor recommendations were acted upon. In paragraph six he recommends that we should mobilise one of our three Army Corps on Salisbury Plain. He thinks that step would probably wake up the Transvaal to the fact that England was at last serious, and then he goes on to recommend, in a passage which I have already quoted, that the operations should begin in South Africa as soon as possible so as to be over by next November. The political situation at that time was as follows: the Bloemfontein Conference had failed, but negotiations had been immediately resumed and were proceeding hopefully, not unsatisfactorily, and I see that on the 7th June—that is the day before Lord Wolseley wrote his Minute—the Prime Minister had made a statement that he was able to form a sanguine forecast of a successful issue. At any rate the moment was not one when the Cabinet was prepared to mobilise an Army Corps or to take any other steps of a distinctly minatory and provocative character still less to take any military measures with the idea that we could subjugate the Transvaal by November of the same year.

21180. Perhaps it would be convenient to refer for moment to the answer Lord Wolseley gave in connection with that Minute; he referred to it at some length, and he dealt with that question which you mentioned about the initiative. He says "Had my advice been acted upon then this Army Corps could have been in South Africa, and very possibly on the Orange River before Mr. Kruger declared war in October, and he declared war on the 11th October. There was no danger that our mobilisation of this Army Corps should have hastened Mr. Kruger's declaration of war, and this is a very important point, because I know people would at first say that if we had done so Mr. Kruger would have declared war immediately; but my answer to that is a very simple one, and it will be understood by anyone who knows the condition of things in South Africa, that Mr. Kruger could not have taken the field before the time he did, and he took the field upon the very earliest date that the Boer forces could take the field in South Africa, because all their men were mounted and were dependent entirely upon grass, and they have no grass to eat until early in October, in fact, the 10th is a very early time for grass; and, I think, that is the answer to the point I am sure would be made by people who heard my statement about this Army Corps being put down at Estcourt at the time I have mentioned. They would immediately say: 'That would have hastened the war,' and my answer to that is, that I do not think it could have done so"—I doubt whether that is quite sustainable; that proceeds on the assumption that the Boer Forces could not carry on hostilities during the months of our summer, but, as a matter of fact, the Boer Forces have remained in the field and have carried on hostilities, and I am afraid carried them on with very considerable success at all times of the year. I remember, although I cannot undertake to reproduce it very exactly, being shown a sort of review of the relative advantages for campaigning purposes of the two seasons, and my recollection is that each season has its advantages and its disadvantages; in the one season you get lots of grass and bad roads, and in the other season

you get no grass and good roads. At any rate our view was that the adoption of minatory measures, at that moment when negotiations were in full swing, would lead to the disappearance of whatever chance of peace remained to us.

21181. (*Sir Frederick Darley.*) And in that view you were supported by Sir William Butler?—I believe so.

21182. (*Chairman.*) What I wanted to know in asking that question was whether Lord Wolseley put that point of view to you, as far as you remember, at that time?—I do not remember his having done so.

21183. Because, if there was substance in it, it was a somewhat important point, was it not; it would have given you an opportunity of initiative?—You mean that upon that advice of Lord Wolseley's we might have mobilised our Army Corps on Salisbury Plain and taken the chance of its shipwrecking the negotiations?

21184. It would not have brought on a hasty declaration of war from the Boers if his position was correct?—That is a matter of opinion, but what I think is scarcely a matter of opinion is that the successful prosecution of the negotiations would scarcely have been possible if we had taken steps which obviously showed that we had made up our minds to fight.

21185. (*Sir John Jackson.*) Or to be fully prepared to fight?—I think so. I do not think that distinction was one which you could have expected the Boers to draw.

21186. You do not think that if at that time we had shown a firmer front by providing against the chance of war it would have had beneficial effects in making Mr. Kruger more reasonable?—Everyone has a right to their opinion upon a conjectural point of that kind. I remain of the opinion I have ventured to express.

21187. (*Chairman.*) Do you think that was Lord Milner's opinion also?—I do not know.

21188. (*Sir John Edge.*) Does the fact that Mr. Kruger did declare war as soon as the grass was on the veldt support your view that if we had called out an Army Corps it would not have led to peace, that although we made no great preparations for the war Mr. Kruger when his own opportunity came instead of carrying on the negotiations, declared war. Does that support your view that if we had called out an Army Corps it would not have led to peace?—I imagine that Mr. Kruger declared war when he found we were sending large reinforcements.

21189. I do not think I have made myself quite plain. It has been put to you, at least the suggestion apparently is, that if we had called out an Army Corps and put it on Salisbury Plain that might have induced Mr. Kruger not to make preparations for war, but to carry on the negotiations to an end that would be satisfactory for both parties. I say is that view consistent with the fact that although we did not call out the Army Corps, Mr. Kruger the moment he was able declared war against us?—Do you mean that that combats my view or supports it?

21190. It appears to me that it supports your view. Your view is that you were hoping at that time that you could carry on those negotiations successfully without war?—Quite so.

21191. And you felt that if you called out an Army Corps that would probably put an end to the successful carrying on of the peaceful negotiations; in support of that view it strikes me the result shows that although you did not put the Army Corps on Salisbury Plain, Mr. Kruger declared war himself when he got the chance?—Yes. I agree.

21192. (*Lord Strathcona of Mount Royal.*) May I ask when you came first to recognise that war was inevitable?—If I have to give you a date off hand I should say that war became imminent when the Transvaal withdrew their offer of the five years' franchise, on September 5th.

21193. (*Chairman.*) In what you were saying just now about the danger of precipitating war by taking the advice of Lord Wolseley were you referring chiefly to the mobilisation of the Army Corps?—And to any other measures of a distinctly minatory character. I give you as an illustration the accumulation of large magazines and stores on the line of route which would be followed by the Field Force.

21194. That is what I wanted to get at; did that include all the recommendations which were stated in your Minute of the 12th August?—Yes, all the recommendations which appertained to the preparation of the Field Force.

See Q. 8778.

The Right Hon. the Marquis of Lansdowne,
K.G., P.C.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.

26 Mar. 1903.

21195. You think even the preparations—for instance the purchase and the fitting for sea transport of horses, which was a small sum, £13,000: do you think that would have been a thing?—It might be possible to find here and there some little thing that could have been done unobtrusively, but we had to draw the line somewhere, and we drew it between the preparations for the Field Force and the preparations for the reinforcements that went out in September.

21196. (*Sir John Edge.*) Do you happen to know whether Mr. Kruger or the South African Republic had agents here in England before the war, watching what was going on?—I feel no doubt whatever that they had abundant information of everything that was going on, not only here, but also in every capital in Europe.

21197. I mean that any move towards preparing for an expedition to South Africa would be known to them directly?—Certainly. You will see in one of Sir William Butler's letters that they were watching things so closely that any ordinary move of small bodies of troops or of officers was noticed at once and created apprehension.

21198. (*Sir John Jackson.*) Do you not think that the fact that the Boers were collecting all these warlike stores, which could only be with the object of invading our Colonies, was a fair excuse for our sending out more men earlier?—If that view be accepted we should have had to assume that peace was unattainable. We did not take that view. We knew of the preparations. Of course, we are all wise after the event; but at that time it was impossible to say how far those preparations were intended for defensive and how far they were intended for offensive purposes.

21199. (*Chairman.*) You are going to deal with other Minutes?—The next Minute I have in my series is Sir Redvers Buller's Minute of July 6th. I have already called attention to his apparent reluctance at that stage to send out 10,000 men to South Africa. He gives his view of the sequence in which operations might be commenced, and I do not greatly differ from what he says upon that; but I desire to call attention to Lord Wolseley's Minute which covers Sir Redvers Buller's. In that Minute, dated July 7th, paragraph 6, he renews his recommendation that we should immediately mobilise an Army Corps on Salisbury Plain, that we should at an early date send out an Infantry Division and a Cavalry Brigade to South Africa as an open demonstration of warlike policy, that we should form magazines on the intended line of advance, that we should go to the House of Commons for a vote of credit for half a million and that we should collect 11,000 mules and 700 American waggons. There, again, I venture to give the same answer that I gave a moment ago: the negotiations were proceeding; Lord Wolseley's Minute was dated July 7th; 12 days afterwards, on July 19th, the Volksraad accepted the proposal for seven years' franchise, and the Secretary of State for the Colonies on the following day announced his hope that the new law would prove the basis of a satisfactory settlement. I do not think that any moment could have been worse chosen for an open demonstration of a warlike policy such as the Commander-in-Chief then recommended to us.

21200. On the assumption that the negotiations were *bona-fide* negotiations?—Certainly, I assumed they were *bona-fide* negotiations. Lord Wolseley's next Minute is dated August 17th, and in that he again pressed us to send 10,000 more men to Natal. As to that I point out that on the 22nd August the Transvaal Government presented to us the five years franchise proposal; to that we sent a reasoned reply—the negotiation was going on, and, rightly or wrongly, it was in our view undesirable that that negotiation should be jeopardised by any sudden exhibition of military activity. That point is dealt with in a letter of mine to Lord Wolseley dated August 20th, 1899.

21201. You put that in now?—Yes.

LETTERS FROM THE MARQUESS OF LANSDOWNE TO
VISCOUNT WOLSELEY.

Derreen, August 20, 1899.

My dear Wolseley,

Your Memorandum of the 17th has reached me.

You have probably become aware since you wrote it that the outlook in South Africa has improved. We are not yet in a position to assume that matters will be satisfactorily settled; but Mr. Chamberlain wrote to me two days ago that, while he wished to avoid relaxing the pressure, he saw no occasion for reinforcements.

I shall in any case let him see what you have written.

If our hopes are disappointed the Cabinet will have to consider the question of further strengthening the force in South Africa, and your views will, of course, come before my colleagues.

I am rather sorry that you did not put those views in writing before we all separated, and when the discussions were in progress which led to the sending of two more battalions to Natal. The position was more critical then than it is now.

I quite understand your wish that the Army Corps and cavalry division which we shall send out in certain eventualities should be exclusively British. We are all agreed as to this. But I see no reason why we should not use the 10,000 troops which India is holding in readiness, for the purpose of strengthening Natal. To send out one division of the Army Corps without reservists would, I cannot help thinking, be awkward. India is ready, and could get there first. Moreover, if your anticipation is realised, and the Orange Free State takes no measures to prevent its frontier from being violated by the Transvaal Boers, we should, I hope, certainly regard ourselves as free to go in through the Orange Free State—the route which I know you prefer. In this event we should be better off if we had not committed a part of our force to the Natal route, which might, however, be used by the Indian force to effect a valuable diversion. There are several other points about which I should have liked to ask questions, *e.g.*, the probability of an attack on the triangle from the Utrecht side by a force of 10,000 or more Boers. But I will not trouble you with these at present.

Yours sincerely,
(Initialled) L.

There is a further Minute of Lord Wolseley's, dated August 24th, in which he once more pressed us to have recourse to a display of force; that is the Minute in which he combated the view that it was desirable to send reinforcements from India. That Minute is dated 24th August, and, as I said just now, on the 22nd, two days before, we had received the proposal for a five years' franchise, so that the same considerations which I have ventured to urge apply to that Minute also. I have dealt with that Minute in my letter to Lord Wolseley of August 27th, which I also put in.

Derreen, Kenmare, August, 27th, 1899.

My Dear Wolseley,

Thanks for your letter of the 24th.

Your Minute was sent at once to Mr. Chamberlain, and a copy has reached Lord Salisbury by this time.

My own view is that we ought not to send further reinforcements to South Africa until it has become clear that the last proposals made by the South African Republic cannot be accepted as a basis for discussion.

It is hard to say whether they are made to us in good faith. The concessions may prove to be illusory, but in appearance they are a very great advance both upon the Bloemfontein proposals and upon the subsequently revised scheme. They seem to me to merit benevolent examination.

But the conditions as to suzerainty and future non-intervention are obviously inadmissible, and, if literally persisted in, will render a peaceful solution, to my mind, impossible.

I am, however, not convinced that they will be pressed as they stand. Krüger is trying to save his face, and we cannot be surprised at it. Everything depends upon his attitude when he is told that the suzerainty cannot be abandoned, nor the right of intervention on behalf of the Queen's subjects if they are ill-treated.

While we are uncertain upon this point, I should certainly avoid "hurrying the pace, and forcing on hostilities." We might, I think, precipitate them by an ill-timed turn of the screw.

On the other hand, it is clear that we must be ready to send reinforcements whenever we are told that the negotiations have broken down, and neither you nor I can judge how soon this may be.

I still lean towards the idea of sending the first instalment from India, and I feel sure that the Government of India would send us good battalions. It has been getting its contingent ready for some time past, and could, I believe, supply it more cheaply and more expeditiously than we could supply ours. I have asked for information on this point.

By using Indian troops you would have your own army corps intact, for use on whichever line might be selected. I say this because it may be possible to compel the Orange Free State to declare itself against us

*The Right

G.C.I.E.*

and in that case you would, I take it, advance through it and not *via* Natal. You ought to be in *utrumque paratus*, with a plan for each contingency.

I am glad you were pleased with what you saw on Salisbury Plain. Will you bring up the question of retired officers for Militia and Volunteer Battalions after the holidays?

I am all for going as far as we can in this direction.

But do we not already offer extra pay for such officers?

If South African affairs become hotter I shall, of course, come over to the War Office at once.

Yours sincerely,
(Initialled) L.

I call attention to my statement that it was desirable that the Indian troops should be taken upon the ground that they would leave Lord Wolsley's Army Corps intact when he had to send it out afterwards. I think that is an argument deserving of consideration—I mean that we should send the Indian troops instead of sending a portion of the Army Corps without its reserves.

21202. That is what happened—the Army Corps was treated as a separate thing afterwards?—Yes. Every battalion got its reservists, and not a battalion had been broken into as would have been the case if we had previously vamped up composite battalions for the purpose of sending out reinforcements.

There is another short Minute of Lord Wolsley's dated September 1st, 1899, in which he calls attention to the necessity of certain stores, equipment, saddlery, harness and so on. That was, I need not say, respectfully considered; it had, of course, to be examined by the department responsible for these things, which is not the department of the Commander-in-Chief. For example, there is, I notice, a demand for red serge frocks. Now no red serge was used during the whole campaign at all, and I do not believe for a moment that this proposal would have been supported if it had been examined in the department.

Then follow three very important Minutes, two of them by Sir Redvers Buller and one by the Commander-in-Chief. The first in my collection is that addressed to Lord Salisbury on the 5th September 1899. I shall have something to say bye and bye as to the necessity for Sir Redvers Buller taking the somewhat unusual step of applying direct to the Prime Minister instead of to the Commander-in-Chief or the Secretary of State—but I pass that by for the moment. The suggestion that runs through it is that the military and the diplomatic or political forces require bringing into line, and that the diplomats were proceeding to an ultimatum without reference to the military. I do not think that position of Sir Redvers Buller's can be sustained. He was perfectly aware of what was passing; if he was not aware it was his own fault, as he had ample opportunities of making himself aware. Simultaneously with that Minute to the Prime Minister there was Sir Redvers Buller's Minute of the same date addressed to the Commander-in-Chief. There are a number of points in that about which I should like to say something. He begins by saying that he has not troubled the Commander-in-Chief or the Secretary of State with any questions since he was informed that he was to have command of the Field Force, because he thought that the negotiations which were being conducted with a view to avoid war ought not to be hampered by any conditions. I do not quite know what the meaning of that sentence is, but at any rate that suggestion is a different suggestion from another suggestion of Sir Redvers Buller's that he had been kept in the dark and had been given no opportunity of making his views known to the War Office.

21203. What have you to say about that position of Sir Redvers Buller's?—I would like to deal with that rather fully in a moment.

21204. I mean as to his being kept in the dark and having no opportunity?—He says, with perfect truth, that an expedition against the Transvaal is not a simple matter, that it entails the use of a large force and of very considerable transport, and that that transport has practically to be created as the expeditionary force is formed. Nobody ever contested that; in fact, I think when you look at that Minute of mine which I wrote to the Cabinet and which I have put in, you will see we realised very fully indeed that these preparations were formidable and that they would take a considerable length of time. Further on he suggests that we had never invited the local military authorities to tell us what troops they required for the protection of the Colonies. That is not so. We had Sir Penn

Symons' opinion as to Natal; and as to Cape Colony, Sir Redvers Buller himself had very distinctly expressed the opinion that no hostile acts, at any rate on a large scale, were to be anticipated. Then he proceeds with a substantive proposition that in order to make Natal safe its "Garrison should be increased by 5,000 men. These need not be equipped with transport at once, as if they were in Natal they would set free the 10,000 men there who have, I understand, complete transport."

21205. I refer you again to the note which I drew your attention to before of the conversation in your room; I think Sir Redvers Buller deals with the whole question you are now referring to?—What was the date of that?

21206. July 17th; Sir Redvers Buller's opinion was given by Lord Wolsley in the note which I referred you to before?—Quite so; that was, of course, of earlier date than this.

21207. (*Sir George Taubman-Goldie*): It is not necessary to labour your point because Sir Redvers Buller has already stated there that there were sufficient forces?—Thank you. Then comes Lord Wolsley's Minute of September 5th. That Minute was apparently occasioned by Sir Redvers Buller's appearance on the scene with his two Minutes of September 5th, and it contains several statements which I can hardly leave unchallenged. For example—he asserts that, "we have lost time and given to the enemy the initiative; he is in a position to take the offensive, and by striking the first blow to secure the advantage of winning the first round." Our position, as I ventured to say just now, was that nothing we could do could deprive the Boers of the initiative; they were on the spot, and they could strike the first blow whenever it pleased them to do so. Lord Wolsley goes on to say that he has not been told whether the Indian contingent had been ordered to Natal. He had not been told because the Cabinet did not decide to send it until September 8th, three days after the date of the Minute. He urges the increase of our military forces in South Africa, proposing to send a brigade of Guards there; that is on September 5th, and the Commission will remember that that was the very date on which the Transvaal withdrew the offer of the five years' Franchise; the Cabinet was called together, and on September 8th we agreed to send out reinforcements of the strength advised by Lord Wolsley in the Minute from which I am quoting. But I can scarcely accept Lord Wolsley's statement towards the close of that Minute that, "the Government are acting without complete knowledge of what the military can do, while the military authorities on their side are equally without full knowledge of what the Government expects them to do, nor are they given authority to make such antecedent preparations as will enable them to act with the least possible delay." I venture to say, on the contrary, that we were acting with complete knowledge of what the military could do, and that is shown by the Minute of August 12th, which, as I have said, was prepared with the assistance of the Commander-in-Chief and the officials of his Department. That Minute shows that whether our position was right or wrong, we did know what the military position in South Africa was.

21208. (*Chairman*.) That is the one side; what about the military authorities being without full knowledge of what the Government expected them to do?—I should like to deal with that when I come to the question of the plans of campaign. Nor do I admit that the Government was under a false idea of the rapidity with which we could act. That, I think, is disproved by the Minute of August 12th. However, as I said just now, these three Minutes coincided with the withdrawal of the five years' Franchise proposal, and thereupon we at once proceeded with the reinforcements suggested by the Commander-in-Chief.

There is one more Minute of Lord Wolsley's which I desire to refer to at this point, and that is the Minute of January 13th, 1900. I may say that Minute was written spontaneously by Lord Wolsley, and without any suggestion from me. In that Minute Lord Wolsley shows succinctly the steps taken before the despatch of the Army Corps to strengthen the combined garrisons of Cape Colony and Natal. Those garrisons had, you will remember, been already somewhat strengthened, but between August and October we increased the strength of cavalry from two regiments to five, the strength of the Artillery from three field batteries to nine, and the strength of the Infantry from six and a-half battalions

26 Mar. 1903.

to seventeen. Then in paragraphs 5 and 6 which follow Lord Wolseley, gives an extremely graphic account of the manner in which mobilisation proceeded. He goes on to show how when more troops became necessary we mobilised and sent out a fifth division, then a sixth, then a seventh. At the time he wrote, the mobilisation of the eighth division was proceeding, and he points out that the Irregular Troops dealt with in the previous paragraph represent in round numbers 75,000 combatants of all ranks, besides a large force of Royal Engineers and the 22,000 men previously in South Africa. This army, Lord Wolseley says, was sent from home complete in military staff as well as in medical transport and supply services, and he goes on: "In preparing, equipping and despatching this large body of men the machinery of mobilisation and embarkation has worked without a serious hitch," and at the conclusion of his paper he says: "I have no hesitation in saying that no army has ever left our shores composed of finer soldiers than those of which our army now in South Africa consists. All are seasoned men. There are no recruits or youths under 20 years of age among them. Had we not possessed the Army Reserve, the outcome of our short service system, it would have been impossible to have sent to South Africa the Regular Army now serving there; indeed I would go further and assert that at no previous period of our history that I am acquainted with could England have sent such an army into the field beyond the seas." That was an unsolicited testimonial from a great soldier who is also a very keen critic, and I venture to call the attention of the Commission to it and to submit to them that whatever our failings, which were no doubt very numerous—whatever those failings were at any rate we were able to produce something in the way of a great British force which was not altogether unworthy of respect.

21209. Have you dealt now with all the Minutes?—Yes.

21210. You reserved your observations with regard to Sir Redvers Buller's appeal to the Prime Minister?—I understand Sir Redvers Buller suggests that the 10,000 reinforcements were despatched in consequence of his Minute to the Prime Minister; they were despatched because the Boers withdrew the offer of a five years franchise. The reinforcements, in fact, did arrive in time, as Lord Wolseley says in the Minute from which I have just quoted. They arrived before war broke out. Would their earlier arrival have made a difference? Of course that is very much a matter of conjecture. We are inclined to contend that their earlier arrival might have meant earlier hostilities. I will not labour that point because I have made it two or three times, but considering what the position of the negotiations was it seemed to us undesirable even to send off those 10,000 men so long as the five years franchise offer was open. That has reference to the earlier despatch of the reinforcements, but then there is the question of the earlier despatch of the field force itself, which is another matter. If we could have dropped the field force fully equipped from a balloon without anybody knowing anything about it in South Africa, that might have had very satisfactory results, but as the Commission knows mobilisation means a Proclamation of national emergency, it means Debates in the House of Commons, and it means Votes of Credit. Again mere mobilization would not really have brought you very much nearer to the complete preparation of your Army Corps, because what you had to do was not only to mobilize but to collect your transport, equipment, magazines and so on. Ought we then to have done that sooner? I think your Lordship asked that question earlier in my examination. We had looked the thing in the face, we knew that by holding our hand there was a period of three months which must elapse before the field force was ready to take the field. Were we justified in taking that risk? I submit we were, because we were told by our military advisers that in the interim the Colonies were not exposed to any serious danger. We were led to believe that during that period of three months no serious harm would come to the Colonies. On the other hand, if we had collected say the 14,000 mules which were specified as necessary, can there be any doubt that we should have brought on war sooner than it came, and probably before we could have got the 10,000 reinforcements out to South Africa? The 14,000 mules reminds me that Sir William Butler objected to buying 1,300 mules, on the ground that a step of that kind would create dangerous apprehensions. How much more would such apprehensions have been created if we had collected 14,000?

21211. (*Sir Frederick Darley.*) The contract for the 1,300 mules was cancelled?—Yes, that was a contract I think under which they were to be delivered when required; is there not a distinction between that and the actual collection of a great number of these animals? If I might sum up my argument I would say that in my view nothing we could do would have deprived the Boers of their initiative, that it is not clear that the earlier arrival of the field force, or of part of the field force, would have made any difference, and that if the delay did carry with it any disadvantages it was worth running the risk in order to avoid prematurely bringing on a war which up to the last we hoped to avoid.

21212. (*Chairman.*) Practically you base your defence of that position on the political situation at the time?—On the political situation at the time coupled with the fact that our advisers led us to believe that we could secure the safety of the Colonies in the meanwhile by increasing the South African force to, I think, 23,000 men altogether.

21213. Which you say you were able to do before the actual outbreak of war?—Yes.

21214. That deals with the preparations which your military advisers proposed in 1899; you have been speaking of that all through?—Yes.

21215. Referring once more to the Intelligence Department papers of earlier dates, do you not think that it might be argued from them that when the Boers began to make large preparations, which they did immediately after the Jameson raid, certain other preparations ought to have been made in the Colonies when war was not in the same way imminent?—We did increase the garrison, although not to a great extent.

21216. To the extent of a couple of battalions?—More than that; but the increase was not large.

21217. Not anything in comparison to the accumulation of stores which the Boers were making at that time?—No.

21218. Is it not arguable that the real difficulty began then?—I think it is arguable.

21219. But, as I understand your evidence earlier, those papers were not distinctly brought before you by your military advisers at that time?—I am most anxious not to be unfair to my military advisers, and I have no doubt that from one source or another I was aware that advice of that kind had been collected by the Commander-in-Chief's staff, by which I mean the intelligence branch; but I cannot call to mind any proposal on the part of the Commander-in-Chief for a large strengthening of our position in South Africa as an antidote to the Boer preparations. In a Minute of Lord Wolseley's in 1896—about which I may have something to say by-and-bye—he dwelt upon the advantage of keeping rather more troops in South Africa, partly to steady the Boers, and, also, because he thought that a small force held in readiness there would be useful for offensive purposes in parts of the world other than South Africa.

21220. As a central station?—As a central station.

21221. But as a distinct proposal from the Commander-in-Chief, as your principal military adviser, you had nothing before the preparations advised in 1899?—I cannot call any such proposal to mind, but you have had the Commander-in-Chief before you, and I have no doubt he would tell you whether that was so or not. The only earlier demand which I can remember is that embodied in Lord Wolseley's Minute headed "The Strategical Importance of the Cape." My copy is not dated, but it is an enclosure in Lord Wolseley's Minute of the 22nd February, 1896, and in that, Lord Wolseley proposed to add to the troops in South Africa one regiment of cavalry, one battery, and two battalions. That was all.

21222. For all the purposes you have mentioned?—Yes, I think I gave an accurate description of it.

(*After a short adjournment.*)

21223. (*Chairman.*) We have got to the question *See Q. 21300.* of the time of the preparations. I think you have spoken to that, and there is just one further question I would like to ask you on that subject still: you have explained why the Government did not take any military offensive steps while the negotiations were proceeding, as you had hopes of a successful issue, but you mentioned the date of September 8th, as a definite date. Were there the same reasons on September 8th for not giving orders for preparations?—There was a

G.C.M.G.,
G.C.I.E.*

26 Mar. 1903.

Cabinet on September 8th, and we then decided to send the reinforcements. There was another Cabinet, I think, on September 22nd, and it was at the latter Cabinet that we decided to commence expenditure on the field force.

12124. Yes, we have had the date of 22nd September given to us by many witnesses as the date when the sums required for preparations mentioned in your Minute of August 12th were authorised to be expended?—Yes.

12125. But on September 8th did you not send a definite despatch to the Transvaal withdrawing the previous offers.

(*Sir George Taubman Goldie.*) And saying that you would formulate your own policy?—Yes, there was a despatch of that kind on that date.

12126. (*Chairman.*) Would not that have been a reasonable date at which to have given the orders for the expenditure of the money?—We proceeded of course upon the assumption that all that was urgently and really necessary was the measures for securing the safety of the Colonies, and it should be remembered that no expenditure on account of the Army Corps would have been of any use unless we had set to work the whole of the machinery for the preparation of the Army Corps, that is, collection of the transport, the mules, and so on. We held our hand during a few days before taking that larger step, but upon the assumption that the more moderate measure was sufficient to secure the Colonies in the interim.

12127. War must have appeared very imminent on September 8th?—Much more imminent than before.

12128. So that if the orders for the expenditure of the money had been given then instead of on the 22nd it would have saved a fortnight?—But supposing we had saved a fortnight what difference would that have made? We actually authorised the expenditure for the Army Corps on the 22nd September; according to our calculations with which you are familiar, and which are set out in my Minute of August 12th, the Army Corps would not have been fit to take the field until December 23rd. But you will remember that three out of Lord Methuen's four battles were fought in November, the fourth battle was fought in the early days of December, and General Buller's action at Colenso was fought on the 14th or 15th December. All of these collisions had taken place before we could under any circumstances have had the Army Corps ready.

12129. That only means that you were better than your prophecy?—No.

12130. You got the Army Corps into South Africa earlier?—But it was not fit to take the field.

12131. Then if the preparations had been ordered a fortnight earlier it would have been more fit to take the field?—A fortnight would not have cleared you.

12132. But it would have meant the advantage of a fortnight?—Well, it would have meant the advantage of a fortnight.

12133. That is the measure of advantage which would have been gained?—Yes.

12134. We have been told there was no plan of campaign prepared in the War Office, and each General, I think, has told us that he received no instructions?—I think it is correct to say that no formal plan of campaign was drawn up in the War Office; on the other hand, it cannot be doubted that the Generals knew perfectly well what they were going to South Africa for. I do not know whether the Commission has taken evidence upon that point, but I am under the impression that it is by no means the rule that a General dispatched upon an errand of the kind is furnished with full and precise instructions. The objects which we had in view were perfectly well known to Sir Redvers Buller, and as to the means by which those objects might best be accomplished the only point that was in any doubt was the question of the line of advance, whether it should be through Natal or by the Orange Free State. As to that I have already given some evidence; but the Commission has probably noticed, that in the view of the Commander-in-Chief, who, after all, was mainly concerned in a matter of that kind, it was desirable that as wide a discretion as possible should be given to the General in command of the force. You will see in Lord Wolseley's Minute of June 8th that he says: "The general plan of campaign to be adopted is one that must thoroughly meet with the views of the General Officer selected for the

supreme command. There are, practically, only two lines of advance for an army into the Transvaal"; and in his later Minute of July 7th, again, after considering the two lines of advance, he says, that "should the Free State help the Transvaal against us he presumes Sir Redvers Buller would not shrink from using the Free State as the line of advance upon Pretoria." I think that shows that what was present to Lord Wolseley's mind was that Sir Redvers Buller would have the widest discretion as to the plan of campaign to be adopted.

12135. I think that is so, and Sir Redvers Buller, *See* in an answer he gave to us, said: "It was well understood between Lord Lansdowne, Lord Wolseley and myself, that the intentions with which I left England were to land the three Divisions at East London, one Division at Port Elizabeth, and one Division at Cape Town, and to concentrate them upon the two bridges at Norval's Pont and Bethulie, with a view to advance through the Orange Free State. That was the original plan of campaign?"—Quite so.

12136. Then he was asked whether it was not the *See* case that Lord Wolseley said that "there were no Q. 1 instructions given," and that he "went out with a free hand," and he said "there were no instructions, and I went out with a free hand on the understanding that I was going to do a definite thing?"—That I think very correctly expresses the facts of the case.

12137. That is not quite the same as a plan of campaign, which might be formulated, say in the Intelligence Department or by the highest military authorities in the country before an expedition starts?—That I think was really a matter for discussion by the soldiers with the soldiers, but I am prepared to say that at no moment did Sir Redvers Buller suggest to me that he was at a disadvantage because he had not been supplied with instructions or a plan of campaign. He was constantly in communication with the Commander-in-Chief, with the Director of Military Intelligence, and with other members of the head-quarters staff, and I think I am justified in saying that when he left England he did not do so under a sense of any disadvantage, because at his very last interview with me on the 10th October when he took leave of me he told me that he expected to start, that is to commence his forward movement, about two days before Christmas, that it would take him probably one month to pass through the Orange Free State, and after that 14 days to get to Pretoria. Now I do not for a moment suggest that this was anything like a formal assurance on Sir Redvers Buller's part that he saw his way to doing exactly what he then anticipated, but I think it is fair that I should quote it as showing that he had thought the thing out and that he regarded the accomplishment of his object within those dates as at any rate within the bounds of possibility. This interested me very much. I thought I should like to see whether he was able to make good his own expectations, and I jotted those dates down in my pocket book immediately he left the room.

12138. Then you do not consider that it is necessary that the Staff at the War Office should, when an expedition starts, supply a general plan of campaign, which of course is quite different from entering into the details of the operations which the General Officer in command must undertake on the spot?—That is rather a question for the soldiers; upon this particular occasion I cannot see that anybody was prejudiced by the absence of a definite plan of campaign.

12139. May I give you a quotation which Lord Wolseley gave us from Von Moltke. Von Moltke says in the official account of the Franco-German war, page 50, volume 1: "No plan of operations can with any safety include more than the first collision with the enemy's main body. It is only the laity who believe that they can trace throughout the course of a campaign the prosecution of the original plan arranged beforehand in all its details, and observed to the very close. The Commander-in-Chief most undoubtedly will, in spite of the changing fortunes of war, always have the main object of the campaign before his eyes; but the means by which he hopes to attain it cannot be sketched out with certainty beforehand." That draws the distinction which I was endeavouring to draw between the main object which might be sketched out and the details which of course must be left to the Commander-in-Chief in the field?—The main object in this case, I suppose, was to compel the submission of the two Republics.

12140. (*Sir Frederick Darley.*) To reach Pretoria?—

The Right Hon. the Marquis of Landsowne.
K.G., P.C.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.

26 Mar. 1908.

To reach Pretoria, which at that time was regarded as likely to determine the issue of the campaign.

21241. (*Chairman.*) What I conceive was meant was that an expedition would be sent out with a general plan of the campaign but of course with discretion to the general officer to apply it as circumstances dictated, but as I understand it there were no written instructions whatever?—No, not that I am aware of.

21242. We were told by one witness—I have some compunction in mentioning this—that in India it would be different?—My impression is to the contrary. I would suggest that the commission should ascertain whether in the case of Lord Roberts' numerous operations on the Indian frontier he received any definite instructions. I am under the impression that he did not.

21243. No plan of campaign laid down for the attainment of the main object?—That is my impression.

21244. What we were told was that the Commander-in-Chief in India would have submitted a plan showing the course of the operations worked out by the Intelligence Division under him and the Quarter-master-General—he would have submitted that to the Government before an expedition was sent out; is not that your experience?—I am afraid I cannot answer that.

21245. At any rate you think that the campaign was not prejudiced by the course which was taken on this occasion?—I do not think so for a moment.

21246. Is that all you wish to say about the plan of campaign?—That is all.

21247. As to Sir Redvers Buller not being taken into confidence by the War Office, which is the statement he has made?—My attention has been called to a statement contained in the summary of Sir Redvers Buller's evidence to that effect. I think Sir Redvers Buller is under a complete misapprehension. I should like in the first place to dwell upon the extreme unlikelihood of the Government having deliberately withheld from Sir Redvers Buller anything that it was desirable that he should know; after all he was selected by the Government; he carried our fortunes and it was not very likely that we should keep him in the dark systematically, which is what I understand he alleges. We warned him in good time that he was to be asked to take command of the force, with the object that he might have ample opportunity of considering on what lines he should conduct these operations. I also wish to say that upon the occasion when I intimated to Sir Redvers Buller that he had been designated for the chief command I went out of my way to tell him that from that date anything that the War Office could supply him with in the way of information was his to ask for. If he wanted information and did not come for it, I submit that he had only himself to blame.

21248. Of what date do you speak—in June?—I think it was in June. It seems to be assumed that there was a great deal of secret political intelligence which was within our knowledge and which was not within his, and which ought to have been imparted to him. That was not at all the case; everything that happened during the course of these negotiations appeared from day to day in the columns of the newspapers; there was really nothing that we could have imparted to him which he could not derive from the ordinary sources of information. He certainly had access to me, and as a matter of fact, he did on several occasions come to me at the War Office, although not often. He certainly had access to the Commander-in-Chief, and to the Intelligence Branch, and it is also to be remembered that Colonel Stopford, who was designated as his Military Secretary, was at the time in charge of the Mobilisation Department in the War Office. Sir Redvers Buller could certainly have found out through him what was happening in the War Office; but I am bound also to say this, that Sir Redvers Buller's position in the War Office, although he had ceased to be a member of the Headquarters Staff, was such that he really could have obtained from anybody anything he wanted in the way of assistance or information. He had been, as the Commission knows, for years in a quite exceptional position of authority in the War Office; he was Adjutant-General when the Duke of Cambridge was Commander-in-Chief, and at that time a great part of the work of the War Office was really conducted by Sir Redvers Buller, and by him alone. I say, having served in the War

Office with Sir Redvers Buller, and knowing his relations with the War Office staff, that there was not a room in the War Office that Sir Redvers Buller could not have walked into whenever he pleased with the certainty that whatever assistance he could get in that room would be given to him without demur. I have known Sir Redvers Buller for some time, and it never occurred to me that he was a particularly diffident person, or very easily intimidated, particularly by civilians. Therefore, if I may say so, coming back to a point which you mentioned just now, the suggestion that Sir Redvers Buller was, so to speak, boycotted at the War Office, and that it was because of that that he had to find out the Prime Minister's Private Secretary and appeal through him to the Prime Minister, seems to me to be a rather preposterous representation of the facts—I cannot put it more gently than that.

21249. As a matter of fact there was—and you have already referred to it—a Minute of his that went to the Prime Minister?—Yes, a Minute which might perfectly have been written earlier, and which might perfectly have been addressed to the Commander-in-Chief, or, if he preferred it, to me.

21250. Have you anything else to say with regard to that procedure?—No, I have not.

21251. At any rate there was no intention of yours to deny him any amount of your confidence?—I cannot put it too strongly that it was, not only far from my intentions, but I think it would have been a monstrous thing if, having invited Sir Redvers Buller to undertake this extremely important command, I, or anybody under me, had stopped short of giving him all the assistance that could possibly be afforded him. At any rate, if he believed that assistance of that kind was being withheld from him, I venture to suggest that he ought to have spoken or written to me, which he might have done at any moment during the summer.

21252. Was there any difficulty about officers appointed to Sir Redvers Buller's staff?—I noticed in the same summary of evidence, I think, a suggestion that officers were imposed upon Sir Redvers Buller. As to the selection of his staff, of course, the selection of the individual officers rests mainly with the Commander-in-Chief and the Military Secretary, and not with the Secretary of State for War; but I have excellent reasons for knowing that Sir Redvers Buller was freely consulted with regard to the composition of his staff. I say I have excellent reasons, because two years ago I became aware that this complaint was made that Sir Redvers Buller had not been sufficiently consulted about his staff. Now I had a very distinct recollection of an interview between Sir Redvers Buller and myself, in which the question of his staff was referred to, and his words, which I am sure I can quote with substantial accuracy, were that if he could not win with that staff he did not deserve to win. I did not, however, like to trust to my own recollection alone and I consulted Sir Coleridge Grove, who was Lord Wolseley's military secretary, on the point, and Sir Coleridge Grove supplied me with a memorandum which I propose to put in. It is not very long. Would you like to have it read?

21253. Perhaps, if you would not mind?—"Sir Redvers Buller was frequently consulted by the Commander-in-Chief as to the composition of the staff for South Africa and his wishes were always acceded to. I have heard Lord Wolseley say to him on several occasions that as he (Sir R. Buller) was to command the expedition, he should have on his staff any man he wanted. When the staff list was in a fairly advanced condition I gave Colonel Stopford a manuscript copy of it to take down with him to Aldershot, where he was going to stop with Sir R. Buller. Colonel Stopford was at that time designated as Sir R. Buller's military secretary, and I asked him to ascertain the latter's views on the composition of the staff. He brought me the list back with a few small changes and no more proposed. All these were carried out. Later on, when the list was practically complete and in print, I asked Sir R. Buller to come to my rooms here. He did so, and I gave him the full list asking him to look through it, and say whether he would like any changes, additions, or names removed. He took the paper to a standing desk in one of the windows and read it carefully through from end to end, taking some time in doing so. He then returned it to me, saying: 'Well, if I can't win with that staff I ought to be kicked.' After this he spent some time in my room going over the names and discussing the various qualifications and points of their owners. He also suggested one or two changes which were carried

out. They were quite minor ones. It is true that Sir R. Buller interfered very little in the selection of the staff for South Africa. In the main he accepted the names proposed from here. But all that was being done was known to him, and he was told on several occasions that any wish of his with regard to the staff would be carried out. C. Grove, M.S., War Office, March 7th, 1900." So much as to the staff generally; but I notice that at page 13 of the summary which you were good enough to let me see he dwells particularly upon the manner in which Sir Charles Warren was imposed upon him. He says: "On that evening I debated with myself whether or not I should relieve Warren of his command; but the question was less simple than it appears at first sight. Had he been sent out to me on the same footing as any other officer I should not have hesitated, or rather I should never have entrusted him with this command at all; but he had been sent out to me as my appointed Second in Command and with orders from the Government that he should supersede Methuen; and though I had successfully combated this order as to Methuen another equally precise had been substituted for it—namely, that wherever employed General Warren should hold the position to which his rank entitled him. It is true that I disapproved of his first two days' work in the first command that he had ever held under me, but I did not think that this was sufficient justification for his removal in the face of the direct instructions which I had received from the Secretary of State for War." That is clearly a suggestion that the Secretary of State for War had imposed Sir Charles Warren upon Sir Redvers Buller, and that for that reason he (Sir Redvers Buller) was not at liberty to deal with Sir Charles in the same way as he might have dealt with other senior officers in his command. Now, I want to lay the facts before the Commission. Sir Charles Warren was sent out by Lord Wolseley as a Divisional Commander in charge of the 5th Division; subsequently to that it became clear that it was necessary to appoint a Second in Command to Sir Redvers Buller in case any misfortune should happen to him. We sent Sir Redvers Buller a telegram on the 30th November that the time had come for a decision as to the appointment of a Second in Command to himself, and that we inclined decidedly towards General Warren and we inquired what his present view was. We received a telegram dated 1st December, in which Sir Redvers Buller, after passing in review the qualifications of the different Generals ended by expressing his agreement in the appointment of Warren in the following words: "I therefore agree in the appointment of Warren." All I wanted to bring out was that there was no question of sending orders from home under which Warren was to be stereotyped in a particular position whether he did well or badly in that position.

21254. Is that all about that point of the officers?—That is all.

21255. Sir Redvers Buller has also stated that there was some interference from the War Office as to the disposition of the troops after he held the command?—That is a complete misapprehension; I would ask the Commission to consider some more of the telegrams which are in the collection which they possess. In the first place, at the outset and before Sir Redvers Buller had reached South Africa, we sent this telegram to the General Officer commanding in Natal, dated 27th October, 1899. "Please understand we expect you to act strictly in accordance with the military requirements of the situation. The Governor is within his right in directing your attention to political consequences of your arrangements, but the responsibility for the decision rests entirely with you. You may find steps necessary which may run counter to public opinion here and in the Colony, but we shall unhesitatingly support you in adhering to arrangements which seem to you militarily sound." I quote that because that telegram, which was sent with the approval of the Cabinet, shows that in our view military considerations were always to come first.

21256. That was to Sir George White?—Yes. At that time Sir Redvers Buller must have been on his way out.

21257. He arrived on the 31st October?—I think it is not unfair to suggest that that telegram, which contained a very important declaration of policy, would have been shown by Sir George White to Sir Redvers Buller on his arrival; I say that for what it is worth.

21258. Of course, Sir George White was in Natal when Sir Redvers Buller arrived at the Cape?—Yes, but it would have gone through the General Officer of Communications.

21259. He would have seen it?—I presume so. Then on the 31st October, Lord Wolseley, the Commander-in-Chief, telegraphed to Sir Redvers Buller as follows: "Issue to General White, who is now one of your Generals, whatever orders you may think best. White's telegrams lead me to fancy that he means to hold on and allow himself to be besieged in Ladysmith. Is he wise to do this, which will place all Natal at the enemy's mercy? I warned him before you left of what seemed to me the importance of Colenso, where I wish he was now with the river rising from the rains, but you are the best judge, and we all trust to your judgment." That was a personal telegram sent by Lord Wolseley, although with my knowledge, and I ask the Commission to observe that it was sent not by the civilians but by the Commander-in-Chief, and that even the Commander-in-Chief was ready to defer to Sir Redvers Buller's judgment upon all these questions of plans and military dispositions. On the 1st November another telegram was sent: "Secret. We are not in a position here to form adequate judgment of recent military operations. Please remember that you are absolutely responsible for the distribution of all subordinate commands, and that no consideration must be allowed to stand in the way of putting the most efficient men in places of the greatest difficulty." That telegram I should say was the outcome of a discussion in the Defence Committee of the Cabinet, and it was intended to strengthen Sir Redvers Buller's hand and make it absolutely clear to him that we should support him in appointing or removing his Generals according as he thought right. There are later telegrams from Sir Redvers Buller to the Secretary of State, dated the 8th November, and from the Secretary of State to Sir Redvers Buller of the same date, showing the desire of the military authorities at home to be guided by Sir Redvers Buller as to all arrangements connected with appointments to high commands in South Africa. There is also the telegram of the 5th December, 38 E which points in the same direction. I now come to a telegram upon which I must dwell for a moment, namely, telegram No. 51, of the 14th December, from the Secretary of State to Sir Redvers Buller, running as follows: "Warren has been ordered by the Commander-in-Chief to proceed immediately upon landing to take command of Methuen's Force. The Commander-in-Chief considers it desirable to employ Methuen in future on lines of communication, but leaves his disposal to you." That is an extract. The Commission will observe that in this case the Commander-in-Chief did in a sense intervene, but of course at that moment Sir Redvers Buller's hands were fully occupied in Natal, and Lord Wolseley had probably as good an opportunity as Sir Redvers of judging of the fitness of the different commanders; but the importance of this telegram is this, that it is apparently upon that telegram and upon that telegram alone that Sir Redvers Buller has founded a complaint that he was interfered with from home in reference to his military dispositions in South Africa. The alleged act of interference is described in page 9 of the summary. It is there stated that the Government had already ordered the Fifth Division to Modder River and the same theory is developed in the answer to 15,328, in which the witness expresses his opinion that "the Government, in the shape of the Secretary of State for War, was committed to having recommended and enforced upon me—in fact ordered upon me—a policy which entailed sending that division to Kimberley and I had to overcome that. I was in the position of a man who had never been consulted at all, whose advice had never been taken and whose advice usually had been rather curdly, not very politely refused." Now, as to the general statement of want of courtesy and curt refusals, I decline to go into that unless I am supplied with specific instances of such treatment. Here, however, a specific instance is alleged, and it is, so far as I am aware, the only attempt made to support the charge. Now, the facts as to the Fifth Division are these: The Fifth Division was on its way to South Africa, and I say positively that it was not earmarked for service in Cape Colony or elsewhere. It was at the disposal of the General Officer in Command, and General Buller himself without any pressure from anybody, evidently contemplated employing that Division in Cape Colony, because in his telegram of 11th December, 1899, he makes this remark: "Further I have always looked forward to employing

the Fifth Division in the midland districts." Then came the Battle of Magersfontein, and the decision that General Warren should replace Lord Methuen, and apparently Sir Redvers Buller seems to have assumed that because Sir Charles Warren had been directed to take over the command from Lord Methuen, the Fifth Division was therefore necessarily to be tied to Sir Charles Warren, and to be employed whether or not upon the Kimberley line, and Sir Redvers Buller's suggestion is that after the reverse at Spion Kop, when he stood urgently in need of troops, it was necessary for him to force the hand of His Majesty's Government by the somewhat clumsy threat that he would be obliged to let Ladysmith go unless he was allowed to get the Fifth Division. We never intended to prevent him from using the Fifth Division as he might think best. So far as I am aware that is the solitary case which he is able to put forward in support of the extraordinary statement which he made to the Commission.

21260. (*Viscount Esher.*) With regard to those last words you read of his in which he says that his advice has usually been rather curtly and not very politely refused, does that collection of telegrams you have been reading from contain, as far as you know, all the telegrams which passed between you and Sir Redvers Buller?—I believe it to be a complete collection.

21261. (*Chairman.*) I find in that collection telegram No. 60 from the General Officer in Command at the Cape, Sir Forestier Walker. He advised you on the 16th December that it was intended that "the 10th Brigade and divisional troops of the 5th Division shall be assembled at Orange River, and 11th Brigade at De Aar Junction. Then the former march and the latter rail to Modder River to join Methuen, whence relief of Kimberley will be proceeded with under Warren's orders"; but it does not appear, as far as we have been able to ascertain, who intended that. It is intended; but we have not been able to discover any evidence, at any rate, that it was intended from home?—No evidence at all. I suggest it was the intention of the local military authorities, and from a telegram I read a moment ago it is pretty clear that was Sir Redvers Buller's own intention.

21262. There is a telegram, No. 67, which rather bears out that view, from Sir Redvers Buller to the Secretary of State, dated December 18th:—"As to your telegram No. 56, the directions which it contained had already been given, but after receiving your No. 53 I ordered the 5th Division (less two battalions urgently required at De Aar Junction) to Natal"; so that he seems to have had the whole division in his hands at that time?—Yes. My case is that from first to last he was master of the Fifth Division, and could employ it where he considered it most advantageous to employ it, and if, as seems to be the case, that is the only instance in which interference from home is alleged, the charge breaks down altogether.

21263. Is that all that is necessary to be said on that subject?—Yes.

21264. Do you wish to say anything about the circumstances under which Sir William Butler resigned?—I do not know that I think it particularly material that I should. I presume you have had evidence, but if the Commission desire to hear my explanation I can give it in the fewest possible words. I shall once more, if I may, quote a document. In that document I referred to the unfortunate relations which have lately existed between Sir Alfred Milner, High Commissioner of South Africa, and Sir William Butler, General Officer in Command there. I stated that I had now received from Sir William Butler an official letter explaining his conduct, and ending as follows:—"As the result of an interview which I had with Sir Alfred Milner to-day, has left little doubt on my mind that my presence in command here has been an increasing source of embarrassment to him, or of hindrance to the prosecution of his views, I have, in consequence, lost no time in adopting the only course which appears possible under the circumstances. I am prepared to place in your hands the resignation of my present appointment to be dealt with as you may think fit." I expressed the opinion that it would be desirable to accept this resignation. I said that I did not doubt Sir William Butler's sincerity, nor dispute his right to hold his own opinions with regard to questions of South African policy, but it appeared to me that at such a crisis it was absolutely necessary that the High Commissioner and the General Officer in Command should be on terms of mutual confidence and that their relations should be known to be of a cordial

character. This, unfortunately, could not be said of Sir Alfred Milner and Sir William Butler. It was notorious that they disagreed, and, in my opinion, the ill-assorted union should be terminated as soon as possible. In these circumstances, the Commander-in-Chief had proposed, with my approval, that Sir William Butler should be appointed to the command at Plymouth, then held by General Sir F. Forestier-Walker, and that Sir F. Forestier-Walker should be appointed General in Command in South Africa. That really contains the whole story.

21265. Some questions have been asked as to the occupation of Ladysmith?—The history of the occupation of Ladysmith is briefly this:—On the 22nd April, 1897, we decided to add a battalion of foot and three batteries of field artillery to the garrison of Natal. Upon this the General Officer commanding in South Africa—General Goodenough then—telegraphed as follows:—"Recommend locating 1st Battalion Royal Irish Rifles, three Batteries of Artillery and 2nd Battalion Royal Dublin Fusiliers at Ladysmith under canvas. Preferable to Maritzburg which is crowded already. Will you sanction occupying the new station? High Commissioner concurs." That telegram was referred to the then Adjutant-General, Sir Redvers Buller, and the then Quartermaster-General Sir Evelyn Wood, who concurred in the proposal, and on the next day a telegram was sent to the General Officer commanding in South Africa in these words "Ladysmith approved as new station." I feel no doubt that Ladysmith was chosen as a new station simply because it was supposed to be a fairly healthy place and because the other places were crowded and there was no accommodation, but it is my belief that at that time the question of regarding Ladysmith as a *place d'armes* was not at all taken into consideration; at any rate it was not so represented to me.

21266. Were you not aware of the local schemes of defence which were drawn up by the officers in South Africa?—To some extent, but they were very technical military matters, which interested me, but I could express no opinion as to their merits.

21267. I think all of them provided for Ladysmith being a station for a certain part of the garrison of Natal?—A station; but I think in most of those schemes it was contemplated that the troops should be placed in advanced positions ahead of Ladysmith. Lord Wolseley, for example, contemplated, as you know, holding the northern triangle of Natal. Ladysmith might then have remained simply as a station behind those advanced positions.

21268. I think my impression from the evidence is that Ladysmith was the main position; there were posts in advance, Dundee and so on, but Ladysmith, in the schemes, was designated for practically the garrison that was there before the outbreak of the war?—It was designated as the station at which that garrison should be quartered; but my point was that I doubted whether it had been regarded from the point of view of its suitability as a defensive position.

21269. Was it not also designated as a place where stores were to be accumulated?—Certainly; the stores were, in fact, as you know, accumulated there.

21270. On the ground that it was a great railway junction. Was that one of the grounds on which it was occupied?—I think so.

21271. The account you have given us is your understanding of the way in which the matter came about?—Quite so.

21272. It came from an officer in Natal, and was approved in the War Office by your military advisers?—Yes.

21273. You did not mention the Commander-in-Chief; did he concur?—It went to the Adjutant-General and the Quartermaster-General; I do not know whether it went to the Commander-in-Chief at the time or not.

21274. But it was occupied then with your approval?—Whether the matter ever came before me I do not know, but if it had come before me with the imprimatur of the Quartermaster-General and the Adjutant-General I should have accepted it as a matter of course, and I should not have considered it my business to find out whether the place was or was not suited for defensive purposes.

21275. You did not hear whether it was the intention of those who advised you that in the event of the invasion of Natal there should be a withdrawal from

26 Mar. 1903.

Ladysmith behind the Tugela?—I never heard that idea mentioned until late in the day, by which time I conceive that we were so deeply committed to Ladysmith that a withdrawal would have been almost impossible. I know the Commander-in-Chief did consider that matter, and would have been much happier if we could have withdrawn behind the Tugela, but the immense accumulation of stores at Ladysmith I imagine rendered that out of the question.

21276. I have before me an answer given by Sir John Ardagh. He was asked: "But there was a large collection of stores, and as it turned out it was necessary to defend it in order to preserve the stores," and the answer was: "Our idea at home was that the stores would be withdrawn to a defensible position, which from our point of view would naturally have been the line of the Tugela. (Q) That was your distinct idea at home? (A) Yes."?—Did you ask Sir John Ardagh when that idea was formed?

21277. He was speaking of the time at which Ladysmith assumed the position it afterwards occupied in the schemes, to which he answered: "After the Jameson Raid it began to be more looked into, and it gradually developed into a fairly large cantonment"?—I cannot help thinking that if there had been anywhere on record a military proposal to the effect that whenever hostilities became imminent the stores should be withdrawn from Ladysmith, there would have been some trace of it, and we should have heard of it.

See Q 5066.

21278. He was asked, "Was that formulated in any way?" and the answer was, "I have no doubt it will be found in the various minor reports about defensive positions, and the places to be occupied in the event of operations coming down towards Ladysmith"?—I am afraid I cannot answer for what may be found in the minor reports.

21279. Is that all you wish to say about Ladysmith?—Yes.

21280. We had some evidence from Sir Henry Brackenbury with regard to a Report on Deficiencies in Reserves in 1899?—The war undoubtedly brought to light a very serious deficiency in our reserves of stores, and I put in a Memorandum which I prepared on the subject at the time.

MEMORANDUM OF MAY 21ST, 1900, BY THE MARQUESS OF LANSDOWNE WITH REGARD TO RESERVES OF ARMAMENT AND MILITARY STORES.

Being dissatisfied with the condition of the Ordnance Department, I appointed as Director-General, in the beginning of 1899, Sir Henry Brackenbury, of whose administrative capacity I had had opportunities of judging while he was my colleague in India. Sir Henry addressed himself at once to the task of inquiring into the condition of our armaments and reserves of guns, ammunition, stores and clothing. Before he had completed his investigation the war broke out, and brought to light the melancholy extent of our deficiencies.

In December 1899 he made his Report, and laid before me proposals for remedying a condition of things which he correctly described as full of peril to the Empire.

* The Report placed upon record the following facts:—

We had a quite insufficient reserve of Horse and Field Artillery *matériel*; only one battery of Horse Artillery, and that converted to an experimental quick-firing system; and only eleven batteries of Field Artillery, of which two had been converted to an experimental system. Five of these were soon after sent to South Africa, and three were required for newly-raised batteries, leaving at one time only one reserve battery in the country.

The whole of our stock of field gun ammunition (500 rounds per gun) was absorbed by demands from South Africa at a very early stage in the war, and we had to borrow from India and from the navy to keep up the supply demanded.

We had only 500 sets of harness and 500 sets of cavalry saddlery in reserve, and had to send more than that number of each to South Africa to make good losses in the first two months of the war. We had only 500 sets of Mounted Infantry saddlery in reserve, and had at once to order 11,500 sets to equip the force for South Africa, being forced to have recourse to the American market to obtain them.

We sent to South Africa in the first two months of the war a third of our store of small-arm ammunition, and dispatched weekly 500,000 more rounds than the

whole manufacturing power of the country could produce.

We at once exhausted our reserve of infantry accoutrements, we had to borrow large guns from the navy, machine guns from fortresses, boots and helmets from India, to buy 25,000 sets of mule harness, 17,000 tents, and 900 marquees.

We had no reserve of hospital equipment; we had but one-fiftieth of the picketing gear required in South Africa, and a reserve of only eighty swords.

The greater part of the armament of our fortresses being obsolete, its replacement by more modern guns had been approved. At the beginning of the war there was a small and quite inadequate reserve of spare B.L. guns; there were no spare Q.F. guns. The ammunition stored only amounted to 200 rounds a-gun abroad and 100 rounds a-gun at home. The reserve was insignificant.

There was an urgent need of further storage accommodation; the Ordnance Store buildings could barely hold the inadequate stocks in existence at the time, and there was no sufficient reserve of power of output of military stores in the country.

The whole of the firms manufacturing war *matériel* in the country have, indeed, been, during the war, employed to the fullest capacity, and the Ordnance Factories have worked night and day and on Sundays. All naval orders in the Laboratory and Carriage Department had, for a time, to be put aside.

It is, I think, abundantly clear, from Sir H. Brackenbury's Report, that we were not sufficiently prepared even for the equipment of the comparatively small force which we had always contemplated might be employed beyond the limits of this country in the initial stages of a campaign. For the much larger force which we have actually found it necessary to employ our resources were absolutely and miserably inadequate. The result has been that the Department, even by working under conditions which have nearly led to a breakdown, has been barely able to keep pace with the requirements of the army. We had at the outset of the campaign to send troops abroad, insufficiently supplied with clothes and equipment, and if we have been able to overtake arrears, it has only been by relaxing our specifications, and by paying extravagant rates. If other complications had supervened, a catastrophe would have been inevitable.

The condition of things disclosed by Sir H. Brackenbury's Report was so grave that I at once referred it to the Defence Committee of the Cabinet, by which it was considered at meetings held during the month of January. The Chancellor of the Exchequer urged, and I thought most reasonably, that we ought not to accept proposals involving an expenditure of many millions upon the representation of a single official of the War Office. We accordingly decided to appoint a Departmental Committee, consisting of Sir Francis Mowatt, Mr. George Wyndham, and Mr. E. Grant Burls, of the India Office, to examine Sir Henry Brackenbury's proposals, while a second Committee, consisting of Sir Robert Grant, lately Inspector-General of Fortifications; Admiral Custance, Director of Naval Intelligence; and Colonel Walford, of the Royal Artillery, was appointed to examine specially two of the questions which had been raised, viz:—

1. The percentage of guns and mountings which should be held as reserves for the approved fortress armaments; and

2. The armament of the defences of the land fronts of fortresses at home and abroad, for which no provision has been made in the re-armament scheme accepted in 1899.

Sir Francis Mowatt's Committee reported on the 31st March, and Sir Robert Grant's Committee on the 26th February.

The following is a summary of the expenditure recommended by the first-named Committee:—

	£	£
(A.)—Reserves of guns and mountings for coast batteries (on a basis of 1 gun in reserve for every 10 mounted)	499,980	
Ammunition for ditto	1,289,876	
		1,789,856
(C.)—Reserves of guns, &c., for Horse and Field Artillery (on a basis of 25 per cent. reserve) and completion of siege train	1,475,351	

* Note.—It was arranged when Lord Lansdowne gave evidence that his memorandum should be printed, and that the Commission should subsequently decide to what extent it should be finally left for publication.—B. H. H.

(D.)—Reserve of machine guns and carriages (on a basis of 25 per cent. reserve) ...	£	£
(E.)—Reserves of general stores, including a sufficient stock to maintain a force of three army corps, one cavalry division, and lines of communication (about 135,000 men) in the field for six months, besides special reserves of particular stores ...	76,260	
(F.)—Reserves of clothing calculated upon the assumption that we should have—		
1. A sufficient quantity to supply to the whole of the force above specified the equipment (fighting dress) which it would require on mobilization.		
2. A moderate reserve to be sent out with the field force.		
3. A working margin equal to six months' requirements	932,000	
(G.)—Increase to plant and buildings of ordnance factories ...	366,100	
(H.)—Additional storage accommodation ...	500,000	
		4,692,711
Total ...		6,482,567

The recommendation (A) above is calculated on the basis of a 10 per cent. reserve; this percentage was given to the Committee as a provisional basis of calculation, while its sufficiency was referred to Sir R. Grant's Committee for consideration.

Sir R. Grant's Committee recommended—

- | | | |
|--|---|-----------|
| 1. The adoption of a basis of one gun in reserve for every four mounted abroad, and of one gun in reserve for every six mounted at home. The substitution of this percentage for that which forms the basis of (A) in the recommendations of Sir F. Mowatt's Committee involves an additional expenditure of ... | £ | 1,124,134 |
| 2. The provision of movable armaments for land fronts of fortresses, at a cost of ... | | 1,586,338 |

In addition to the above, a sum of £3,552,965 will have to be spent during the next three and a-half years on the completion of the coast defences, in accordance with the scheme approved by the Cabinet in 1899. It was at first intended that guns and works were to be provided (the former out of Estimates) during the seven years following the approval of the programme. It was decided by the Defence Committee of the Cabinet in January that both are to be provided as rapidly as possible. This expenditure has been agreed to by the Treasury.

There has been a considerable amount of official and unofficial discussion between the Treasury and the War Office with regard to the above proposals. At present the situation is as follows:—

The Treasury insists upon the following terms—

(E.)—The demand for £1,343,000 for reserves of general stores is not to be pressed, but £500,000 is to be placed at the disposal of the War Office.

(F.)—In regard to clothing, the Treasury refuses altogether to sanction the demand for a six months' working margin of stock, and will agree to the remainder of the proposal only when the War Office is able to show that an improved system of clothing has been actually adopted for the army.

In regard to the recommendations of the Grant Committee—

1. The proposal to provide reserves of guns and mountings for coast batteries on the higher scale recommended, involving an expenditure of £1,124,134, is altogether refused.

2. The Treasury refuse to agree to the proposal that £1,586,338 should be spent upon the movable armaments of the land fronts, but have expressed their readiness to consider favourably the provision of new armament for a few of the more important fortresses abroad.

If the War Office will accept the above terms the Treasury will, it is understood, accept the remainder of the proposals with a few reservations on minor points. If the War Office declines, the Treasury withdraws its concessions.

While I am anxious to meet the views of the Chancellor of the Exchequer, I must urge that his proposals, if adopted, would seriously hamper us in giving effect to what I understand to be the policy of the Cabinet—

As to stores, we have decided that our military preparations are to be based upon the assumption that we have three army corps and a cavalry division, with troops for lines of communication, at our disposal. Our equipment and reserves of guns and ammunition are to be provided upon this assumption, and it would, to my mind, be out of the question that our reserves of stores, which are as indispensable to an army in the field as any other part of its equipment, should not be provided upon the same basis.

In regard to the reserves of clothing, our demands are, in my belief, only reasonable. A Committee, to which the question of the clothing of the army has been referred, has lately reported, and has recommended a simpler and more practical system, based on the principle that there should be only two styles of dress in the British army, viz.:—

(a) Full dress.

(b) The fighting and working dress.

This principle has been accepted by the military heads of the War Office, and I have no objection to announce it in general terms. This ought, in my opinion, to be a sufficient guarantee to the Chancellor of the Exchequer. All that we propose is, that we should always have in stock the whole of the clothing indispensable as a first outfit for the approved field force; that we should also have a moderate reserve which would be sent out to the base of operations on the outbreak of hostilities, and that we should have, in addition to the above, a six months' working margin of stock in store at home. Without such a working margin we should, on the commencement of hostilities, be subjected to a repetition of the same pressure which has so nearly led to a breakdown during the present war.

As to the recommendation in favour of a more liberal scale of reserves of guns, I have only to say that it was decided by the Defence Committee to have recourse to expert advice, and that, in the judgment of Sir R. Grant and his colleague, a reserve of less than one gun to four abroad and one to six at home would not be consistent with safety.

With regard to the defences of the land fronts, the Grant Committee has recommended the provision of 610 guns of modern type, to replace 1,196 guns of various obsolete types.

The Committee was instructed to consider particularly the nature of the attack which was to be anticipated in the case of each fortress, and, in all cases where schemes of defence already approved had been based upon the assumption that the fortress was exposed to attack of a particular nature, was to base its recommendations upon the same assumptions. The armament proposed by the Committee is considerably below that proposed by the Director-General of Ordnance.

It has been suggested that as we have retained some guns of old types for sea defences, so we should retain for the defence of the land fronts a certain number of old-fashioned guns. The answer to this is that, when we are concerned with the land fronts, it is not a question of defending narrow channels, but of placing in the field movable guns whose effective range should be at least equal to that of any guns which are likely to be opposed to them. The proposal of the Treasury would oblige us to leave the whole of the land fronts of our home fortresses undefended except by guns of an obsolete pattern, while abroad such places as the Cape, Hong Kong, and Mauritius would have nothing but their present inadequate armament. We shall, I think, incur a very serious responsibility if we neglect what seems to me to be an ordinary measure of precaution in regard to fortresses and coaling stations of such importance.

With regard to the question of reserves generally, I urge strongly that we decide once and for all to place the Ordnance Department upon a business footing. No large purveyor of commodities could carry on without a stock sufficient to meet promptly the urgent demands of his customers. We have attempted to conduct a huge business literally from hand to mouth. We ought to decide now to create reserves sufficiently large to enable us to meet the initial pressure of a campaign, and the War Office should be authorized to replenish those reserves without special instructions whenever they have been encroached

upon.* This is the Indian system, and it works well. A similar system, I believe, prevails in the navy. Unless we do the same here, we shall one of these days have a disastrous breakdown. It is no exaggeration to say that if we had this year been involved in hostilities by sea as well as by land such a breakdown would have occurred. As it is, the Admiralty has complained bitterly that we had to neglect its requirements because we could not afford to neglect those of the South African Army.

I am not asking to be given the whole of these large sums at once, but I do ask for the acceptance of the policy, for authority to issue the necessary orders, and for an assurance that the necessary sums will be forthcoming when the material is ready, which we hope will be within the next three years.

A mere payment on account without the acceptance of the policy will leave us still on the old hand-to-mouth basis.

(Initialled) L

May 21, 1900.

It will, of course, be remembered that in our former military schemes we never contemplated anything beyond sending two Army Corps out of the country, and obviously the military operations, on the scale to which they developed almost at the outset of the campaign, were bound to eviscerate our reserves, such as they were; but, irrespective of that, I do not think the question of reserves had been sufficiently considered as distinct from equipment. You want to have with each of your units a certain equipment, and you ought also to have behind that a certain reserve with which to make good the wear and tear of that equipment. The point was taken up by Sir Henry Brackenbury, whose evidence you have received. Sir Henry Brackenbury entered the War Office in February, 1899. I formed a very high opinion indeed of his ability during his service as a Military Member of the Council in India, and I was particularly anxious that he should come into the War Office, and take charge of the Ordnance Department. He did so, and addressed himself to this question of reserves, but during the first months of his tenure of office both his time and mine were very fully taken up; we had at the moment a large scheme in progress for the rearmament of our fortresses. It had been impressed upon me during the previous year and before that that a great part of the armament of those fortresses was of a most obsolete character, and that a very large outlay was necessary in order to replace these old-fashioned guns by modern guns of the best type, that was, of course, a scheme which could not be carried out without passing in review the armament of all these different fortresses, and considering whether it was or was not excessive, whether it was suited to the present requirements. I mention that to show that, irrespective of the immense pressure on the Ordnance Department, which was due to the war during the earlier part of 1899, Sir Henry Brackenbury's hands were very full with this armament scheme, and he was therefore not able to advise me with regard to the question of reserves until the end of the year 1899, when he laid certain conclusions before me which showed that we had a very serious void to fill up. That matter was at once taken up by Government, it was considered by the Defence Committee, and it was considered by the Cabinet. The Commissioners are aware of the manner in which General Brackenbury's proposals were dealt with by the Mowatt Committee and Sir Robert Grant's Committee, the result of those two inquiries being that an expenditure of about 10½ millions out of 11½ millions recommended by Sir Henry Brackenbury was authorised.

21281. I think that it is not the case that this deficiency in stores was only brought to light by the war: you were dissatisfied with the matter before the appointment of Sir Henry Brackenbury?—I was convinced that the whole question of the Ordnance Department wanted a thorough overhauling and I brought in General Brackenbury, with the Commander-in-Chief's entire concurrence, as the man above all others who was best fitted to set matters in order.

21282. And do you think that deficiency of stores had been of long standing?—I think so. I think we were probably—as I believe Lord Wolseley said in a memorandum I quoted—better found at the beginning of the late war than we had ever been found before, but that does not prove we had enough.

21283. Is not that a fact that ought to have been brought before the Secretary of State of the day?—All these things mean an enormous expenditure of money, and if the Commission will consider the large expenditure that was incurred during the five years I was at the War Office I think they will understand that we could not do everything at once.

21284. I mean, without any reflection on individuals, the system ought to have provided, and ought to provide in future, that a deficiency in stores to the serious extent that was brought out by Sir Henry Brackenbury's inquiry should not occur?—I do not disagree.

21285. The system had not provided against that contingency as it stood in 1899?—I am not sure that I should admit that it was the system that was at fault.

21286. What was, then?—The personal element enters into all those things; you may have a head of a department who is easy-going and does not like putting forward proposals for the expenditure of millions when he knows there are other demands for the expenditure of other millions in front of him.

21287. But, in order that we may have the Army well found, we ought to have a system which, as far as possible, will eliminate the personal element.

(Sir John Jackson.) Who preceded Sir Henry Brackenbury?—General Markham. In regard to the question of our shortcomings in the matter of fortress armament, there was no fault, either personally or in the system; that was brought before us, and we were aware of it before General Brackenbury came to the Office. What happened when he arrived at the Office is that we accelerated the arrangements for making good the deficiency.

21288. (Chairman.) And the Commander-in-Chief agreed in the proposal that came from Sir Henry Brackenbury's enquiry?—He was certainly aware of it and concurred in it. The matter was one which concerned the Director-General of Ordnance more immediately than it concerned the Commander-in-Chief, but I see that after the Report of the Mowatt Committee I authorized a draft letter to the Treasury recommending certain proposals for adoption, and that I minuted that paper "to be seen by the Commander-in-Chief," and it was marked by one of the Commander-in-Chief's staff on the 28th of April as "seen by the Commander-in-Chief." I also find in the Records of the Army Board that on the 18th June the Director-General of Ordnance made a statement on this subject to the Army Board, the Commander-in-Chief being present, and the Board noted with satisfaction the large expenditure which had been authorised by His Majesty's Government, so that I think you may say that the Commander-in-Chief was sufficiently consulted.

* To use the words of Sir F. Mowatt's Report, the necessary reserves should be "permanently maintained and any stores withdrawn for service immediately and automatically replaced."

FIFTY-THIRD DAY.

Friday, 27th March 1903.

PRESENT :

The Right Hon. The Earl of ELGIN AND KINCARDINE, K.G., G.C.S.I., G.C.I.E. (*Chairman*).

The Right Hon. The Viscount ESHER, K.C.B., K.C.V.O.
 The Right Hon. The Lord STRATHCONA AND MOUNT
 ROYAL, G.C.M.G.
 The Right Hon. Sir GEORGE DASHWOOD TAUBMAN-
 GOLDIE, K.C.M.G.

The Hon. Sir FREDERICK MATTHEW DARLEY, G.C.M.G.
 Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.
 Sir JOHN EDGE.
 Sir JOHN JACKSON.

BERNARD H. HOLLAND, Esq., *Secretary*.

27 Mar. 1903.

21289. (*Chairman*.) I believe you would like before we proceed to supplement a little what you said about the Intelligence Division Papers, and in that connection may I draw your attention to a correspondence with which we have been furnished between the Colonial Office and War Office in 1897, in which Mr. Chamberlain acknowledges having seen those papers which had been communicated to him by the Intelligence Division, and the War Office on the 29th April went into detail in the matter?—I am very glad you give me the opportunity of adding something to what I said yesterday upon the subject of those papers. I believe that the first statement I made was that the little buff book entitled "Notes on the Two Republics" had come into my hands, I thought, in 1899, and in consequence of a request I had made to be supplied with it, but I am anxious to avoid leaving the Commission under the impression that the documents upon which that collection of notes was founded were unknown to me until 1899. When they first became known to me—because, as you remember, they are documents of different dates—I cannot tax my memory to say, but I think it quite possible, considering my intimate relations with Sir John Ardagh, of which I spoke yesterday, that soon after they were written they were informally made known to me; some, at any rate, of them may have been. What I wished to convey to the Commission was this, that those documents were never put before me by the Commander-in-Chief as a justification of a demand for important measures designed to strengthen our position in South Africa. That was the object of my statement, and, indeed, as far as my memory serves me I cannot recollect any formal demand for precautionary measures of such a kind between Lord Wolseley's proposals, which were embodied in his minute of 1896, and his big demand which was put in the minute of June, 1899. I do not think there was anything between the two. With regard to the earlier of those demands, the Commission will notice that what Lord Wolseley then asked for was that the force in South Africa should be increased by one regiment of cavalry, one battery of artillery, and two battalions of infantry. Now, as a matter of fact, between 1896 and 1899 the garrison of South Africa was increased by one regiment of cavalry, as proposed by Lord Wolseley, by three batteries of artillery, instead of one battery of artillery, as proposed by Lord Wolseley, and by four battalions of Infantry, instead of two battalions of infantry, as proposed by Lord Wolseley. I cannot give the Commission the precise date of those additions, but I think I may say that they must have taken place in 1897 and 1898, and they, therefore, show that, as you suggested just now in your question, the condition of affairs in South Africa was present to the mind of Her Majesty's Government.

(*Sir George Taubman-Goldie*.) It might be as well to have on the notes the exact figures which I have got here. On the 1st December, 1896, there were 5,409 men in South Africa; on the 1st June, 1897, there were 8,154; on the 1st December, 1897, there were 9,593; on the 1st June, 1898, there were 9,036; on the 1st December, 1898, there were 8,456; on the 1st June, 1899, there were 10,289; and on the 1st October there were 22,104.

21290. (*Chairman*.) About this correspondence with

the Colonial Office, have you that at all in your recollection?—Not the details of it; but I do remember there was a correspondence, and that there were discussions in the Cabinet.

21291. The correspondence to which I allude proceeded on the fact that the Secretary of State for the Colonies had seen the papers in the Intelligence Division, which therefore must have been those first on the series, those of 1896, because this is in 1897, and on April 14, 1897, Mr. Graham, the Under Secretary, wrote that he was directed by Mr. Secretary Chamberlain to request that he would draw the particular attention of the Marquess of Lansdowne to reports furnished to this department from time to time by the Director of Military Intelligence, and especially to the letters from Major Altham and Major Northcote, of the 8th and 16th March; and your reply on the 29th April is in detail here, but it goes on this preface that "Lord Lansdowne takes note of Mr. Chamberlain's statement that in view of the enormous and continued military preparations of the Transvaal Government he cannot conceal from himself the possibility that the latter, feeling themselves in a position of strength, and knowing that the British possessions in South Africa are comparatively defenceless against an attack from that side, may allow themselves to be carried away by the more reckless of their advisers, and take some step which Her Majesty's Government could not overlook, or even go so far as to initiate aggressive action." Did not that point at larger preparations being made than those which you have mentioned just now?—I should have thought that passage pointed rather to raids perhaps on a considerable scale, than to an invasion in force; but, at any rate, the outcome of those discussions was the gradual increase of the garrison to which reference has just been made.

21292. I see that at the end of Sir Ralph Knox's letter the opinion of the War Department was summed up in this way, "that it is accordingly intended to send at once to South Africa three batteries of field artillery, and an additional battalion of infantry will also be sent," and the cost was stated at £200,000?—That is one of the increases of which I spoke just now.

21293. Do you think that that increase met the representation of the Secretary of State for the Colonies at that time?—We thought so at the time.

21294-5. The Secretary of State for the Colonies accepted that, and did not ask for any more?—I do not think so. In the same letter you discussed the force which was at first applied for by the Secretary of State for the Colonies, which would have consisted of three regiments of cavalry and two batteries of artillery, and the estimated cost would have been £500,000; your letter argued for a reduction to the amounts I have previously stated.

21296. (*Sir George Taubman-Goldie*.) After consultation with your colleagues?—Yes, the thing came before the Cabinet, and was discussed with that result.

21297. (*Chairman*.) With the outcome that it was reduced from what had been proposed by the Secretary of State for the Colonies to the amounts which were actually sent?—Yes

The Right
Hon. the
Marquis of
Lansdowne,

G.C.S.I.,
G.C.M.G.,
G.C.I.E.

27 Mar. 1903

21298. (*Viscount Esher.*) On what do you suppose the Secretary of State for the Colonies based that demand which the Chairman has just read out for a specific number of troops?—It is very hard for me to say, but the question, as I said just now, came before the Cabinet, and the decision of the Cabinet for which the whole Cabinet is responsible, was that the smaller force should be sent.

21299. (*Chairman.*) Looking back on the correspondence, I think, from the previous letter, on the 5th April, it quite clear that Mr. Chamberlain's observations were based on the Intelligence Division's papers, and on the perusal of General Goodenough's despatch of the 13th December, 1896?—No doubt.

21300. You do not want to say anything more on that subject?—Not on that subject, but may I add one word on another matter which was mentioned yesterday? I was asked, I think, by yourself, Lord Elgin, why it was that as the five years franchise proposal was withdrawn by the Transvaal Government on the 5th September, when the Cabinet met on the 8th September, we only sent out a reinforcement of 10,000 men, and why we did not at once put in hand the preparations for the despatch of a larger force. I have looked at my papers since I was in this room, and although I have not got the Blue Books of the time by me, I think it is clear that the reason the larger measure was deferred was because the withdrawal of the five years franchise proposal did not terminate the negotiations. A despatch was written in reply to that withdrawal; there was a question even then whether there should not be a conference, and, as a matter of fact, the negotiations did continue for some days afterwards, and it was only when the negotiations had clearly fallen through that we decided to spend a very large sum of money—I think something in the neighbourhood of £600,000—in preparations for the larger force. You will see that on the 16th September the reply of the South African Republic Government was handed in to the British Agent at Pretoria, stating willingness to enter upon a conference provided acceptance is not made dependent upon impossible conditions. I think the date of the actual breaking-off was September the 22nd, when Mr. Chamberlain sent a telegram to Sir Alfred Milner noting the negative reply of the South African Republic Government, and stating that a further communication would be made.

21301. (*Sir George Taubman-Goldie.*) I think there was a despatch sent on the 8th September, the last paragraph of which is very clearly in my mind, by which the Government withdrew all their previous offers and said they were prepared to formulate their own policy?—That is quite right; on the 8th September a reply was sent intimating that Her Majesty's Government adhered to their previous decision, and that if the South African Republic Government's reply is negative or inconclusive they must preserve the right to reconsider the position *de novo* and to formulate their own proposals for a final settlement. I think that must be the paper you have in your mind.

21302. That is why I asked the question yesterday, because reserving the right to reconsider the position *de novo* and to formulate your own policy does imply the breaking off of the former negotiations?—It was a plain intimation that they had arrived at the end of their tether, but there was a *locus penitentiae* left.

21303. I quite understand that; still, it was an intimation that they had arrived at the end of their tether?—As I think I said yesterday, the reason—at any rate, one of the reasons—for which we limited ourselves to sending out a reinforcement of 10,000 men was because we believed that that reinforcement was sufficient to secure the safety of the Colonies.

21304. (*Chairman.*) And, further than that, that the political considerations still were in favour of your not doing anything to make an absolute break with the two Republics?—And absolutely shipwreck the last hope of a settlement being arrived at.

21305. We had got yesterday to the point at which you wished to mention the minutes which the Commander-in-Chief has put in, showing that he on several occasions proposed increases in the Army, and that those increases were not complied with?—I do not know to what extent the Commission would like me to go into these matters; if they are to be gone into minutely I am afraid it will be rather a long story, and I am disposed to put it to the Commission rather upon broad and general lines. The first of that series of minutes of Lord Wolseley is one dated 22nd February, 1896, con-

taining, as the Commission knows, very large demands indeed involving an immense expense. Now Lord Wolseley and I had taken office a few months before, and we had not very much time for taking stock of what we found at the War Office. At the date when Lord Wolseley's minute was put in the Estimates for the year had already been framed, and I think it must be quite evident that proposals so extensive as those of the Commander-in-Chief could not possibly be accepted without careful scrutiny and examination, not only by the Departments, particularly the Financial Department of the War Office, but by the Government as a whole. I am anxious, however, that the Commission should understand that, far from brushing Lord Wolseley's proposals summarily on one side, they were treated with the utmost attention, and I have here two or three minutes of my own dealing very fully with Lord Wolseley's proposals, and I should like to put those in. I have not put them in yet.

21306. Are they not those we have already?—No; I can give you, in a very few words, the essence of them, and then I think it will be for the Commission to consider whether they might not be printed in connection with Lord Wolseley's minutes. I see, for example, that in my first minute dated 10th July, 1896, I pointed out that the initial expenditure involved by the Commander-in-Chief's proposal amounted to two millions sterling; that in addition there would be a normal increase of the Estimates of £900,000 a year, an increase which in course of time would rise to £1,175,000 a year; and I said I could not lay before the Cabinet so vast a scheme until the necessity for the whole of the proposed expenditure had been demonstrated. Then I went on to pass the different proposals—which, of course, in the meanwhile had been examined in the Finance Department of the War Office and in the different Departments concerned—in review, and at the end of the minute, paragraph 20, I summarised the points upon which I asked for further explanation. If I may go back for one moment to Lord Wolseley's own minute, I should like to point out that he had apparently admitted that he had not taken into consideration the financial aspects of these questions, because he says that "while he trusts it will not be supposed he is blind to the desirability of the most rigid economy, the main lines upon which our Army should be constituted must be framed on other considerations than those of finance." Of course, we, who have to watch over the expenditure, have perhaps to give more consideration to the financial aspects of these matters than our military advisers. However, Lord Wolseley went on in paragraph 31 to say, "I am aware that it may not be in the power of the Government to give, at all events, at once the whole of what I press for," but he asks that his proposals should be accepted as the basis and essence of our military administration. I think that shows Lord Wolseley himself realised that his scheme was a basis for discussion, and that he himself did not expect that the whole of what he asked for was likely to be granted in the immediate future. After that Lord Wolseley's proposals were examined by the Colonial Defence Committee with regard to that part of them which had reference to the garrisons abroad and also by the Army Board, and it is rather a remarkable fact that the Army Board, of which the Commander-in-Chief is a member, put forward recommendations which advocated the addition of only one battery of field artillery as compared with the 11 batteries.

21307. What was the date of that decision of the Army Board?—I cannot give the exact date, but it must have been in the last months of 1896, for I have here a minute, dated the 4th December, referring to the point, and with your permission I will put that minute in.

21308. That is quite near enough; I asked because I am not quite clear what was called the Army Board at that time?—The Army Board at that time consisted of the heads of the great military Departments, presided over by the Commander-in-Chief; it was then purely military.

21309. Much the same as the Army Board we knew of during the war?—No, I am coming to that later. Then the Army Board at the same time made various other comparatively modest proposals—the addition of 3,500 men to the Garrison Artillery, the addition of two battalions of Guards and seven battalions of infantry of the line, an additional battalion of the West India Regiment, and an additional battalion of Malta Militia.

21310. Are you quoting from a paper which you are putting in?—Yes. On the strength of those proposals I asked the Cabinet to give me two battalions

See Q. 21223,
et seq.

of Guards, an additional battalion of Cameron Highlanders, a battalion of the West India Regiment, a battalion of Malta Militia, and an addition of 3,500 men to the Garrison Artillery, and I believe that the greater part of that was given—I cannot say exactly how much. Lord Wolseley renewed his demands in 1897, and that minute I think the Commission has got; it is dated the 3rd November, 1897.

21311. (*Viscount Esher.*) That is a year afterwards?—Yes, and I find that on the 2nd December, 1897—we had, of course, in the meanwhile gone a great deal more carefully into all these points—I wrote a minute for the Cabinet supporting not the whole proposals made by Lord Wolseley in that minute, but the greater part of them, and in particular—

21312. (*Chairman.*) May I interrupt you for one moment? We have a minute here said to be signed by you of date 12th November, 1897. Is that the same minute? It deals with the Commander-in-Chief's minute of 3rd November?—I have not got that minute here, but it is quite obvious that I desired to raise a number of points and to elicit the Commander-in-Chief's opinion upon them, and that it was the result of that discussion between myself and the Commander-in-Chief that led to the minute to which I am now referring.

21313. I thought it might be the same, but only with a different date?—It is not the same; it was an interlocutory proceeding. I was going to say that I was at that time in entire agreement with the Commander-in-Chief upon the main principle which underlay all his proposals for increases to the infantry of the Army, because the Commander-in-Chief and I were both strong advocates of the system of linked battalions, which, as you know, proceeds upon the assumption that for every battalion abroad, or for every battalion abroad approximately, there should be a battalion at home, and I felt, as did Lord Wolseley, that the reason our system was being overstrained was because we had been continually increasing the strength of our garrisons abroad without a corresponding increase of the strength of the forces at home upon which that garrison depended. Although Lord Wolseley and I may not have been absolutely in line as to the number of battalions required for that purpose, upon the main principle we were absolutely in line, and I supported him to the best of my ability. In that minute of the 2nd December I asked for 10 battalions of the line, for an addition of 50 men per battalion in order to make the home battalions better able to find the drafts requisite for the battalions abroad, for an addition of 12 batteries of artillery, and also for a sum of three-quarters of a million for the abolition of what was known as the grocery stoppage, a stoppage which had the effect of diminishing the soldier's pay, which was extremely unpopular, and supposed to be very detrimental to recruiting.

21314. That was a minute to the Cabinet?—That was the minute of the 2nd December, 1897, to the Cabinet.

21315. Which you put in?—Which I put in.* There is another minute of the 15th December which I put in also; they are all historically of some interest, and they all show—and that is the point I want to bring out—how very thoroughly and in what a favourable spirit these proposals of Lord Wolseley's were dealt with by myself and by the Cabinet. The proposals underwent a certain amount of change, but I think I am right in saying that the eventual outcome of it was that the Cabinet granted 10 battalions, an addition of 80 men per battalion (we found that the 50 was scarcely enough for our purpose), and 15 batteries of artillery, to which were afterwards added, I think, three howitzer batteries.

21316. When was that?—My minute was written in December, 1897, and the addition was sanctioned for the next year's Estimates.

21317. (*Viscount Esher.*) You got 15 batteries instead of 12?—Yes; in fact, 18 batteries, counting three howitzer batteries, which were added.

21318. Did you get the £750,000?—£635,000 was the final figure; I do not know how it came to be reduced; that was a very large increase, and I do not think I misrepresent Lord Wolseley when I say that he received it with very great satisfaction. I make one slight correction; I mentioned 10 battalions of infantry; the Cabinet did not refuse the addition of 10 battalions in principle, but, as we all knew that new units can only be raised slowly and gradually, the Cabinet only sanctioned six battalions at the time on account of the larger proposal.

I see that the Army Estimates, which in 1896-97, which was my first year, stood at 18½ millions, rose the following year to £19,630,000, and in the year after that to over 20 millions.

21319. (*Chairman.*) You mention that as showing that you did what you could to meet the requirements put forward by Lord Wolseley?—Certainly.

21320. With regard to Lord Wolseley's minute of the 7th January, 1899, you will observe he says: "I must here repeat what I said in the minute of 3rd November, 1897, on the state of the Army, that it is not strong enough in infantry or field artillery to fulfil the objects for which it is intended"; that is after the additions to which you have spoken?—Yes, I am afraid you will always find that the soldiers will ask for more whatever they get, but at the time when that large increase was obtained I remember very distinctly that Lord Wolseley expressed himself extremely pleased and satisfied.

21321. (*Sir George Taubman-Goldie.*) May I ask you whether you think that if you had gone to Parliament with very much larger proposals they would have been entertained?—I think not; I think we had considerable difficulty as it was with what we did ask for, because there is always this obvious criticism to demands for large increases to the Army. You ask for large numbers of battalions, but how can you show that you are going to get them? We had considerable difficulty then in keeping the Army, such as it was, full, and to begin building up ten or fifteen battalions at once was obviously an unwise proceeding.

21322. (*Viscount Esher.*) Does not Lord Wolseley practically admit that in the few words which follow those which the chairman read to you?—Yes. He refers to the inadequacy of the pay, but we had increased the pay very considerably, and it was not unreasonable to ask that we should see what the effect of that increase was.

21323. (*Sir Frederick Darley.*) Is there not another difficulty, too, with a sudden augmentation, namely, how to house the men?—Certainly; the barrack question underlies all these matters, and I may say with reference to that that we had already on hand the serious question of the condition of the existing barracks, which was very unsatisfactory. We were already confronted with the prospect of a very large expenditure in order to adapt the old-fashioned barracks—some of which were obsolete and insanitary, and others of which were situate in the wrong parts of the country—to the modern requirements of the Army; so that the addition of a large number of further units would have greatly intensified that difficulty.

21324. (*Chairman.*) Is that all you wish to say about the minutes?—Yes.

21325. (*Sir George Taubman-Goldie.*) I just wish to refer to the proposals put forward by General Brackenbury in December, 1899, with regard to these stores and reserves of guns, and so forth; may we not take it for granted that the deficiencies were not the result of one or two, or three or four years of insufficient expenditure, but were practically the accumulations of a great number of years of want of expenditure on the matter?—I think you may fairly take that for granted; in fact, I would almost say that we might go rather further, and say that, great as our deficiencies were, the Army at that moment was probably better equipped than it had ever been before. Lord Wolseley himself made an admission of that kind in a minute which I read yesterday, in which he described how the Field Force for South Africa had been equipped and despatched from this country.

21326. It would not be putting it perhaps too high to say that it has been the system in this country at all times to keep our stores as low as possible, and to economise as far as possible in such matters?—Yes. I think the idea was that at a pinch you could always go to the trade and buy what you wanted, and that there would be time to do it. I daresay those who held that view had something to say for it, because we never contemplated sending a huge force out of this country at a moment's notice, and it has always seemed to me that the occasions on which it would be likely that we should have to do so would be very rare. On this occasion we were fighting a Power that had no fleet, but if we had been engaged with a Power having a fleet, or having allies that had a fleet, we could not have sent two or three Army

27 Mar. 1903.

corps out of the country in the first few weeks of hostilities, and there would have been time, consequently, to look about and collect the stores and equipment you required.

21327. I notice that Sir Henry Brackenbury's Memorandum was written during what is generally known as the "black week"; it was after Stormberg and Magersfontein; and, in fact, it was on the very day of Colenso; is it not possible that he may have been fortified and encouraged to make what he considered to be the necessary demands to an extent that he would not have been if it had been in peace time and supposing we had come to an amicable arrangement with the Boers in the previous summer?—No, I think not; I think General Brackenbury had been working at this question for some months, and I think you must take it that his conclusions had been deliberately arrived at.

21328. Then I will go a step further; do you think, supposing we had come to an amicable arrangement with the Boers in the previous summer, it would be likely that any proposal to spend suddenly ten or eleven millions of money—and when I say suddenly I mean within two or three years—would have been favourably accepted by this country?—I think it extremely doubtful.

21329. It is even quite possible that not only the Government, of which you are a member, but no Government would have had the courage to bring forward such a proposal; is not that so as a general principle?—I think so.

21330. As a matter of fact, of course, in what one must call the panic of the war, the money was voted at once?—It is a well known thing that once a war has broken out the floodgates of expenditure are opened.

21331. And when the war is over the cry sometimes arises to reduce expenditure and to cut down the Army to the smallest possible limits?—There is always that danger, but pray do not understand me to suggest that, even if it was the existence of the war which enabled us to put forward these large demands, I do not think the principle which underlay General Brackenbury's proposals a perfectly sound one. I think I said yesterday that we had not—so it seems to me—sufficiently realised the difference between the equipment which a field force has to take with it and the reserve from which you would make good the wear and tear, which we all know is enormous, of that equipment when once the force has taken the field.

21332. I quite understand that, and I hope you understand that my question was directed rather to your opinion as to the way in which such proposals would have been received by the nation in the time of profound peace?—I quite understand.

21333. Coming to another point I believe that during the early stages of the war one of your great anxieties must have been how to replace the wastage of war in men?—Yes.

21334. Under the system which prevailed before the war, that is, under the Stanhope Minute or Memorandum we only provided for two Army Corps going abroad and a cavalry division, and it was a great difficulty to provide a sufficient number of trained men in order to fill up the gaps created by the wastage of war?—It was under those circumstances that the system of short service and reserves, which, as you will remember, had been a good deal derided, stood us in such good stead. I think the whole of the reservists who were called up, with the exception of one and a fraction per cent., joined the colours, and I have heard nothing but praise of the men. We should have come totally and hopelessly to grief if we had not had that reserve to fall back upon, and, as the Commission of course understands, while the reservists fill up the battalions which shed their younger soldiers, those younger soldiers go to the dépôt and train on, and are ready after a few months to go out as drafts to make good that wear and tear of which you spoke a moment ago.

21335. Quite so, but the number of troops required in South Africa for the war was so much greater than could ever have been contemplated by anyone in the country that the result was that during the war large classes of men had to be drawn upon who had little training?—Clearly; the requirements of the war were altogether far in excess of anything which we or anyone else had ever contemplated.

21336. And a similar state of things might arise at

some future time?—I should be sorry to say that it might not.

21337. And it is impossible for this country to keep up during perhaps 50 years of peace a standing army sufficient to meet such a state of things; it would be beyond the national purse?—That raises very serious questions. I think the answer to that is that we should always endeavour to have as large a reserve as possible. After our satisfactory experience of the Reserve in this war I should personally be inclined to rely more and more upon it, and I have always thought that there was a good deal to be said for a view which is held by Lord Roberts, amongst others—a view upon which, by the way, we acted—that it was possible and desirable to shorten the period of colour service, and to increase proportionately the period of Reserve service. The output of Reservists under a three years' system of engagement, of course, is enormously larger than under a six years' period of service with the colours.

21338. But even an increased Reserve system could not give us a sufficient number of men to meet such an enormous strain as was put upon the country in the South African War, and as might be put on the country again in a war with one or two great Powers?—For the rest you must depend upon the manhood of the country, prepared in such manner as may be found most expedient.

21339. That is the point I was coming to, and I would ask you now to throw your mind back to the year 1870, or so, when people were discussing the question of an Education Bill of this country, and when it was asserted constantly in the newspapers that the nation would never submit to civil education being imposed compulsorily upon the population. That has been done. I do not ask you as a Minister of the Crown to say whether the nation would ever submit to military education being made equally compulsory, but I do ask you as a former Secretary of State for War whether it would not have been an enormous advantage to you as Secretary of State for War if on appealing to the manhood of the country you had been appealing to a manhood who in their boyhood had been trained to arms?—That seems to me an obvious proposition.

21340. Then the young men who would have come forward to volunteer in tens of thousands would have gone out with a knowledge of how to shoot, with some knowledge of drill, and some knowledge of discipline?—Quite so.

21341. (Sir John Hopkins.) I should like to ask you a question about the calling out of the Army Corps. We had it in evidence, I think from Lord Wolseley, that if you want 10,000 men, say for a foreign expedition, you have the power of calling out a portion of an Army Corps; is that so?—Not strictly speaking a portion of an Army Corps, but a certain number of men. That is a very important point, and it is one to which I gave a certain amount of attention when I was Secretary of State. I was strongly of opinion that the blot in our system was that we could only touch our Reservists when we were able to proclaim—I think the words are—a great national emergency, or something of that kind. Obviously, you do not want to proclaim a great national emergency merely because it is necessary to send an expedition of 12,000 or 15,000 men out of the country. On the other hand, if you cannot get your Reservists, you have either to send young soldiers who are not fit to send out of the country, possibly to a dangerous climate, or you have to turn those young soldiers out of your home battalions, and fill them up by means of drafts taken from other battalions, a most objectionable arrangement, not only because it is detrimental to *esprit de corps*, but also because when you have eviscerated a certain number of battalions in that manner, if the thing goes on and you have to call upon those battalions, you find that you have practically destroyed their value as fighting units. It was for that reason that in 1898 I introduced a short Act to amend the law relating to the Reserve Forces and Militia, giving us power to call out a number of men not exceeding 5,000 without proclaiming a national emergency. Our idea was that that would enable us to send a force of about 12,000 men out of the country.

21342. And that was passed?—That was passed, but it was passed, I think the Commission ought to know, not without a good deal of suspicion and difficulty. It was criticised from two points of view. Parliament is extremely jealous of giving the Government of the

day too great facilities for sending expeditions and making war, and one trend of thought is adverse to any proposals of that kind; the other is a different one; it is partly the feeling of the men themselves, and partly the feeling of the employers, that a man who has left the Army and gone back into civil life as a Reservist is at a disadvantage if he is liable to be called up at any moment and sent away to take part in a "little war."

21343. In connection with calling out an Army Corps or a portion of it, does the money for the necessary equipment, in the shape of horses, and so on, automatically become available, because we had some evidence to show that was one of the blots of the system—that those concerned could not put their hands immediately on the money required to produce the necessary outfit when an Army Corps was called up?—I am not aware of any provision under which money is ever provided automatically.

21344. Would not that appear to be a blot rather, and if it was desirable for you to call out 5,000 men, would it not be equally desirable that they should be equipped at once or that the money should be forthcoming for the equipment?—The money for the equipment of 5,000 men?

21345. Or for the Army Corps itself?—I think you must distinguish; there would probably be no great difficulty about the equipment of the small force.

21346. I think we have had it in evidence in connection with the Army Corps that was called out first of all, that there was some delay in providing the necessary outfit on account of the want of money—the money was not forthcoming immediately?—I do not think there can have been any delay in providing money for the First Army Corps, because the preparation of the First Army Corps was not authorised until the 22nd September, 1899, and by that time we could have spent money on anything we pleased.

21347. (*Sir John Jackson.*) It has been stated in evidence that the military authorities had not realised the fighting qualities of the Boers, and in point of fact that they calculated that the war would be over by November; did not that show something wanting on the part of the Intelligence Department—the fact that the authorities did not sufficiently realise that?—I think the purport of my evidence in chief was that while the Intelligence Department was fairly well informed as to the strength of the Boers, they did not fully realise their fighting value and their power of endurance in the field.

21348. On that point, of course, we had had experience of the Boers in the previous wars, had we not?—I think you would probably be told—I think there was an impression—that the Boer of to-day had become from various reasons less formidable than the Boer whom we had known in the field in former wars, but I doubt whether the experience of this campaign bore out that theory.

21349. The experience shows they have not deteriorated?—I should say so.

21350. We have also had it in evidence that very little money indeed was ever given to Intelligence officers for expenses in South Africa; do you not think that a bad plan?—Yes; I think probably one of the good results of the South African War will be that the importance of the Intelligence branch will receive greater recognition, and that it will be more liberally supplied with funds. I suppose you are aware that my successor has improved the position of the Director-General?

21351. Of course, we have heard a great deal about the risk there was of precipitating a war in June, 1899; I understand that you are of opinion that if we had spent more money and sent out considerably more men in June, showing our firmness and our intention to fight if necessary, that would rather have tended to have made difficulties than otherwise?—I think it would have been likely to shipwreck the negotiations which were proceeding, and which we to the last hoped to be able to bring to a satisfactory conclusion.

21352. (*Sir John Edge.*) And I suppose if we had called out an Army Corps in June and made large preparations, and war had been the result, it would have been said at home, in South Africa, and abroad, that we had precipitated the war?—I think that is evident. You must remember that there was a strong feeling both in this country and abroad and in South Africa of suspicion, engendered by the Jameson Raid, and I doubt extremely whether if we had gone, as I conceive,

prematurely, to Parliament in the month of June, 1899, and asked for a large war expenditure, we should have got it.

21353. And even if you had got it, I rather assume we would have given the opportunity, at any rate, to our enemies, of saying we had provoked the war ourselves?—I think so; I think it would have made this difference—that whereas when war actually broke out we had the whole of the country at our backs, which made a very great difference in our position, both here and abroad, if we had forced the pace and brought on hostilities sooner, we should not have had the same support.

21354. Am I right in assuming that the Jameson Raid really made difficulties in the way of taking precautions that might otherwise have been taken?—I think it certainly had the effect of creating deep-seated mistrust of us in the mind of the South African Republic.

21355. If we had sent out large reinforcements to South Africa early in 1899, or even before that, or during the Bloemfontein Conference, do you not think the preconceived mistrust of us would have been increased?—I think so.

21356. And the Boers by that time were practically ready for war; they had practically got all the guns except a few that were ultimately never delivered, and they had got their munitions?—At any rate they had sufficient quantities of arms and ammunition to render them well able to commence hostilities.

21357. And if we had moved before the Bloemfontein Conference, or even during the Bloemfontein Conference in 1899 we might have precipitated war?—I think so.

21358. I do not know whether I am justified in asking the question, but is there any fund out of which moneys could be provided for the obtaining of information by the Intelligence Department?—Do you mean any special fund outside the ordinary War Office Estimates?

21359. Yes?—No, I think not; the expenses of the Director-General's Department would form an item in the War Office Vote.

21360. Supposing a considerable amount had been spent in trying to obtain proper maps in South Africa—mapping the country—would that have appeared on the Estimates?—I do not know that it would have appeared on the Estimates that the expenditure was incurred in particular for maps, but it would be shown as being incurred on behalf of the Intelligence Department.

21361. The place would not have been ear-marked where the expenditure was incurred?—Not necessarily.

21362. We have heard that the officers who were sent out to obtain what information they could were very slenderly provided with money?—Those mapping operations were no doubt conducted on a very modest scale, but I do not know that anything else was proposed to me; it was proposed to me that we should send out officers, and I at once agreed to it.

21363. I suppose if we had proceeded after the Jameson Raid to any extensive mapping that might have been likely to be misunderstood by the Boers?—I cannot imagine anything that would have had a more alarming effect upon them than if a whole gang of Engineer officers had appeared in the country map making; it had to be done with very great secrecy, and it could not have been done for that reason on a large scale.

21364. (*Sir John Jackson.*) The Boers' preparations on the other hand, we may say clearly showed that they intended fighting?—I think they clearly showed they were prepared for a fight, but I have never been convinced—I certainly was not convinced at the time—that they were preparing for offensive operations.

21365. If they were preparing for offensive operations it could only be against us?—You recollect, for example, that the Boers acquired a certain number of very heavy guns—guns which afterwards became so notorious when they were moved about the country; all our information was to the effect that those guns were for the defence of Pretoria, and we know—in fact, at the time I was shown the plans and the sketches of them—there were works actually constructed outside Pretoria for that purpose.

21366. (*Sir John Edge.*)—The Portuguese were not likely to attack them, I suppose?—I think not.

21367. It could only have been intended for a struggle with England?—Yes.

21368. (*Sir Frederick Darley.*) If the Government in the month of June, or earlier in 1899, had asked Parlia-

27 Mar. 1903.

ment for a considerable sum of money, of course they would have had to disclose their hand, and say what they wanted that money for; do you not think that would have been treated by the Boers as in effect a declaration of war against them?—That was certainly my opinion, and is now.

21369. And they would have at once sent in an ultimatum, and invaded the Colonies?—At any rate it would have put a stop to any prospect of a successful issue for the negotiations which were then proceeding.

21370. Do you not think they would have gone further, and that there would have been a war actually precipitated then and there?—I put it in this way, that I feel sure it would have shipwrecked the negotiations, and that in my belief it would probably have induced earlier hostilities by inducing the Boers to anticipate any precautions we might take for securing ourselves in the two Colonies.

21371. And that would have taken place before even the troops in India could have reached there?—Certainly.

21372. So that, in point of fact, the difficulty the Government was in at the time was not merely a question of preparing the people in this country for the possibility or probability of a war breaking out?—That is quite true.

21373. It has been stated here by a witness, that in view of that very point, the necessity of the Government having to go to the House to ask for a sum of money in order to enable them to prepare for a war which, in their opinion, might become necessary, there should be a sum always standing to the credit of the War Office or the Admiralty, but to be drawn upon only by the Cabinet, independently of Parliament, just as foreign nations do. How do you think that would work under our Constitution? The sum mentioned by witness was the sum of ten millions of money?—I am afraid you would not persuade the House of Commons to vote ten millions of money upon such conditions.

21374. Still, if it could be done, it would have put the Government in 1899 in a very much better position if they had the power of preparing stores and equipment, and so forth, independently of having to go to Parliament for the money?—I cannot imagine anything more delightful for the Secretary of State than to be emancipated from the restrictions which our Parliamentary system imposes upon him.

21375. It would have been better for the country, too, at that time?—It might have been better for the country.

21376. (*Viscount Esher.*) Would it not throw much greater and heavier responsibility upon the Secretary of State and on the Government generally? For what you mean is, that practically you would embark upon hostile operations before consulting Parliament?—I think that is true; in case of operations of any magnitude, the Government must have the country at its back, and if it has the country at its back the country will give it the money at once.

21377. I think there is very little doubt that if you had had the sum of ten millions at your disposal during the months of June and July, 1899, you would have felt very much tempted to make the preparations which you, yourself, think, if made, would have precipitated the war?—Quite so.

21378. I suppose that, on the other hand, there might be some advantage in altering the statute under which you have to apply to Parliament before you mobilise troops. I understand you would have been unable to carry out Lord Wolseley's suggestion to mobilise an Army Corps on Salisbury Plain without complying with the statute?—You have to make a Proclamation of national emergency, and call Parliament together within a very few days; I forget the exact number.

21379. Might it not perfectly reasonably occur that the Government might desire, even for purposes of training, to mobilise an Army Corps, calling out the Reserves? Is it not a reasonable assumption to make that it might be desirable in the interests of the training of troops, quite apart from the question of peace or war, to call out an Army Corps, and mobilise it as suggested by Lord Wolseley, including the Reserves? Under the present circumstances you cannot do that without calling Parliament together, and issuing the Proclamation, to which you have just referred?—That would really be

for the purpose of something corresponding to what we call manœuvres?

21380. Yes?—Quite so; but as you know even for manœuvres we used to have a special Bill; I think now there is a general Bill, which was brought in in my time.

21381. But it does not enable you to call out any proportion of the Reserve; is not that so?—No, it does not.

21382. Would you see any objection to empowering the executive Government to do that without having to issue a Proclamation, and, if necessary, call Parliament together?—From the point of view of the Army it would be a very salutary thing, but what makes me hesitate is, that I think you would then be met with the difficulty which I mentioned a moment ago—the difficulty of the employers of labour; they would resent very much having a man who might be spirited away from them, perhaps in harvest time or at some other moment when he was wanted, for these military exercises.

21383. What do you imagine was the reason of the Statute which prevents you from calling out the Reserves without calling Parliament together, and without issuing that Proclamation; was it not to tie the hands of the Executive Government?—Yes; to prevent the Executive Government from making war without consulting Parliament and the nation.

21384. Do you not think that, on the other hand, the natural restriction of want of money is sufficient? Do you think, in fact, that particular Statute is necessary?—I think you would find it difficult to carry the repealing Bill through Parliament.

21385. If it could be carried, you would not see any harm in it?—No.

21386. It is only carrying Sir Frederick Darley's suggestion a little further?—Yes.

21387. You told us yesterday that, in view of the possibility of hostilities, you had frequent consultations with your military advisers. During those years after the Raid, and up to the time of the outbreak of the war, did you ever get from your military advisers any joint remonstrance for not strengthening the garrisons in South Africa?—No; I do not think so.

21388. You were never approached by the Commander-in-Chief and the Adjutant-General and the Quartermaster-General and the Inspector-General of Fortifications, and so on, with any joint representation that it might be desirable, in view of the facts laid before them by the Intelligence branch, to increase the garrisons in South Africa?—I can call to mind nothing of the kind; in fact, as I told the Commission when I came into the room this morning, I can recollect nothing between the Commander-in-Chief's proposal of the 22nd February, 1896, when he asked for a very small increase of the South African garrisons, and his large demand in June, 1899.

21389. But the Commander-in-Chief and the Adjutant-General unquestionably had access to all the information of the Intelligence Branch?—Undoubtedly; the Director of Intelligence was one of the Commander-in-Chief's subordinate officials; that is made clear by the Rules of Procedure.

21390. You told us you were not quite certain that you yourself, personally, had seen all the correspondence that passed between the Intelligence officers in Africa and the Intelligence branch in London, although you told us you thought you might have seen it?—At any rate, I was aware of the condition of things described in those papers.

21391. Of course, you have no kind of doubt that what information had been seen by the Commander-in-Chief?—Surely; it was the Director-General's business to report to the Commander-in-Chief.

21392. Have you any reason to suppose that, upon obtaining that intelligence, he had ever consulted the other high military officers in the War Office with regard to the state of affairs disclosed in that information?—I have no trace of any such proceeding.

21393. If he had been impressed with the great seriousness of the situation, and had consulted the Adjutant-General and the Quartermaster-General and the Ordnance Department, which one would naturally have supposed he would have consulted under such circumstances, and then if they had made a joint

The Right Hon. the Marquis of Lansdowne,
K.G., P.C.
G.C.S.I.,
G.C.M.G.,
G.C.I.E.

27 Mar. 1903.

representation to you, would it not have considerably influenced you?—It would have considerably influenced me, even if it had been a single-handed representation from the Commander-in-Chief alone. Supposing, I mean, that the Commander-in-Chief had put forward a representation of that kind in the same way, and with the same emphasis and earnestness in which he put forward his proposals for an increase of the Army in the Minute of February, 1896, that, of course, would have been a very weighty proceeding, which would have impressed me and, no doubt, the Cabinet.

21394. (*Sir Frederick Darley.*) I think you stated there was no demand made by Lord Wolseley between 1896 and 1899. Would you be good enough to look at the end of Questions 8744 and 8745; I have no doubt the troops mentioned there were afterwards sent, but I think you will find Lord Wolseley does ask for troops there?—Those were the small increases to which I referred in my evidence; they were first mentioned in Lord Wolseley's minute in the appendix to the minute of 1896, dealing specially with the Cape, and I say that not only those increases, but more than those increases were granted during the two years which followed.

21395. He sets out his minute in that answer there; in point of fact, I think the troops he mentions there were sent, and he mentions a large quantity of transport there, too?—The troops were certainly sent.

21396. (*Viscount Esher.*) With regard to Sir Henry Brackenbury's representations at the end of 1899, and the facts disclosed there to you, I think they should have been previously known, or might have been known, or, for all we know, were known, to the Commander-in-Chief, the Adjutant-General, and the Quartermaster-General?—Yes; there again I give the same sort of answer as I gave just now. I have not a doubt that Sir Henry Brackenbury's predecessor often asked for things on the estimates that he did not obtain. Naturally, the heads of departments are always asking for this, that, and the other thing, and they do not always get what they ask for; but no reasoned, comprehensive demand such as that embodied in Sir Henry Brackenbury's minute disclosing the condition of our stores and equipment was, to the best of my belief, put forward until Sir Henry Brackenbury came.

21397. Of course, that is a very serious document?—A very serious document.

21398. It is incredible that any such document could have been laid before you between the year 1895 and the year 1899 without your recollecting it, and therefore it is obvious no such document was ever laid before you?—No such document was ever laid before me.

21399. Would you not conceive it, after all, to be the duty of the principal military officers concerned to make themselves acquainted with a state of facts such as that disclosed in Sir Henry Brackenbury's memorandum?—It is their duty; certainly; but one man will take a matter up more strenuously than another.

21400. Should the responsibility be left to one man, do you think?—You mean, should the responsibility in a case of that kind be left to the Director-General of Ordnance?

21401. Yes; does it not strike you that the state of facts there disclosed should have been known to the officers who were really responsible for the Army?—In my view, the officer who is really responsible in those matters is the Director-General of Ordnance.

21402. Certainly, he is primarily responsible, but would it not occur to you that the Commander-in-Chief, for instance, if you take him as being the officer responsible for the whole of the Army, should make himself acquainted with the condition of our armaments, with the equipment, and with the clothing, etc., etc., etc., deficiencies as to all of which were disclosed in that memorandum?—You must remember that the Commander-in-Chief under our system is an officer who has an immense amount of work—I think more work than he can possibly get through—thrown upon him, and therefore there would always be a great temptation to an officer who was put in that position to take up a limited number of subjects, probably the subjects about which he knows most or in which he is most interested, and he will, not unnaturally, depend upon the heads of departments for advice as to the rest.

21403. You must not suppose for a moment that I

am imputing blame to any individual; I am only trying to get at the defects of the system, and it seems to me that there must be some serious defects in a system under which a state of facts such as that disclosed in Sir Henry Brackenbury's memorandum were not brought to the attention of the Commander-in-Chief or the Secretary of State between 1895 and 1899. That is my point, and I think you would agree with that, would you not?—That if you had a perfect system administered by faultless people those things could not happen, but I doubt whether you will ever contrive a system of that kind.

21404. You have had very great experience in India; do you think such a state of facts could arise in India without its being brought to the attention of the Viceroy and the Government?—That is a conjectural question.

21405. You can only give an opinion?—Well, the position in India is so different. In India you have not got to reckon with Parliament; that makes a great difference, because here we know, and every head of a department knows, how difficult it is to get money, and therefore unless a man is very energetic and very convinced, the temptation to him is to take things easily, and to be content with what he can get.

21406. There was only one other question I wanted to ask you, because it was not made quite clear yesterday. I do not know whether you remember that Sir Redvers Buller, among several complaints he made, said this: "I think there should have been a consideration of the intended expedition at which the Commander-in-Chief designate should have expressed his views before the Army Board or the Defence Committee of the Cabinet, or before some board who would have heard what he had to say, and he would have had an opportunity of raising a large number of questions that I should have liked many times during the three months to raise, but I never had any opportunity." I take it that it was not within the province even of the officers composing the Army Board to invite him to attend, was it, or could they have done so if they had wished?—Strictly speaking, perhaps not; but I think if that was Sir Redvers Buller's view the proper course for him to take would have been to mention it to the Commander-in-Chief or to me. There would have been no difficulty in arranging that he should meet the members of the Army Board.

21407. It was open to him to suggest that he should be called before the Army Board if he wished to be?—Of course, or before the Defence Committee of the Cabinet or before the Cabinet itself; if he had suggested that it would have cleared his mind and made his task easier that he should have a full opportunity of discussing these matters, that opportunity would surely have been given to him.

21408. (*Sir John Edge.*) I am not familiar with the way work is done in the War Office. Would the Commander-in-Chief have any means of knowing what the state of the ordnance was except through the Director-General of Ordnance?—So far as the War Office is concerned he would derive his information from the Director-General.

21409. Would the Adjutant-General, for instance, know anything about the condition of the ordnance *quâd* Adjutant-General?—The Adjutant-General under the system which was in force at the time of which you are speaking had his own distinct sphere.

21410. *Quâd* Adjutant-General, he would know nothing about it?—*Quâd* Adjutant-General, he need not know anything about it, but *quâd* member of the Army Board, he probably would.

21411. The same would be the fact about the Quartermaster-General; *quâd* Quartermaster-General, his own department would not deal with the question of ordnance?—No, and he would not be the responsible adviser of the Secretary of State with regard to ordnance.

21412. Who is the responsible adviser with regard to ordnance—the Director-General of Ordnance?—Yes.

21413. And he is the only official really who is responsible?—The Director-General of Ordnance shall be charged with supplying the Army with warlike stores and equipment, and he shall submit proposals for the annual estimates for the above services, and shall advise the Secretary of State on all questions connected with the duties of his department. (*Vide Order in Council of 4th November, 1891.*)

21414. Do you happen to know whether at that time the Commander-in-Chief could have called for a report

27 Mar. 1903.

from the Director-General of Ordnance?—That is a very important point; the Commander-in-Chief under this Order in Council which I have just quoted, exercises general command over His Majesty's military forces at home and abroad; he is the principal adviser of the Secretary of State on all military questions, and, subject to his authority, is charged with the general supervision of the military departments of the War Office. Now, in the view of those who were responsible for that Order in Council, that general supervision gave the Commander-in-Chief the distinct right of interesting himself in the affairs of any department in the War Office.

21415. Calling for a report from the head of any department in the War Office?—Certainly; and I may say that Lord Wolseley himself certainly understood that, because I have here a minute signed by him, dated October 4th, 1900, which runs thus: "Director-General of Ordnance. Is it true that all further progress in the manufacture of the 9·2-inch guns has been suspended for more than the last three months on account of changes in the construction lately determined upon? I do not want to worry you, but I deeply feel our present condition as regards the armament of our ports and fortresses both at home and abroad." I think that minute shows that the Commander-in-Chief had the right of calling for reports such as you referred to, that he was aware of that right, and that he did, in fact, exercise it.

21416. And if he was not satisfied with the papers that came before him from the Director-General of Ordnance, he could call for a further report?—Yes, or if he wished to start a hare of his own, so to speak, he could do so.

21417. (*Sir Frederick Darley.*) Is it your opinion that, taking all matters into consideration, including the natural disinclination of the Government to do anything which would precipitate war, at the time the war broke out you were, under all the circumstances of the case, sufficiently prepared for that war?—I do not think we were; I think the operations assumed proportions far in excess of anything we had ever professed to be prepared for.

21418. Who, would you say, was responsible for that—what department? Is it the country itself or Parliament?—The then Government and the Governments which preceded it, and Parliament, in so far as it determines the strength of the Army to be maintained and the amount of our military expenditure.

21419. In point of fact, it is the people themselves who were responsible for the non-preparation?—I think you have had mentioned to you the often quoted memorandum of Mr. Edward Stanhope, laying down that our organisation was to proceed upon the basis of three Army Corps, of which two were to be composed of Regular troops; that has been the accepted basis ever since Mr. Edward Stanhope's time; that basis has, I believe, been referred to in Parliament.

21420. So that for the want of preparation, such as it was, it is really the people who are responsible through Parliament?—You might put it in that way.

21421. (*Sir John Jackson.*) In fact, the great disinclination of the House of Commons to vote money for war purposes until we are absolutely at war?—I am not sure that I should put it entirely on that; I think I should put it much more upon the fact that no one ever anticipated that we should have to send a field force of those dimensions out of this country at a few days' notice.

21422. But it is the case that for many past years there always has been a great disinclination to vote money for war purposes until we were absolutely at war, and then the country comes forward?—I think that is true.

21423. (*Chairman.*) You alluded just now to the minute of Mr. Stanhope, and said that it had been explained more than once. We have this statement from one witness; he was asked: "But the minute of Mr. Stanhope, or the effect of that minute, was known," and he answered: "Very little, I think; I think I am right in saying that it was never authoritatively published. It was known inside the War Office, but for a long time it was highly confidential"?—The

minute itself; but I am sure the two Army Corps basis must have been again and again referred to.

21424. And it was based on the recommendations of that minute?—That minute was accepted by successive Secretaries of State.

21425. (*Chairman.*) We now get the questions with regard to War Office reorganisation, and in the first place, I suppose, you would wish to refer to the Order in Council of 1895, for which I believe you were responsible?—I was responsible for that Order in Council. In reference to that I call the attention of the Commission to my minute written for the Cabinet on the 31st October, 1895, which I now put in:—

MINUTE BY THE MARQUIS OF LANSDOWNE ON THE 31ST OCTOBER, 1895, AS TO WAR OFFICE REORGANISATION.

The scheme sketched by me in the House of Lords on the 26th August may be fairly described as a compromise between two extreme views, both of which have been strongly urged by their supporters.

1. It is contended that we should make a strong Commander-in-Chief directly responsible to the Secretary of State, with Heads of Departments responsible and entirely subordinate to the Commander-in-Chief. This is practically the existing system.

2. The opposite view is that the Heads of the four great Departments should be independent of the Commander-in-Chief, and that we should not give him, even indirectly, authority or influence which would impair their responsibility to the Secretary of State.

The scheme has been exposed to a cross-fire of criticism from the advocates of both these views. I do not think it has suffered more severely than was to be expected, or that it will be necessary to alter it materially. The strongest condemnation has proceeded from a misunderstanding or misrepresentation of our intentions. We have been told that we are attempting to place the Commander-in-Chief and the Heads of the four Departments in a position of absolute equality, and that this is a *reductio ad absurdum* of the principle of individual responsibility. A writer, to whose letter prominence was recently given in the "Times" newspaper, described them as being officials, "none of whom are to be greater or less than the other, none afore or after the other." The argument has been pushed home most successfully with regard to the relation of the Commander-in-Chief and the Adjutant-General. "How," it has been asked, "can your Commander-in-Chief really command, how can he have any responsibility for the efficiency of the forces under him if he is precluded from interference with their discipline?" It was, I need not say, always our intention that the pre-eminence of the Commander-in-Chief should be distinctly recognised, and for this reason we had made him the principal adviser of the Secretary of State*, and given him, as such, an unlimited right of advising the Secretary of State upon questions arising in any of the departments. In questions of discipline, as in all others, the Commander-in-Chief would, under the scheme as it stands, certainly have had his say.

The persistence with which these criticisms have been repeated makes it, however, clear that in framing the actual wording of the Order in Council we must be careful to preclude the possibility of any misunderstanding upon this point.

Under the draft, which was before the Committee of the Cabinet in August, the Commander-in-Chief was, in effect, charged with the whole of the duties which the Hartington Commission had assigned to the Chief of the Staff. I attach a memorandum enumerating, in the words of the Commission, the duties of the Chief of the Staff, and specifying those of them which will belong to the Commander-in-Chief.

In addition to these he will be entrusted with—

(a) Appointments to commissions, promotions, and military honours and rewards.

(b) The general command of the forces at home and abroad.

It would, no doubt, be possible to deprive the Commander-in-Chief altogether of (b), and thereby to advance another step in the direction of the second of

* The Hartington Commission had, it will be remembered, recommended that the Chief of the Staff should be the adviser of the Secretary of State in all matters of general military policy.

the views indicated at the commencement of this memorandum.*

This solution of the difficulty does not commend itself to me. I am averse to any arrangement under which the Commander-in-Chief would be shorn of the attribute which, in the eyes of the public, most contributes to the dignity of his position. What would be said of a Commander-in-Chief who inspects, advises, appoints, and rewards, but does not command? We should be told that, after announcing that we had decided not to create a Chief of the Staff, we had called him into existence under another name and in the thinnest of disguises.

Another suggestion has been to limit the interpretation of (b) to command of the *personnel* of the Army only, and on that ground to remove the Adjutant-General from his place in line with the other Heads of Departments, and convert him into a subordinate of the Commander-in-Chief. This would undoubtedly meet the argument against divorcing discipline from command, to which I have referred above; but I should deprecate the change on the ground that it would make a marked and logically indefensible distinction between the relations of the *personnel* and supply services to the Commander-in-Chief.

It will, I believe, be safer to proceed upon a different line, and to frame the Order in Council in terms which will unmistakably show that the Commander-in-Chief, as the principal military adviser of the Secretary of State, is in a position different from that of the other Heads of Departments, a position giving him a general power of supervising and directing the whole of the military work of the office.

The necessity of some such supervising authority in regard to the purely military business of the office is, I think, obvious. The scheme of the late Government gave the Commander-in-Chief, as President of the Army Board, powers of "co-ordinating," or in other words "regulating," the work of the Military Departments. The Army Board has now, for reasons which I need not here explain, been relegated to the background, and will have no place in the written constitution of the office. But the necessity for a supervising or co-ordinating authority is as imperative as ever. In the daily business of the Military Departments, cases constantly arise, not of sufficient importance to justify a special reference to the Secretary of State, but requiring, because they concern more departments than one, the decision of an official whose authority will not be questioned.

Military opinion is, moreover, unanimous in holding that the attempt to dissociate the Commander-in-Chief, even in appearance, from the control of the discipline of the Army would be fraught with danger, and that no scheme will work, or be understood by the Army, which does not give the Commander-in-Chief an undoubted right of interference in questions of discipline.

I therefore propose that in describing the duties of the Commander-in-Chief, we should lay down that he is to be "the principal adviser of the Secretary of State on all military questions, and shall be charged with the general direction of the Military Departments of the War Office." These words seem to me amply sufficient for the purpose of giving the necessary strength to the position of the Commander-in-Chief, not only in regard to discipline, but in regard to all other military questions.

The Heads of Departments are, I think, under the scheme as now revised, left with as large a measure of responsibility as can practically be given to them. Their existence will, for the first time, be recognised in the Order in Council, under which they will be charged with specific duties and required to advise the Secretary of State on all questions connected with the duties of their departments. This is a very considerable advance. The Order in Council of 1888, now in force, concentrates upon the Commander-in-Chief the whole of the duties of the Military Department of the War Office, and ignores the Heads of Departments, who are not even mentioned in the Order. There is a very general desire for a more explicit recognition of their separate responsibility. In practice, no doubt, the actual distribution of the work has not corresponded with the Order in Council. A great part of his duties have, for example, been dele-

gated by the Commander-in-Chief to the Adjutant-General. This officer, and the other Heads of Departments, have, moreover, had direct access to the Secretary of State, a privilege of which they have availed themselves very frequently during recent years. In the written constitution of the Department, however, the Commander-in-Chief is the sole recognised adviser of the Secretary of State upon military affairs. It is this theoretical concentration that has evoked so much criticism, and supplied the Hartington Commission with the materials upon which to found their main indictment. The Press has taken up the question, and members, both of the late and present Government, have admitted that a revision of the constitution of the Department was necessary.

We are therefore, I conceive, obliged to go as far as we can in the direction of giving separate responsibility to the Heads of Departments. How far can we go? Absolute independence and complete responsibility are out of the question—

(a) Because, in five cases out of six, more than one department is concerned, and responsibility cannot therefore be fastened upon a single officer. The proposal to alter the armament of a fort, for example, concerns the Inspector-General of Fortifications, the Inspector-General of Ordnance, the Adjutant-General, and the Quartermaster-General. No one of these officers can be made individually responsible for the advice tendered to the Secretary of State;

(b.) Because complete responsibility implies complete power, and complete power implies complete control over expenditure. Heads of departments are, however, subject to the financial control of the Secretary of State; of the Cabinet; and, in the last resort, of Parliament.

These are obvious limitations to their responsibility. It might, perhaps, be added that so strongly imbued are most soldiers with ideas of military discipline, that, except in very extreme cases, the head of a department would be reluctant to press his view of a case against that of the Commander-in-Chief. That this feeling exists is a matter of notoriety. The risk, I am satisfied, is not, as some critics have anticipated, that the Commander-in-Chief would be out-voted at the Army Board, but that the Army Board, or the departments represented at it, would merely register the opinion of the Commander-in-Chief. Much would, of course, depend upon the character of the individuals concerned; but it would always be difficult for, say, an Inspector-General of Ordnance to take upon himself to thwart a proposal strongly advocated by the Commander-in-Chief, who is the source from whence flow promotion and appointment.

It does not, however, by any means follow that no responsibility can be assigned to the heads of the Military Departments. Each of them is, in the first place, charged with carrying out the special duties assigned to him; executive responsibility is not impaired or destroyed by general control, whether financial or otherwise. If a barrack tumbles down the Inspector-General of Fortifications will know that he is responsible for the failure. If the troops find themselves short of food during manœuvres, the Quartermaster-General will be to blame. If a batch of bad bayonets are issued, or shells fail to explode in action, the Inspector-General of Ordnance will be taken to task.

The Order in Council, and the Rules of Procedure, have been so framed as to make it understood by each head of a department that, as one of the Secretary of State's advisers, he is responsible for warning the Secretary of State whenever anything affecting the efficiency of the department is, in his opinion, wrongly done, or left undone.

With this object in view each head will have free access to the Secretary of State, as well as an opportunity of recording his opinion upon the papers concerning his department, and of raising his voice at meetings of the Army Board or the War Office Council.

Under such a state of things they would, I believe, feel a very real though limited responsibility. Such a degree of responsibility appears to me consistent with the power of general direction, which I have shown to be inseparable from any real command-in-chief, and,

by common consent, essential to the efficient working of the military side of the Office.

(Initialled)

L.

31st October, 1895.

The Commission will find in that Minute a very full explanation of the principles upon which the Order in Council of 1895 was framed. I think it would be better that I should leave that Minute in your hands, rather than that I should travel over the same ground in a statement. There is a second Minute, written some time afterwards, on May 8th, 1899; it is instructive, because it contains my impressions of the manner in which the system introduced in 1895 had operated during those four years, and I put that in.

MINUTE BY THE MARQUIS OF LANSDOWNE OF 8TH
MAY, 1899.

A few days before the present Government took office in 1895, Sir Henry Campbell-Bannerman had announced to the House of Commons that the retirement of His Royal Highness the Duke of Cambridge was to take place on the 1st October next, and he proceeded to give a general indication of the arrangements which were to follow His Royal Highness' relinquishment of office. Those arrangements were to be in accordance with the "main principles" of the Hartington Commission, which it will be remembered had advocated the abolition of the office of Commander-in-Chief, the distribution of his duties among the heads of the Military departments, and the appointment of a Chief of the Staff. The recommendations of the Hartington Commission had received considerable public support.

Under Sir Henry Campbell-Bannerman's scheme there was to be substituted for the appointment of "Commander-in-Chief," as it then existed, the appointment of a "General Officer Commanding-in-Chief" with "greatly modified functions," and holding office for five years under the ordinary rules.

The manner in which these arrangements were to be carried out formed the subject of considerable discussion. It was particularly desired that the Commander-in-Chief should be given a distinct pre-eminence with regard to the other members of the Army Board, and that he should be described as "the principal adviser" of the Secretary of State. The old title of Commander-in-Chief was accordingly retained, and it was laid down in the Order in Council of 21st November, 1895, that he should be "the principal adviser of the Secretary of State on all military questions, and shall be charged with the general supervision of the Military Departments of the War Office."

In order still further to secure to the Commander-in-Chief this power of "general supervision," it was laid down in the details of office procedure, shortly afterwards published, that "all important questions will be referred to the Commander-in-Chief before submission to the Secretary of State."

These regulations reserved to the Commander-in-Chief a far larger measure of control and authority than was contemplated by the Hartington Commission by the late Government, or by the advocates of decentralisation in the press.

Of the absolute soundness of these arrangements, Lord Lansdowne feels no doubt. He holds strongly that it was essential to put an end to the old system under which the whole of the responsibility for all the Departments of the War Office was concentrated in the Commander-in-Chief. That officer, it must be remembered, is charged, not only with the general command of the forces at home and abroad, and with such duties as those of inspection, etc., but with "the preparation and maintenance of detailed plans for the mobilisation of the Regular and Auxiliary Forces, with the preparation and maintenance of schemes of offensive and defensive operations, and with the collecting and compiling of military information." The importance of these latter duties, which are those discharged in the armies of other countries by the Chief of the Staff, cannot be over-estimated, and, if the Commander-in-Chief is not relieved by such a measure of decentralisation as that which is now in force, it is humanly impossible that they should be properly performed.

It was for these reasons that the Cabinet decided that he should be referred to by heads of departments only in regard to important questions.

There is obviously some difficulty in determining what cases shall be regarded as falling within this category. A different construction might very likely be put upon

the words by different Commanders-in-Chief, or different Secretaries of State. Lord Lansdowne, in administering the War Office, has endeavoured to conform strictly to the spirit as well as to the letter of the rules, and to see that others observe it; and, so far as he is aware, it has been observed. If there have been omissions, he has always been ready to support the Commander-in-Chief in a demand that he should be more fully consulted.

Such consultation seems to Lord Lansdowne specially necessary in regard to cases involving questions of discipline. He has recently referred to a series of papers dealing with the most important discipline cases that have arisen within the last four years, and he finds that in no single one of them was there any failure to refer to the Commander-in-Chief. The suggestion that the Commander-in-Chief should be given, by Order in Council or otherwise, a special right of intervention in regard to questions of discipline does not, however, commend itself to him. To single out one Department and say that in respect to it the supervision of the Commander-in-Chief should be of a special character, seems to Lord Lansdowne calculated to weaken that general right of supervision and title to be consulted in all important cases, which the regulations, as they stand, already provide for the Commander-in-Chief.

Lord Lansdowne has had under consideration the expediency of issuing a minute calling the attention of the Headquarter Staff and other officials of the War Office to the regulations of which he has explained the substance in this paper. It seems to him, however, that before taking a course which would be tantamount to a censure of those concerned for their implied failure to conform to the regulations, it should be shown that there has been a habitual departure from them. It is not, he understands, alleged that this has been the case, and after consultation with the Commander-in-Chief he has decided not to issue such a minute for the present. The point will, however, be kept in view, and if the Commander-in-Chief will bring to Lord Lansdowne's notice important cases in which there has been a failure to refer to him, measures will be taken to insure that the proper procedure shall be followed.

Lord Lansdowne intends that this paper should remain on record in the War Office for the guidance and information of all concerned.

8th May, 1899.

There is also my minute of 1900, which has been laid before Parliament, and which the Commission has seen.

21426. The last memorandum you spoke of was one which was presented to Parliament?—Yes.

21427. Do you wish to make any further observations with regard to the organisation of 1895?—No. I really do not think I need add to those observations; I may say I remain very much of the opinion which is expressed in those minutes. Perhaps I should say just one word with regard to the change in the system which has been introduced by my successor—the change, I mean, which had the effect of altering the position of the Adjutant-General. Under my scheme the Adjutant-General was head of his own Department, and only under the supervision of the Commander-in-Chief. My successor, in deference to very strong expressions of military opinion, put the Adjutant-General back into a position distinctly subordinate, under the control and not under the supervision of the Commander-in-Chief. My feeling about that is that while I adhere to the reasons which induced me to put the Adjutant-General in a quasi-independent position, I feel that in a case of that kind you cannot ignore the great weight of solid military opinion in favour of putting the Adjutant-General in a different position from the other heads of Departments—in a position, namely, of more direct subordination to the Commander-in-Chief.

21428. But it was not a part of your scheme that the Adjutant-General should be forbidden access to the Secretary of State, as was stated?—No. I believe that statement was made to you in the passage to which Sir George Goldie called attention just now. I feel convinced that Sir Evelyn Wood misunderstood what was said to him by the Commander-in-Chief. Of course, if the Commander-in-Chief had told Sir Evelyn Wood that he was not to have access to me, the Commander-in-Chief would have been flagrantly violating the Order in Council, and I do not for a moment believe Lord Wolseley would have done anything of the kind.

21429. (*Sir George Taubman-Goldie.*) This is the passage in Lord Wolseley's evidence which deals with this matter, and the answers were given partly in reply to Sir Henry Norman and partly in reply to myself:—
 0-6 "(Q. *Sir Henry Norman.*) You mentioned what I must call the extraordinary arrangements that prevailed at the War Office, that the Adjutant-General and the Quartermaster-General, who, in all previous times, had been supposed to be officers under the Commander-in-Chief, had direct access to the Secretary of State? (A.) Were directly under him. (Q.) Which has now been altered again? (A.) Yes. (Q.) But Sir Evelyn Wood spoke about that; he said that he received instructions not to go to the Secretary of State without your orders. Was he correct in saying that? Would you like me to read exactly what he said? (A.) Yes, if you please. (Q.) I put to him: 'Did I understand you to say that in the period between 1895 and 1900, though you were supposed to be more or less free, as a staff officer holding a very high appointment, to go to the Secretary of State, you did not feel yourself able to go, except with the sanction of the Commander-in-Chief?' and his answer was: 'I was told not to go by the Commander-in-Chief.' Then I asked: 'Does not that seem one way of getting round an order?' (A.) I think it is very possible that I did. I do not remember the circumstances of having ever said those words to him, but it is quite possible that I did. I should think, if I did say it, I told him in very different words. I should have said it was very desirable that he should always come and tell me what had taken place between him and the Secretary of State upon any subject under discussion; that it was necessary that I should know of any discussion that took place between the Secretary of State and any officers supposed to be serving under me. I am sure that was the way I should have put it to him. (Q.) He put it a little more direct? (A.) Yes. (Q. *Sir George Taubman-Goldie.*) But, as a matter of fact, by the Order in Council, he was under your supervision? (A.) 'Supervision' is a curious term; I do not quite understand what it means. (Q.) But that would quite justify you in suggesting it to him? (A.) Yes; I was acting within my rights entirely?"—I read Lord Wolseley's answer as meaning that he did not admit having used the words which were attributed to him, but that he did admit having spoken to the Adjutant-General to this effect: "That it was very desirable that he should always come and tell me what had taken place between him and the Secretary of State upon any subject under discussion" (I think one may fairly assume this refers to subjects of importance, and not to mere trivialities); "that it was necessary that I should know of any discussion that took place between the Secretary of State and any officers supposed to be serving under me. I am sure that was the way I should have put it to him." I think Lord Wolseley probably told Sir Evelyn Wood that it was essential that he (Lord Wolseley) should be made aware of any important discussions between the Adjutant-General and myself. I do not at all object to that, and I think that comes well within the Commander-in-Chief's powers of supervision.

21430. When you submitted the Order in Council of 1895 did you contemplate that you would be able to have confidential communications with the separate heads of Departments or not?—Not, if I may say so, behind the back of the Commander-in-Chief; but what I did distinctly contemplate was that upon a question, let us say, concerning the introduction of a new quick-firing gun, I should have the freest possible consultation with the Director-General of Ordnance, and that it would not be necessary, whenever a consultation of that kind took place, that I should ask the Commander-in-Chief to come into my room and hear it.

21431. But I see in your minute of 31st October, 1895, to which you are referring at present, you say: "It might perhaps be added that, so strongly imbued are most soldiers with ideas of military discipline, that except in very extreme cases the head of a Department would be reluctant to press his view of a case against that of the Commander-in-Chief. That this feeling exists is a matter of notoriety." And a little lower: "Much would, of course, depend upon the character of the individuals concerned, but it would always be difficult for, say, an Inspector-General of Ordnance to take upon himself to thwart a proposal strongly advocated by the Commander-in-Chief, who is the source from which flow promotion and appointment." It was on that account I asked you whether it was not contemplated by the Order in Council of 1895 that you

might feel it necessary to call upon one or the heads of the great Departments in the War Office for his private opinion without exposing him to being in conflict with the Commander-in-Chief by a disclosure of his views?—What was in my mind was that by confidential communication of that kind I should get the actual mind of a man who was an expert in a manner in which I should not get it if I was only to see him in the presence of the Commander-in-Chief and perhaps some other senior officers. It is conceivable that you might have a Commander-in-Chief who had views of his own about artillery, and in such a case your ordnance expert might feel a certain reluctance to put forward his own views in the presence of his superior.

21432. And not only perhaps in his presence, but if he had afterwards to report to that superior what he said to you and what you said to him?—Yes.

21433. The reporting afterwards would have very much the same effect, would it not?—It would not be quite the same thing, but I never contemplated that the Commander-in-Chief should be kept in the dark.

21434. No, that is a different matter?—It is certainly the case that when you have a number of these high officers sitting round a table they will not give you the same absolutely frank, unreserved opinion that they will when you get them quietly into your room and talk to them *tête-à-tête*.

21435. No; we had evidence upon that point from the Director-General of Ordnance, which appears on the notes, that at the War Office Council he might not be prepared to express an opinion which might not be shared by the President; that is natural, is it not?—A great deal depends on the idiosyncrasies of the different heads of Departments.

21436. (*Chairman.*) I think there was also an expression of opinion that military opinion would come out more distinctly in a military board without the presence of the Secretary of State?—I think that is likely, and it was for that reason, in order to give the opportunity for military opinion to form itself, that the Army Board was constituted.

21437. The Army Board as under the regulations of 1895?—Yes.

21438. (*Viscount Esher.*) Then it is the Secretary of State, and not the Commander-in-Chief, who inspires all this alarm. Is not that so?—I have a strong suspicion that the Secretary of State is not so alarming to the military officers as one military officer is to another. The Secretary of State, you see, cannot profess to be an expert; he is, more or less, an ignorant civilian, and has to gather the best information he can from the experts, but as between soldier and soldier you have one expert against another expert, or one expert against another man who considers himself an expert, and that leads to reticencies and suppressions of opinion.

21439. (*Chairman.*) Just to finish up the point you were speaking of before about the access of the Adjutant-General to the Secretary of State, I suppose you did see Sir Evelyn Wood?—Constantly.

21440. You are aware that there have been criticisms by several witnesses on the operation of the Order in Council of 1895?—Yes.

21441. Have you anything to say with regard to them?—Would you indicate the particular criticism?

21442. One is Lord Wolseley's own?—Lord Wolseley frankly objected to the whole system; his idea was a big Commander-in-Chief, with all the heads of departments under him, and I think I have said all that is necessary to combat that view in the minutes you have before you.

21443. There were two principal points I gathered from his evidence which he laid stress upon, and one was the position of the Commander-in-Chief, in which he put it that he ought either to be a member of the Cabinet or to have entry to the Cabinet. That was the position he wished the Commander-in-Chief to have, I think?—I know the idea of adding the Commander-in-Chief to the Cabinet has been advocated on high authority of late, but I have never believed that it would be a good arrangement, nor do I believe that except upon special occasions it is desirable that the Commander-in-Chief should attend Cabinet meetings. He may be a very distinguished soldier, and a very able and competent Commander-in-Chief, but it does not at all follow that upon administrative

questions he is the best person qualified to put his own case before the Cabinet; in other words, if he carries his Secretary of State with him, and gives his Secretary of State a good brief, the Secretary of State, I believe, is more likely to carry the proposals through the Cabinet than the Commander-in-Chief himself.

21444. And under the Order in Council of 1895 was it intended that whenever necessary the Commander-in-Chief should be summoned and state his own case?—That point was not touched by the Order in Council of 1895.

21445. It was not specifically touched, but was that underlying the essence of it?—I do not think that point arises in connection with the Order in Council. As a matter of fact, there were occasions, although they were rare, on which the Commander-in-Chief did attend the Cabinet, and there were other occasions, less rare, upon which he attended the meetings of the Defence Committee of the Cabinet.

See Q. 8948.

21446. The other main suggestion in Lord Wolseley's evidence was this. I quote it in his own words: "Make the Commander-in-Chief, as long as he is, as at the present moment, a non-political man, submit to Parliament every year over his own signature a certificate to say that he, on his own responsibility, certifies to the country that those three Army Corps are absolutely complete in every store that is requisite in order to mobilise them at the shortest possible notice, and the same thing as regards the two Army Corps being ready for active service abroad." What have you to say with regard to a certificate of that kind?—It strikes me as being rather a counsel of perfection; the certificate is to establish that the Army Corps are complete in every store and equipment—I think those were the words you used?

21447. Yes, and next day he submitted to us a rough draft of what he would propose as the certificate; I do not know whether you have seen that?—I think I did see it, but my answer to your question is that such a certificate to be of any real value would have to establish that the Army Corps were complete in every store and equipment that might be necessary for them, no matter in what part of the world they might be called upon to serve. That is one of our great difficulties; we do not know where our troops are likely to fight, and the tendency is for equipment of all kinds to be very highly specialised.

See Q. 9196.

21448. That is brought out in the draft certificate which Lord Wolseley submitted to us in these words: "This is to be signed once a year by the Commander-in-Chief of the Army; it is only a rough draft, but it gives the general indication of the lines upon which I think it ought to be done:—'I have the honour to report that the position as regards the forces which it has been decided we are to be prepared at all times to put into the field for service abroad or for home defence is as follows:—(1) The two Army Corps for service abroad are complete in personnel, equipment, and stores except as follows: First, any special equipment or stores required by the special conditions of the country in which they may have to operate. This cannot be provided until that country is known; secondly, there are the following deficiencies in the men and stores required, independent of the special equipment referred to above' (and then, of course, follows statement of them). 'These two Army Corps would be ready to embark as soon as the necessary sea transport could be provided for them, or so many days after the order to mobilise had been given.' Or, if that was not the case it should be stated. 'The three Army Corps for home defence are complete in personnel, equipment, and stores, except as follows' (then would follow the particulars as before). 'These three Army Corps would be ready to move to their appointed stations in (so many) days after the order to mobilise had been given.' To be signed by the Commander-in-Chief"—The passage in that draft certificate that strikes me most is that in which the Commander-in-Chief would make a reservation to the effect that the Army Corps was complete in all except the special equipment which might be required by the peculiar circumstances of the country in which the troops were to serve. Look what an enormous loophole that would leave. As I was on the point of saying, the tendency is to specialise equipment very highly indeed; you have different clothes, different wagons, different equipment of all sorts according to the country in which hostilities take place. Now, if the Commander-in-Chief's certificate left that loophole

it seems to me to follow that the certificate would not be of any very great value. You might find that you wanted your Army Corps for service in some country in which equipment of a highly specialised kind was required, and that equipment would not be forthcoming.

21449. But it would not be forthcoming under any system, would it?—Well, but does the Commander-in-Chief's certificate advance you beyond the point where you are now?

21450. I understand it would advance you in this respect, that the chance of deficiencies in stores, such as were brought out by Sir Henry Brackenbury in 1899, would be guarded against in that case?—I doubt whether it would really protect you. On the other hand, it seems to me to be too great a power to put into the hands of the Commander-in-Chief. You put him in the position of being at any moment able to refuse to sign this certificate, and thereby forcing the Secretary of State for War to go to Parliament with an admission that things are not as they should be. I think that would be likely to create very inconvenient relations between the Secretary of State and the Commander-in-Chief, and I should prefer to leave matters as they are.

21451. Then what is the position as they are? The Secretary of State makes his statement once a year, in which he takes upon himself practically to give the certificate which is proposed here, because he states to Parliament that the Army equipment is adequate?—I do not think you can divest the Secretary of State of his responsibility.

21452. That responsibility is on the Secretary of State now?—Yes, and all the certificates in the world will not relieve the Secretary of State of his final responsibility.

21453. That is distinctly the responsibility of the Secretary of State that he does give what amounts to a certificate each year in his statement on the Army Estimates?—I should say that there is an unwritten certificate to the effect that all has been done that can be done within the bounds of financial possibility.

21454. And at any rate, if anything turns up afterwards, it is the Secretary of State who is responsible for that omission?—If anyone has to be hung, it must be the Secretary of State.

21455. (*Lord Strathcona and Mount Royal.*) And this would be a certificate by the Commander-in-Chief that the Secretary of State was correct in making his statement; he would be an auditor really, in a sense?—There is just one other point about that certificate which I think is worth considering. Does not the idea of the certificate proceed upon the assumption that you can conceive finality in these questions of arms, equipment, and so on? Now my experience taught me that there was no such thing as finality, and that the equipment which was thought good one year was voted to be out of date the next year, and so on. Let me give you just one illustration of the kind of thing I mean; although we had not any large reserves of clothing, we had a very considerable quantity of it in store, and we were immensely proud of ourselves because we decentralised our so-called reserves of clothing. You had all these suits of khaki drill, or whatever the material was, bound up in nice little bundles at the depôts; the reservists were to come in, take down their bundles, and go away on board ship, and nothing could have been more admirable than this arrangement. At the very last moment my military advisers came to me and told me that the material was wrong, that they must have khaki serge, and all these elaborate precautions proved to have been more or less useless. We had to go to the trade under tremendous pressure to get this material made, with the result that there was delay and confusion.

21456. (*Chairman.*) Do you think that was one of the preparations which were in abeyance pending the money being voted?—No, it was really an after-thought that serge and not drill was the proper material.

21457. I know it came pretty late, but I think it was included in preparations?—I do not know the exact date, but my point is that it was a sudden change.

21458. (*Sir George Taubman-Goldie.*) I should like to ask a question upon that; a suggestion of that sort would come from the principal medical officer of the Army, no doubt, and we have it in evidence that it came from him?—It would come from him.

21459. Under the system of a permanent Army Board on which he sat, would not questions of that sort naturally come up for discussion during peace time?—There was an Army Board, and I do not see why this question should not have been brought before it; it did, in fact, come before it on the 31st August.

21460. Your Army Board, under the name Mobilisation Committee, only began to sit in June?—I have something to say about that presently.

21461. What I want to get at is this, that so far as we know there was no such Board permanently in existence beforehand?—There was the original Army Board, consisting of the four heads of Departments and the Commander-in-Chief, and there was nothing to prevent the Director-General of the Army Medical Department from going to anyone he pleased—for instance, he might have gone to the Director-General of Ordnance or to the Commander-in-Chief, and said to him: "Now for this climate in which we are going to fight we want serge instead of drill," and the question might then have been brought before the Army Board.

21462. There is rather a difference between a man doing that on his own initiative and a Board meeting round a table, and men bringing up suggestions to the Board from week to week?—Would your point not rather be that the Director-General of the Army Medical Department ought to have been a member of the Board?

21463. And that the Board should have met regularly during peace time; there are two suggestions?—The Board of which I speak did meet perhaps not regularly, in peace time. The Director-General of the Army Medical Department was not a member of it, however.

21464. We have it in evidence that the Army Board at present meets very seldom, practically only for the discussion of the Estimates, and I think that was perhaps so in the last year of your tenure of office?—I do not know how often they met. I do not know whether I ought not perhaps to qualify what I said a moment ago—the Army Board under the Order in Council had not the right of initiative, and therefore, strictly speaking, the Director-General of Ordnance might have conceived that he had no right to bring up any subject at the Army Board. On the other hand, of course, if a representation had been made to him by the Director-General of the Medical Department he could have come either to the Secretary of State or to the Commander-in-Chief with a proposal to refer the question to the Army Board, or he might have started a paper on the matter, which would have come to me.

21465. My only suggestion is that when men have the habit of meeting together regularly, they much more naturally take up topics, and topics much more naturally occur to them than might occur to an individual who is not in the habit of meeting his colleagues to discuss questions?—I entirely agree with you as to the advantage of frequent meetings.

21466. (Chairman.) There is just one other point you mention in your précis before we come to the Boards, about a statement by Sir Ralph Knox, that the authorised procedure was departed from; what do you say to that?—I do not know whether he gave you any particular instance. I know Sir Ralph Knox did rather resent the manner in which business was sometimes transacted directly between the high military officers and the Secretary of State. His reason no doubt was this, that according to the strict procedure, if an official proposal is put forward by one of the heads of Departments, the paper ought to go through the Permanent Under-Secretary, in order that it may be registered and not lost sight of, and there is an inconvenience when the head of a military Department takes a short cut and does business with the Secretary of State direct. I quite understand Sir Ralph Knox, as an old and experienced official chafing a little at the idea that direct communications went on.

21467. (Viscount Esher.) Verbally?—Verbally, yes. On the other hand, I think it would be most unfortunate if anything was done to prevent or discourage high military officials from going freely to the Secretary of State, and certainly in my time whenever those discussions—those personal communications—led to a result or to the formulation of a proposal, we always treated the proposal officially, and made an official paper of it, and got it back, so to speak, into the official groove. There may have been cases, and I believe there were sometimes, where the regular procedure was not followed as strictly as it might have been, and

the result, of course, was a certain amount of inconvenience.

21468. (Chairman.) Of course, as long as the minutes were recorded eventually, the Parliamentary Under-Secretary's position was perfectly secured?—Perfectly.

21469. (Sir George Taubman-Goldie.) In answer to Question 1323, Sir Ralph Knox said he always understood there could be no objection to verbal interviews, but he goes on to say, and I had better read the words: 27 Mar. 1903. "I do not know whether you know the location of the War Office, but the Commander-in-Chief has a room adjoining that of the Secretary of State practically, with a door into it, and they are in constant communication with one another, and of what verbally passes there is no record whatever; and so with regard to the other officers; say the Director-General of Ordnance would go into the Secretary of State's room, as a matter of course, and discuss many questions with him. That I always understood there could be no objection to; I mean if the Secretary of State wants to see any officer of his Department he sees him, but when the question takes the form of the *litera scripta*, whatever discussion may have taken place, there ought to be a written decision upon it, and that ought to be submitted through the Under-Secretary of State, I think, without question. It was constantly occurring that decisions were obtained direct by the heads of different Departments on their *ex parte* statement by the Secretary of State"—Without knowing what particular occasions he referred to, it is very difficult to answer that question; at any rate, I think he was right in principle as to the procedure. At the same time, it was a procedure that need not always be followed to the letter.

21470. May we not take it that it would be a serious disadvantage to the Secretary of State if he could not have conversation with the leading experts in the War Office without the necessity of having to record all that is said?—A serious misfortune, and I would even go further, and say that even communication by the *litera scripta*, so long as it was informal and confidential, was in many cases very desirable.

(After a short adjournment.)

21471. (Chairman.) (To the witness.) The remaining head of your evidence is with regard to the consultative bodies within the War Office. There were some changes introduced in respect to those in 1895?—That is so; when I took office I found that there were in existence—first, a War Office Meeting which used to be convened by the Secretary of State, and at which the heads of departments, military and civilian, were present; it met rarely, and, in fact, I do not think it is too much to say that at that time those meetings had almost fallen into desuetude. Besides that there were what were known as Adjutant-General's Meetings; they were meetings attended by the Adjutant-General and the three other great military heads. These meetings were not recognised by the constitution of the War Office, and I think they may be regarded as having, to some extent, grown up in consequence of the somewhat special condition of the War Office at that time, when the Duke of Cambridge was Commander-in-Chief. The Duke of Cambridge gave a great deal of attention to certain parts of the business, and not so much to others, and the Adjutant-General consequently acquired a position of special authority in the office. It was his habit to convene his military colleagues, and to confer with them as to various questions as they arose. I thought the arrangement a bad one, partly because it had no place in the constitution of the office. It was an irregular arrangement, because, when Lord Wolseley succeeded the Duke of Cambridge as Commander-in-Chief, it was quite clear that he would expect to have a voice in deliberations of that kind. I therefore regularised the matter by creating the Army Board, which consisted of the Commander-in-Chief and the four other military heads.

21472. That was what you called the Army Board under the 1895 organisation?—Yes; the original Army Board, we might call it, to distinguish it.

21473. Because that was not the Army Board of which we had the Minutes during the war?—No; that is a different body.

21474. It has been rather difficult to carry the nomenclature out, but the Army Board under the 1895 Order is the one you are now talking of?—I would call it, for the sake of convenience, the original Army Board; we constituted that Army Board and abolished the Adju-

27 Mar. 1903.

tant-General's Meetings, and we gave, under the Rules of Procedure which you have had before you, a recognised position to the War Office Council. With regard to the original Army Board, we restricted its functions to the consideration of the Estimates, to the consideration of promotions, and, thirdly, to the consideration of such matters as might be referred to it by the Secretary of State. Those were the changes made in 1895.

21475. You had besides that a War Office Council, had you not?—Yes; I think I mentioned that: the old War Office Meeting which had existed since Lord Cardwell's time was for the first time given a position in the constitution of the War Office.

21476. Under the presidency of the Secretary of State?—Under the presidency of the Secretary of State.

21477. But at that council all the subjects of discussion were arranged by the Secretary of State?—Yes; the Secretary of State's practice was to reserve for consideration by the War Office Council any questions with regard to which it seemed to him desirable that there should be deliberation and discussion. It met, not at regular intervals, but when it was convened by the Secretary of State, and there was usually an agenda with précis of the matters coming up for discussion. A note was taken by the Permanent Under-Secretary of State; the decision was reserved for the Secretary of State, who afterwards announced it.

21478. No individual member had any initiative?—No; but if any individual member desired to bring a matter before the War Office Council, he certainly would not have been denied the opportunity of doing so.

21479. He had to communicate privately with the Secretary of State, I suppose?—He would have come to me, and said, "It might be desirable that this matter, which concerns two or three different departments, should be debated at the War Office Council."

21480. And do you defend that position?—I think so; I think practically it left any one free to originate a discussion, if they desired to do so.

21481. You are aware that a Committee sat under Sir Clinton Dawkins, which examined into that matter, and they reported that there should be a board practically on the same lines, but the members of the board should be empowered to bring before it any important question affecting their department, and the board as a whole should consider and decide any proposal submitted to it, subject to the approval of the Secretary of State?—I see no objection to that.

21482. You see no objection; but I understood you to say, from your previous answer, that you thought the other arrangement a satisfactory one?—My suggestion was that, under the other arrangement, virtually there was no reason why any member should not bring forward a subject if he chose.

21483. You think the Secretary of State would never have exercised a veto at the preliminary stage, and prevented a member from bringing up a subject?—I do not think I should have exercised such a veto unless it had seemed to me that the subject had not yet arrived at the point where a general discussion was called for.

21484. Still, the other system preserves the independence of members rather more?—Yes; it has that advantage.

21485. There may be an argument for it on that ground?—I think so.

21486. And it has been adopted?—It has been adopted, I believe, both in the case of the War Office Council and the Army Board.

21487. At any rate, I am looking just now at the War Office Council; we had it from Sir Edward Ward that that had been adopted by the present Secretary of State?—I believe so.

21488. Then, with regard to the Army Board, the Army Board in the war was a different organisation, was it not, from what you have been describing?—The new Army Board, which is a convenient way of describing it, came into existence in this manner: There was already, as part of the machinery of the War Office, a Committee for Mobilisation, which was supposed to be assembled whenever there was war. The Committee consisted of 19 members, and it became apparent at the very outset that that body was not a well-composed body for the purpose of dealing expeditiously with the kind of points which

arose from day to day. I therefore substituted for it a Board comprising the old Army Board—that is the Board consisting of the Commander-in-Chief, the Adjutant-General, the Quartermaster-General, the Inspector-General of Fortifications, and the Director-General of Ordnance, with the addition of the Accountant-General and the Assistant Under-Secretary of State. I made those additions because I thought it extremely desirable that the soldiers should have, so to speak, in their pocket two members of the permanent civilian staff of the War Office, who would be able to tell them, the one about the back history of any question that might come up, and the other about its financial aspects. That body met constantly, and I believe you have seen its minutes. I have always thought that it did its work extremely well, and that it was a valuable addition to the machinery of the War Office at such a time.

21489. We had it, too, from, I think, both sides, that the civilian members whom you added to the Council took the part which you intended them to play—that they did not interfere with the military discussion of the matter, but gave their advice on the other branches of the subject?—Quite so; I think that really was a good illustration of what I have always regarded as the right mode of conducting business in the War Office, viz., that the soldiers and civilians should, as far as possible, sit side by side, and not occupy different branches of the office, and occupy their time in controversies with one another.

21490. At the same time, what I meant rather by my observation was that it did not interfere with the principle that the Army Board, as so constituted, could express the distinctively military opinion, while the War Office Council, with the Secretary of State at its head, was more representative of the whole War Office?—Quite so; the two civilians were present more as assessors, if I may say so.

21491. And, therefore, the Army Board, as so constituted, did represent the collective military opinion of the War Office?—Yes.

21492. And that you consider an advantage?—I do.

21493. Do you think that that still continues under the present system?—I can speak with much more knowledge of what the system was in my time than of what it is now.

21494. I am speaking now of the present system after the Order in Council of 1901, and, of course, I do not ask you to speak to that with any detailed knowledge, but I only ask you whether you think that still continues or whether you are of opinion that it should continue?—Is it not the case that the Army Board still exists, but with the addition of one or two more civilian members?

21495. We have had evidence to this effect, that the Army Board does still exist, but the principle being that the War Office Council now has regular weekly meetings, the Army Board has dropped into the background and only meets very occasionally, and principally for the consideration of the Estimates. And all that I wanted to get from you was that there being that difference between the War Office Council and the Army Board, the latter gives essentially the collective military opinion of the War Office; it is of great importance that that board should not drop into the background, but should meet on the same class of subjects as they dealt with during the war, and present to the War Office Council and the Secretary of State the collective opinion of the military members of the War Office?—Yes, it seems to me that that would be desirable. The question is, I suppose, whether the additional importance which has been given to the War Office Council, on which all the military heads of departments have a place, might not be considered as compensating for any diminution of authority in the Army Board.

21496. It seems to me, with all deference, that it is a matter of definition of duties, and that the history of the different boards in the War Office rather bears that out, but if the War Office Council took up matters which were not distinctively matters of military opinion, and the Army Board those which were distinctively of military opinion, there might be a line of division drawn?—Yes.

21497. Do you not think that would be a very desirable process in the organisation of the office?—Do I understand your suggestion to be that the military heads should be given an opportunity of formulating

their policy in consultation before that policy comes up for consideration in the War Office Council?

21498. On matters of purely distinctive military policy?—Yes, I do not disagree with that.

21499. You see we have had previously mentioned a representation from the late Commander-in-Chief that he ought as Commander-in-Chief to have the position of putting forward a military policy even before the Cabinet, and I am suggesting to you that in the War Office the collective opinion of the Army Board was proved in the war to be of very great utility when brought out by meetings of the Army Board?—Yes, and I see from a note that I have here that under the present constitution of the Army Board the board is free to consider any important subject which the Commander-in-Chief or the head of the military department may desire to bring forward for discussion. Therefore I take it that they have that opportunity now.

21500. They had the opportunity, but according to the evidence we had, I think, from the Commander-in-Chief himself, the Army Board very seldom meets?—That, I think, would be unfortunate.

21501. (Sir Frederick Darley.) Who would convene the Army Board?—The Commander-in-Chief.

21502. (Chairman.) What is your opinion generally with regard to the advantages of these boards?—I think the Commission will have gathered from what I have said that I attach great importance to the practice of consultations round a table between the soldiers and the civilians in the War Office. The soldiers are at a disadvantage in two respects; in the first place a good many of them, the men who come into the office and take up a five years' appointment, cannot know the back history of the questions that come up—it is impossible that they should—and it is of very great advantage to them to have by their side men who have passed years in the office, and who know what has taken place with regard to the different cases, who know what the difficulties are and whether there are pitfalls which have previously been discovered, and which it is desirable to avoid. Then very often, but certainly not always, the soldiers have not quite a sufficient appreciation of financial difficulties; I have known some soldiers who were excellent financiers; others are a little inclined to take the line of saying "It is our business to tell you what the Army wants, and it is your business to find the money." Then with regard to the value of these boards as a means of bringing the heads of departments together: I think there is a great deal to be said from that point of view in their favour. You have constantly in the War Office cases which concern not one department of the office, but more departments than one, and if each head goes his own gait and deals with the subject off his own bat, there obviously must be a great deal of confusion, a confusion that can be avoided if the heads of departments are brought together in consultation; therefore, upon the whole, I am strongly in favour of meetings of this kind. On the other hand, I sometimes think that people are inclined to run away with the idea that a board is a panacea for all Army troubles; there is a sort of idea that if you have a board of seven people the opinion of that board is seven times as valuable as the opinion of a single man; but, of course, I need not remind the Commission that the heads of the great military departments owe their position to the fact that they are experts in their own line. Their opinion as experts with regard to their own particular department is, of course, of first rate value, but it does not at all follow that you would get a better opinion, let us say, about a question of fortress armament from a board of five or six members than you will get from the one man who has made the question of fortress armament his special study.

21503. No, but on the other hand, if you want the general military opinion of the War Office, the mere fact that the heads of departments are experts in their own line would make the opinion of the board a more complete opinion than the opinion of each individually?—That would be true with regard to matters which, like many War Office matters, concern not one department but two or three.

21504. That is what I mean?—Yes.

21505. The last heading you gave us was about any measures taken between 1895 and 1899 for increasing the strength of the Army?—I thought it perhaps worth while to remind the Commission that during

those years something was done to increase the efficiency of the Army. I do not profess to give a complete catalogue, but I would say in the first place, that during our first two years the greater part of our time was taken up in fighting for the existence of a short service system. I daresay you will remember what a campaign was directed in Parliament and in the Press against that system. Lord Wolseley and I spent a good deal of our time in preparing the case for the defence, which I am glad to say we were able to maintain successfully. During the time when I was at the War Office, amongst other things, we increased the strength of the home battalions by 80 men per battalion; we very largely increased the field artillery (that is a point which has already been mentioned), and supplied it with a quick-firing gun; we rearmed the Army with a new rifle.

21506. (Chairman.) With the quick-firing gun?—Yes, there is great difference of opinion as to what is a quick-firing gun, but with a gun that in point of rapidity of fire was, I believe, as good as any gun at the time in use upon the Continent, and far better than any gun with which the artillery had yet been supplied.

21507. (Sir George Taubman-Goldie.) The 15-pounder?—Yes; we carried through a large scheme for re-arming our fortresses, superseding the obsolete muzzle-loaders, with which many of them were equipped; we added considerably to the barrack accommodation throughout the country; we purchased the great Salisbury Plain manœuvring ground; we passed a Bill for facilitating the holding of manœuvres; we also passed a Bill to which I have made reference already for the creation of a special service reserve for minor expeditions; we improved the pay of the soldier by putting an end to the grocery stoppage; we did a good deal towards supplying rifle ranges and increased reserves of ammunition; and, altogether, I am inclined to believe that Lord Wolseley was not far off the mark when he said in that minute of January, 1900, that the Army which we sent to South Africa was a better found and a better equipped Army than had ever been sent from these shores before.

21508. (Sir John Jackson.) Does a soldier now get his pay without any stoppages?—We did away with what was called the grocery stoppage; I think the effect of that was to add 3d. to the soldiers' pay, but that left certain other stoppages, and I think I am right in saying that under Mr. Brodrick's present scheme those have all disappeared, and the soldier's pay has been very considerably raised.

21509. (Chairman.) Is there any other point you wish to record?—I think not.

21510. There is one matter which I should like just to mention, and that is the question of the relations between the War Office and the Treasury; we have had a certain amount of evidence on the subject. Sir Evelyn Wood and Mr. Marzials both spoke to it, and, as I understood it, if a proposal involving expenditure is brought up by any Military Department of the War Office it goes to the finance side first to be discussed?—Yes.

21511. And then it is submitted to the Secretary of State?—It goes to the Finance Department, and then, if the Finance Department objects to it, or cuts it about, the Military Department concerned is given an opportunity of saying what it has to say in defence. I think that was a change introduced while I was at the War Office; the soldiers used to complain that their schemes were torn up by the financial critics, and that they had no more to say.

21512. So that they got a second hearing?—Yes.

21513. And then it goes to the Secretary of State?—Yes.

21514. And if he approves it then goes to the Treasury?—If he approves, and the proposal is one for a service for which Parliament has provided money, then the expenditure may go on at once.

21515. Without reference to the Treasury?—Without reference to the Treasury; but if no funds are available out of the particular subhead, then it has to go to the Treasury.

21516. That is any expenditure which has got to be met out of the provision for the year?—Yes. Then any larger proposals, involving a large outlay, would have to be dealt with either by a Supplementary Estimate or on the Estimate of the next financial year, and in

both those cases, of course, the Treasury has to be consulted.

21517. What we were told was that in that case the representative of the War Office in any discussion with the Treasury was the financial side of the War Office?—The inference being that the soldier had no opportunity of defending his own proposal?

21518. Exactly?—I do not think that is the case, but, of course, these points which are discussed between the Treasury and the War Office between Estimates, during the course of the year, as a rule are comparatively minor points, and I have never heard that the Treasury was unfair to the War Office; on the contrary, although their business is to criticise, I have never heard that their criticism was unfairly exercised.

21519. Or sums refused unfairly?—If they were so refused it would always be open to the Military Department to go to the Secretary of State and move him to take up the cudgels for that particular proposal.

21520. That is what I wanted to come to; that would be the next step?—Yes.

21521. And I suppose in the case of new expenditure affecting the Estimates of the next year, especially if it was of importance, that would always be the case; it would be for the Secretary of State to deal directly with these matters?—Yes; proposals of that kind would be considered by the Secretary of State with other proposals when the Estimates came up for his consideration, probably in the month of October or November, and then the final discussion would be between the Secretary of State and the Chancellor of the Exchequer; the two would probably try to arrive at an agreement as to the sum to be taken in the year's Estimates, and if the two could not agree there would be a reference to the Cabinet.

21522. And the final discussion would rest with the Cabinet?—That is so.

21523. I think it was suggested in one answer that the Treasury might, or the Chancellor of the Exchequer might, define a certain sum within which the War Office must keep their proposals, in which case there would have to be a discussion, I suppose, in the War Office itself as to the particular heads, and the way in which the particular heads might have to be cut down?—The first question that would have to be decided would be whether the Secretary of State would accept that particular sum; he might accept a decision from the Cabinet that the Estimate he had put in was to be reduced, and it might be left to him to decide how that reduction should be effected.

21524. He would generally put in an Estimate based upon separate provisions for the separate heads, would he?—Yes; in discussion with the Chancellor of the Exchequer and the Cabinet he would certainly be expected to explain how his total was divided among the different heads of expenditure.

21525. And if the decision was against him, and the sum total was cut down, would it rest with him to distribute it among the heads?—It might do so, because from the Chancellor of the Exchequer's point of view if he got the reduction it would not signify very much to him whether he got it at one point or another, but the Chancellor of the Exchequer or the Cabinet might indicate to the Secretary of State that in their opinion the War Office proposals with regard to certain Departments were justified, but that they were not equally justified in the case of another. In that case the reduction would have to be made, not over the whole surface of the Estimates, but upon the particular items which had not been accepted by the Secretary of State's colleagues.

21526. If they decided upon one particular point no doubt that would be so; if they decided on it generally it would rest with the War Office to distribute?—I am bound to say that in my experience the process of insisting upon a reduction *en bloc* has not been resorted to. I have always found the Chancellor of the Exchequer ready to discuss with me on their merits the particular details of the War Office proposals.

21527. If he took exception to one particular head, would the military member concerned in that particular head have any opportunity of representing the great importance, in his opinion, of the expenditure which had been proposed?—Certainly, because in all these discussions the Secretary of State is briefed by his military advisers; all these points are very technical

points, and it is absolutely necessary that he should be convinced by his military advisers and supplied by them with the most cogent arguments producible.

21528. And you would have consulted the particular military member on a matter of that kind?—Certainly, from the first; and if I found I could not get what I wanted from the Cabinet, I should go back to my military adviser and say, "I am very sorry you have asked for so much; all I can do for you is a smaller sum."

21529. Would not the opinion of the Army Board be very useful on a matter of that kind?—On some matters I think it would be.

21530. As giving a correlative importance to the various subheads?—Yes, but we really did get that, because the War Office Estimates were always discussed at my table in the presence of the military heads, and therefore I had a very fair opportunity of judging of the relative importance of the proposals.

21531. That is in the Council?—In the Council.

21532. But, of course, it is possible that the military opinion might be expressed more freely in the Army Board, where the Secretary of State was not present?—I never found that the soldiers were very diffident in expressing their opinion.

21533. Does that give a full description of the relations between the War Office and the Treasury?—I think that is all I can suggest on the subject.

21534. (*Viscount Esher.*) That lump sum proposal the Chairman has alluded to just now, in point of fact, was made by Lord Randolph Churchill at the time of his retirement?—Yes; he said, take off half a million.

21535. And do what you like with it?—Yes.

21536. And it was on the objection taken by the Secretary of State for War that Lord Randolph Churchill retired from office?—That is right.

21537. (*Chairman.*) Have you anything to say about the contract system?—I am afraid I can tell you very little about that; of course, as you know, a large number of the contracts are made locally by the Generals in the Districts. The larger contracts are made in the War Office. The military head of the Department is consulted, the Finance Department is consulted, and then, as you are aware, there is an official called the Director-General of Contracts, who deals with those questions, and they come for examination in the Financial Secretary's Department, who refers to the Secretary of State when necessary.

21538. In your experience, do you think it works for economy and also for efficiency as it has been worked in the War Office?—I think so.

21539. I am speaking now of the home system?—Yes; I have no reason to say the contrary.

21540. Of course, in the case of the war, the contracts out in South Africa were on a different footing?—They were all made locally, and about a great many of them we heard nothing until afterwards.

21541. You could not from the War Office exercise any control?—I think not; we had hardly any means of judging what the fair price for mules or wagons or things of that kind on the spot would be.

21542. And, at any rate, you are not in a position to speak of them in any way?—I am afraid not.

21543. There is only one other matter I should like to ask you a question about, and that is with regard to the Imperial Yeomanry; that, of course, was a new departure at the beginning of the war?—Quite new.

21544. The particular point I wanted to ask was that there seemed to be some impression that they did not receive quite the encouragement when they first offered their services that they were entitled to expect?—I do not think they can complain of any want of encouragement from me or from Mr. Wyndham, who was Under-Secretary of State. It was an audacious innovation, and we should not have made it if we had not been prepared to give it every encouragement in our power.

21545. Prior to the application of Lord Chesham and Lord Valentia, Colonel Lucas, in the early days of October, approached the War Office, but he had an answer, I understand, from General Borrett that there was no intention whatever of employing Yeomanry, and three weeks afterwards it was decided that the Yeomanry forces should be employed?—General Borrett was in a comparatively subordinate position in the War Office, and I do not think that upon a point of that kind

they ought to have regarded General Borrett's answer as final.

21546. And of course, at any rate, they were left very much, in the first instance, on their own resources?—That was rather the point of the experiment. These gentlemen who came forward gave us to understand that they had special opportunities of collecting men and horses, and even that they had the command of shipping to transport these newly-raised corps to South Africa. I rather jumped at the proposal, because, in the first place, our hands were very full at the time, and also because I was being constantly told that the War Office methods were so involved in red tape that nothing could ever be got through. I therefore thought it was an excellent opportunity of seeing what some of these gentlemen could do for themselves, and we, therefore, gave them a very free hand, but I think as time went on they became aware that they had a good deal to gain by the help of men who were older stagers than themselves, and it was given to them.

21547. They complained, I think, perhaps still more of not being put into an advantageous position by the military branches of the War Office; for instance, on the question of staff, and so on, and the War Office—I cannot put it more distinctly than I said at the beginning—did not show them as much encouragement as it might have done. This is the statement. I quoted it to Lord Wolseley in Question 9173: "I think the worst part of the organisation was that the regiments, or battalions, as they were called, of Imperial Yeomanry were not provided with an adequate staff. The staff that was proposed by the Imperial Yeomanry Committee was exactly the same as that told off to Regular regiments, and in almost every detail that staff was cut down by the then Adjutant-General of the Forces at home, so that no Yeomanry regiment went out to South Africa of the first lot with an adequate staff?"—Whose evidence was that?

21548. I put the question to Lord Wolseley; this was a statement made on behalf of the Imperial Yeomanry by Lord Valentia, and I was quoting it to Lord Wolseley. Lord Wolseley said, "I can give you no information about that, because I never was consulted." Then I said to him, "The next question I might also read: 'In what particulars was it cut down?'" and the answer was "There was no paymaster to the regiment; there was no paymaster-sergeant to the regiment; there was a quartermaster to the regiment, and no quartermaster-sergeant-major, and no quartermaster-sergeants to the respective squadrons, and the regiments were sent out in most cases entirely without transport." That was the evidence given to us by Lord Valentia, who is an officer, and Lord Wolseley said, "I think it is very likely. I have no doubt it is perfectly true?"—I have no recollection of that question being raised, except to this extent, that I think there was a question of providing a numerous staff for the Imperial Yeomanry on the assumption that it was going to be a large corps with an organisation of its own. I believe the idea of my military advisers was, on the contrary, that it would be better to break it up into small units, and to attach those units to other bodies of Regular troops, so that they would not want a large central staff. That is my general impression.

21549. What they are speaking of in the statements I have quoted is with regard to regimental staff?—With regard to the regimental staff, I see in the proceedings of the Army Board, No. 749, "The Military Secretary read to the Army Board a letter from Lord Valentia asking that special officers should be appointed to the special corps which are being raised in connection with the Imperial Yeomanry, for the purpose of selecting, approving, and training recruits, and the Board recorded its opinion that no Regular officers can be spared for this purpose, and recommend that the officers raising these special corps should endeavour to obtain suitable officers from the Reserve. Military Secretary to take action." I do not know whether that has anything to do with it.

21550. I did not wish to trouble you with the military details, but I take it from what you have just said, that you considered it as an experiment which it was worth while to make?—Yes, and there certainly was no intention on my part of in any way discouraging them.

21551. We know there have been criticisms which we need not go into just now, but taking it as a whole, do you think it was a successful experiment?—I think it was. I think we got some extremely valuable men in

that way. I am under the impression that towards the end we tapped an inferior stratum.

21552. But if it was a successful experiment you would not desire on the next emergency to treat it as an experiment again?—No, I would not.

21553. Then would it not be desirable in some way or another to formulate the experience gained, and have some procedure ready by which these additional forces could be raised rapidly and on some system?—I think so.

21554. Are you aware of anything of that sort being done?—No, but as to that you will probably be able to get evidence elsewhere.

21555. You think it is a matter which is deserving of attention?—Certainly, and I am under the impression that the present Secretary of State for War is making this question of the Auxiliary Forces his special study.

21556. (Lord Strathcona and Mount Royal.) In the first instance the arrangements for raising the Yeomanry proper were under the control of a committee formed of gentlemen from the counties including Lord Chesham. I think that was the case in the first instance, and the first body of Yeomanry sent out were raised in that way; but afterwards it was changed, and practically, I believe, it was Colonel Lucas and one or two others who arranged for the enlistment of the second contingent who were not at all equal to the first contingent. I think that has been represented to us?—I think that is what happened; the local sources of supply in different parts of the country had been pretty well exhausted, and an endeavour was then made to raise more in London and central places.

21557. And the control of raising the men of the second contingent did not rest with the same committee?—No, it was diminished in number.

21558. (Chairman.) Was not the difference between the first and the second contingents rather this—that the second contingent was sent out to South Africa very much more speedily, without the same training at home that the first contingent had?—I have no doubt that was so.

21559. (Viscount Esher.) When you referred a military proposal to your finance branch, did you allow the financial officers to express an opinion on the merits of the proposal apart from its financial aspect?—They might have done so sometimes.

21560. Was it customary?—It was not customary; it was irregular, and if my attention was ever called—I think it was once or twice—to cases in which the financial officer—who perhaps after all knew a good deal about it—took upon himself to criticise the purely military merits of the proposal, I should always have supported the military authority.

21561. You said a little time ago that a proposal had recently been made to make the Commander-in-Chief a member of the Cabinet; was that precisely what Lord Rosebery did propose?—I understood he was to be a member of the Cabinet, although not on the same footing as the other members of the Cabinet.

21562. The proposal was, I think, that Lord Kitchener should be Secretary of State; was that not the proposal?—Secretary of State, and to attend the Cabinet whenever military business was before it.

21563. But he was to be Secretary of State?—I believe so.

21564. In point of fact, the Duke of Wellington was the first subject, not a member of the Royal House, to hold the post of Commander-in-Chief; am I right?—I take it from you.

21565. That was on the death of the Duke of York in 1827. Now he was a member of the Cabinet, was he not, as Master-General of the Ordnance?—Yes.

21566. It was in that capacity that he was a member of the Cabinet. Then at Lord Liverpool's death, when Mr. Canning formed the Administration at the beginning of 1828, the Duke of Wellington, who did not approve of Mr. Canning's political opinions, resigned, and then for a good many months until the end of that year there was no Commander-in-Chief at all; is not that so?—I will take it from you.

21567. The whole trend since that time has been to dissociate the officer holding the office of Commander-in-Chief from politics; is not that so?—To dissociate him from the general politics of the country, yes.

21568. Do you think that that is an advantage or a disadvantage?—An advantage.

The Right Hon. the Marquis of Lansdowne, K.G., P.C., G.C.S.I., G.C.M.G., G.C.I.E.

*The Right
Hon. the
Marquis of
Lansdowne,
K.G., P.C.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.*

27 Mar. 1903.

21569. You think it is a distinct advantage?—Yes.

21570. Do you think it would be a retrograde step to re-introduce the practice or the custom under which the Commander-in-Chief were to become a politician?—I hold strongly that the more you can keep the Commander-in-Chief out of politics the better.

21571. You hold that in the interests of the Army generally?—Distinctly in the interests of the Army.

21572. Now, with regard to the certificate, which has been referred to, you think there would be an objection to the Commander-in-Chief giving a certificate to Parliament for, as I understood the reason, that it would complicate his relations with the Secretary of State. Was that your reason, or one of your reasons?—Yes, I mentioned that.

21573. Do you think the same objection would apply if that certificate were given to the Secretary of State? The point is a formal certificate, which could be produced if necessary by the Secretary of State?—I cannot get it out of my head that you would bring about an extremely difficult situation, and that, whenever the Secretary of State and the Commander-in-Chief happened to disagree, there would always be a chance that the Commander-in-Chief might turn round and say: "Very well, all I can say is I cannot give you your certificate, you must do without it."

21574. You think it would have weakened rather than strengthened your position between 1896 and 1899 if you had had to call upon the Commander-in-Chief for such a certificate every year?—Yes.

21575. You do not think it would have strengthened your hands?—I do not think so.

21576. The appointment of the Commander-in-Chief is for five years, is it not?—Yes.

21577. When was that change first made?—When Lord Wolseley was appointed in 1895.

21578. I suppose when that change was made it was contemplated that the office of Commander-in-Chief might be held—not necessarily—by the senior officer in the Army, or very nearly the senior officer in the Army in point of age?—I do not think there was any such restriction on the field of selection.

21579. Has it ever occurred to you that a great difficulty might arise if a younger officer were made Commander-in-Chief at the end of five years as to his subsequent employment?—That it would be difficult to dispose of the younger officer at the end of the five years?

21580. Yes?—I think there would be a certain difficulty, but I do not know that it would be a very formidable one.

21581. It would be rather difficult to employ an officer who had held the high office of Commander-in-Chief under someone who had acted previously as his subordinate?—Yes, it would be difficult to employ him immediately under the new Commander-in-Chief; I think it would be difficult, for example, to put him back into the position of Adjutant-General under the new Commander-in-Chief.

21582. (*Sir Frederick Darley.*) You are aware of the allocation of duty to the Quartermaster-General and the Adjutant-General of the Forces?—Yes.

21583. Was any objection to that raised during the time you were Secretary of State for War, more particularly with regard to the Quartermaster-General's duties?—I do not remember it.

21584. Have you seen Lord Roberts' evidence with respect to that?—No, but I have heard his views on the subject, and I think I know what they are.

21585. You are aware he does not approve of the present allocation of the duty?—He does not.

21586. Have you considered the matter at all?—I think I am hardly prepared to give you evidence upon that point.

21587. (*Lord Strathcona and Mount Royal.*) You do not think it would be within the limits of practical politics that the Commander-in-Chief should be a member of the Cabinet; he must nominally hold the political view of those who are in the Government for the moment?—I am against bringing him into the Cabinet.

21588. But I see that Lord Roberts, in replying to a question here, where the second proposal of Lord Wolseley was spoken to, that is, that he should have an opportunity of conveying his own feelings to the Cabinet on certain occasions, said, on being asked if he had an opinion: "I think he has now. If I had had any particularly strong opinion upon a question, and Mr. Brodrick did not share it, I should have asked him to put it before the Cabinet." What I understood from Lord Wolseley was that it was not that his view should be put before the Cabinet by the Minister, but that he himself should have an opportunity of personally putting it before them?—As a matter of fact, Lord Wolseley did on one or two occasions attend the Cabinet himself; for reasons which, I think, I have explained, I doubt whether the practice is one which in the interests of the Commander-in-Chief himself is attended with much advantage. With regard to his opportunities of laying written statements before the Cabinet, I think it would be universally admitted that any minute of the Commander-in-Chief's which he desired the Cabinet to see should be seen by the Cabinet. There are two points, whether he should go to the Cabinet himself or whether his minutes should go to the Cabinet. With regard to his going there himself, that has sometimes been done, but I do not think it is desirable that the practice should be much encouraged. With regard to the Commander-in-Chief's minutes going before the Cabinet, I should always have admitted that the Commander-in-Chief had the right to require the Secretary of State to lay before the Cabinet any document that he chose to put forward, and I did on many occasions lay before the Cabinet the actual document which the Commander-in-Chief had supplied.

21589. What I rather understood from Lord Wolseley was that with the military experience of the Commander-in-Chief he would be able to explain any minute or anything better than a civilian could be expected to do if he had the opportunity of being before the Cabinet?—I have no doubt that if the Commander-in-Chief intimated that it was his personal wish to attend the Cabinet, the Cabinet would always give him an opportunity of stating his case.

21590. There was one point with regard to guns, as to which the Commission had some evidence here some time back from the representative of one of the manufacturing companies. He thought it better that there should be a larger reserve of guns than there has been in the past, but on its being suggested to him that this might not be very desirable owing to the great improvements that are taking place in guns day after day, he said that it would be better to have greater facilities than there are at present for making on an emergency any type of gun that might be considered the best?—It seems to me that there is truth in both those propositions. And we did, in fact, not only increase the armament of the fortresses and increase the reserve of guns, but we also added to the manufacturing power of our own factories, and we also by giving large orders to Armstrong's and Vickers' encouraged them to increase their plant, so that they might on an emergency be able to turn out material more rapidly.

FIFTY-FOURTH DAY.

Friday, 1st May 1903.

PRESENT :

The Right Hon. the Earl of ELGIN AND KINCARDINE K.G., G.C.S.I., G.C.I.E. (*Chairman*).

The Right Hon. The Viscount ESHER, K.C.B., K.C.V.O.
 The Right Hon. The Lord STRATHCONA AND MOUNT
 ROYAL, G.C.M.G.
 The Right Hon. Sir GEORGE DASHWOOD TAUBMAN-
 GOLDIE, K.C.M.G.

Field Marshal Sir HENRY WYLIE NORMAN, G.C.V.
 G.C.M.G., C.I.E.
 The Hon. Sir FREDERICK MATTHEW DARLEY, G.C.M.G.
 Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.
 Sir JOHN JACKSON.

BERNARD H. HOLLAND, Esq. (*Secretary*).

The Right Hon. ST. JOHN BRODRICK, M.P., called and examined.

21591. (*Chairman*.) You became Secretary of State for War, I think, in 1900?—In November, 1900.

21592. But before that you also had had experience at the War Office?—I was Financial Secretary at the War Office from August, 1886, to August, 1892, and I was Under Secretary of State for War from July, 1895, to October, 1898, so that I had been nearly 10 years at the War Office before I became Secretary of State.

21593. So that while as Secretary of State you are acquainted with the latter portion of the War, you also from your other experience are acquainted with facts relating to the previous history of the War and before the War?—Yes. Of course I was away from the War Office for two very important years, that is to say, from a year before the War actually broke out and for the first year of the War. I was at the Foreign Office; but I was not then a member of the Cabinet—I had no responsibility.

21594. In the first place, we are anxious to ask you to give us your views with regard to the various Boards or Committees, whichever you please to call them, in the War Office itself?—You have, I think, had a very full explanation of what the functions of the various Boards have been in the past.

21595. We have got all the Orders in Council?—You have all the orders, and I think the different witnesses, from the evidence which was sent to me to look over, have practically told the Commission what functions these Boards have had. The change which I made when I came to the War Office in 1900, or which I carried out afterwards and set on foot, was to establish the War Office Council on a permanent basis. Up to that time it had met intermittently. It had taken up only such questions as the Secretary of State from time to time submitted to it; it had practically very little in the way of records; there was a record only of decisions, and no record of the opinions expressed. I thought it necessary to have a Council with much more extended powers in which each member should be able to bring up any subject that he desired, and that the opinions of individual officers should be registered and notes taken of them for future reference. Of course I reserved the power which the Secretary of State is bound constitutionally to reserve of his giving or not giving an opinion, and of his, if necessary, over-ruling on the part of the Government the opinion of others. But I saw great advantage in that working because it left no doubt, and it leaves no doubt at present, after a subject has been discussed, first of all, whether there has been any difference of military opinion in the matter, and, secondly, what the Secretary of State's reasons are if he disagrees with his colleagues. Then, having put the War Office Council on that footing, I also changed in one very important respect the constitution of the Army Board, or the functions of the Army Board. Up to that time the Army Board, as understood before the War, had only met to discuss such questions as the Secretary of State chose to submit to the Commander-in-Chief and his military colleagues for their opinions. I thought it very desirable those should be the freest possible expression of military opinion, and for that reason I laid it down that the Army Board would meet

when the Commander-in-Chief desired to discuss questions submitted to it by the Secretary of State or any other questions which might be brought before it by the members of the Army Board. And that is the present status of the Board. In saying that I ought perhaps to say that the Army Board, as used for mobilisation purposes during the War, is not in any way affected by what has taken place. I believe it will be imperative in the case of any war, to have a continuance of the work of the Army Board as it was carried on during the War.

21596. But not in peace time; you do not want continuous sittings of the Army Board in peace time?—I do not think it is so necessary. The real importance of the Army Board is to focus military opinions on certain points. My own feeling is that the military opinion could be much better focussed at the War Office Council. Perhaps, if it is not too lengthy, I might give the Commission an illustration or two of what I mean. There are two ways of looking at all Army matters. There is the Council of perfection which would make it necessary for a Commander-in-Chief and his subordinates to ask for an enormous expenditure on services which, ideally speaking, it would be desirable to have, but which in reference to the public purse and to the probabilities of a campaign you cannot expect to have. Take for instance this: we might have to fight in India, or in South Africa, or in Egypt, or in some other climate. It might be argued that the Commander-in-Chief was bound to ask for all the clothing which would be necessary for troops to operate in all those climates, and for all transport which would be necessary to mobilise in all those different countries. It is very difficult for a body of officers sitting under the Commander-in-Chief not to feel themselves bound to ask for the extreme amount. Secondly, there is also great difficulty in getting officers of high rank to express opinions discordant from each other and from the Commander-in-Chief. Military subordination is at the root of the whole of their thoughts and feelings. The Artilleryman (the Director-General of Ordnance) would not willingly interfere with a proposal made by the Inspector-General of Fortifications; the Adjutant-General would be chary of interfering with the business of the Quartermaster-General, and all of them would be chary, and, I think, are chary, of differing with the opinion of their own chief, the Commander-in-Chief. Now, at the War Office Council matters are conducted differently in the last two years. In the first place, all the subjects discussed are discussed face to face with the civilians; and the one thing to which I have chiefly directed effort since I have had the control of the War Office has been to prevent the discussion of questions between the two sides of the House, the soldiers and the civilians, as if we were two antagonistic bodies sitting constantly and keeping a check upon each other. And I believe that the only way to do that is to bring soldiers and civilians face to face in the earlier stages of a controversy. When I first came to the War Office, in 1886, there was hardly a Paper that came to me as Financial Secretary, which the Finance Branch had, not as I thought legitimately, found grounds to criticise and to reduce proposals made to them from the military side. That, I think was due to the feeling that, instead of all working

Sec Q. 4572.

for the common object, it was the business of the soldiers to ask for the extreme amount, in the hope that they might extract from the civilians a half or a third of it. All that, I think, is gone. And I think the War Office Council has been one of the greatest means of stopping it. Now I will take an instance which I see was brought before the Commission by General Kelly-Kenny. He stated, I think, to the Commission that I had over-ruled a proposal to employ retired soldiers or civilians on all the fatigue duties which are at present carried out by soldiers, and which he contended interfered with their training. That involved a very large cost, I think something very near half a million of money, and when we came to discuss it at the War Office Council there was a very considerable weakening of the military opinion upon it, when they came to consider that this £500,000, or whatever it was, and whether they would prefer, if they had £500,000, to spend it on that service or to use it on any one of the other services in which they felt themselves deficient. Then, again, I do not think it had been considered, as was pointed out, that only just before the War, a year before the War, an addition of 80 men had been made to each battalion, solely to enable, or largely to enable, the battalion to be stronger on parade, and to provide for the fatigue duties. And also it was pointed out that, however desirable, this was not an expenditure which any foreign army found it necessary to undertake. It had been felt better to have more men in training, say for 10 and 11 months of the year, and for the other months to be doing fatigues, than to have less men and to pay men from outside to come in and do the fatigues. I mention that as an illustration. I think that at the close of the discussion at the War Office Council, if I had taken a vote, I should have found more people against the proposal than for it. Whereas, if that was brought up at the Army Board, and all agreed in the first instance, one could hardly expect, out of the body of officers, any one of them to go back upon it or discuss *de novo*. That is an argument, I think, for keeping the subjects for discussion at the Army Board and at the War Office Council to some extent distinct.

Sec Q. 10332.

21597. You spoke of General Kelly-Kenny mentioning that you had over-ruled a proposal. I think it only fair to draw your attention to what Lord Roberts said on the same subject. He said: "I proposed not long ago to the Secretary of State that we should take the matter up, but it was found to come to a very large sum, and consequently made the Secretary of State hesitate to agree to it."—Yes, I remember that.

21598. I only meant that I suppose General Kelly-Kenny used the word "over-ruled" in a loose way. He did not mean that you summarily over-ruled it?—I only want rather to point out that in a case like that probably General Kelly-Kenny would have found, if he had looked at the votes, that military opinion would have been on my side; that it was not a case where I had simply over-ruled it.

21599. But besides focussing military opinion in the Army Board to which you see those objections, might not the Army Board undertake a certain proportion of the decision, up to a certain point, of military matters, and relieve the War Office Council of work in that manner?—I think what they would more fairly relieve would be the minute-writing between themselves, between the military departments and the civil departments. I think there are many points where a question comes up affecting several departments, where the Commander-in-Chief might very well call together the Army Board to discuss and thrash out the matter in perhaps an hour, which at present involves a great many discussions on paper. I do not know whether it would be of any interest to the Commission to have an indication of the subjects which are discussed at the War Office Council.

21600. Very much so. We had the minutes of the Army Board, of course, during the War, but we have not seen any minutes of the War Office Council. I do not know whether you keep them?—I could with great pleasure put them in.

21601. Perhaps you would let us see them?—Perhaps the Commission would like to have a list of the subjects discussed, which are only three pages, put in in full; but I will take any particular day. On the 23rd of April, 1902, we discussed the "Appointment to Staffs of General Officers Commanding Army Corps of representatives of

Auxiliary Forces"; that involves a number of Parliamentary and other considerations on which it is most necessary to have the civilians' opinion as well as the soldiers'. "Inspection of the various branches of the Regular and Auxiliary forces and provision of Staff for the purpose"; that is a question of principle whether they are to have an Inspector of Garrison Artillery and Field Artillery as well as of Cavalry, whether the Inspector-General of Cavalry should inspect Yeomanry, and so on. That is a question of principle that it was most necessary we should discuss together.

21602. (*Sir George Taubman Goldie*.) It is also a question of money too—finance?—Yes, very largely involving money, and very largely involving the consideration of how far the new staffs of the Army Corps could perform the same duties. Then came the question of the "Treatment of soldiers suffering from tubercular and other forms of incurable disease"; that involved the whole question of how several hundred soldiers should be treated who had been sent home from India or elsewhere; for some cases remain in our hospitals for several years, and that, of course, although largely a medical question, is also very largely a question of politics. Then again, "Furnishing quarters of quartermasters and riding masters at public expense"; that follows on the question of furnishing officers' quarters, and there again the question of finance came in. All those four subjects were discussed probably in an hour or an hour and a half. I do not think it was a waste of time of anybody there. Take another day, the 13th of May of the same year. We discussed the Militia Reserve and the circumstances under which the Militia Reserve should be raised; the question of whether there should be a King's medal for service in South Africa, the second medal which was given, and, if so, what should be the limit. Then we discussed the "repatriation of Boer prisoners," and "Graduated scale of pensions to officers on voluntary retirement," a most important subject of finance, and one in which really considerable change was made, it having been hitherto necessary for officers to remain up to the extreme age on half pay, however certain it was that they would not be re-employed again. We devised that day a fresh system. Then there was the subject of papers concerning more than one branch being referred to the permanent Executive Committee; that was to facilitate the other work, a thing that the War Office Council alone could do. All those subjects were things, I think, that must have come before both soldiers and civilians.

21603. (*Chairman*.) I venture entirely to agree, but the point put before us was that there were a great many small matters brought before the War Office Council which took up their time that might have been disposed of by the Army Board?—I should like to hear an instance of them. The instance given me was some question of dress and buttons brought up by the Commander-in-Chief.

21604. Yes?—I may say that, so far as the Secretary of State is concerned, I leave all those questions entirely in the hands of the military authorities. But that was the best illustration I could have wished for of the utility of the War Office Council. The Director-General of Ordnance, who is responsible for dress, on three separate occasions had brought before me his difficulties. A general pattern had been agreed to, and the moment the pattern had been agreed to in order to facilitate mobilisation, he had been asked to change the pattern for individual regiments, and for other reasons in half a dozen different instances. He appealed to me on the ground that it would cause not only great delay in mobilisation but great additional expense, and he was face to face with the Commander-in-Chief, his superior officer. I brought the matter before the War Office Council in order to bring a little general opinion to bear upon the subject, and I am bound to say it had the best possible effect. It was discussed for a very short time, and I have had no more proposals to change patterns since. I think all parties benefited. And I might add that, in order to facilitate free expression of opinion, I have instituted in the War Office Council a system which I believe prevails in the Governor General's Council in India, of asking opinions, beginning with the officer lowest in rank, so that the very freest expression of opinion takes place before the dread fiat of the Commander-in-Chief is given. I hope I may not be supposed to suggest that there is

any friction between officers of the Headquarter Staff ; but of course there is a certain special respect for the opinion of the Commander-in-Chief, in the case of a man like Lord Roberts who has such an unparalleled record.

21605. This does not quite conflict with the case I am endeavouring to put, that is, a case where there was difference of opinion between members of the Army Board, and which I should imagine must come before the War Office Council unless the Secretary of State decides it himself. But would you disagree that there are a whole class of questions, of which this might have been a type, which, if there had been disagreement, could be best disposed of—in fact, I think you said so—by military opinion, and not come to the War Office Council to take up their time at all?—There may be some, and I should be only too glad to be rid of them. But, after all, the War Office Council sits only once a week ; it usually sits for an hour to an hour and a half ; it generally discusses subjects of importance which all those connected with the War Office are concerned with. When I tell you that 40 or 50 papers go through my office a day, one would hardly say that that was an undue time to be occupied by discussion by all the heads of the office on questions mainly of principle. But I agree it should be carefully watched, and that as much preliminary work should be got through as possible before it comes to the Council.

21606. It must be a relief to the Council and the Secretary of State if such a thing can be done, so far as it can be done with efficiency?—I quite agree.

21607. But at present is there any distinct definition of business of that character which the Army Board would be authorised to decide without reference?—I cannot say there is. The Army Board has rather fallen into, I will not say disuse ; it has met twelve times since October, 1901 ; but that is entirely at the option of the Commander-in-Chief. I have referred nothing to the Army Board. The Commander-in-Chief has the power to call them together, or any member can ask for an Army Board, but he has not done it.

21608. But the view that the Commander-in-Chief put before us as the reason he did not call the Army Board together was that the subjects were taken up by the War Office Council. My suggestion is that if there was a clear definition of duties between the two Boards, that reason would fail?—I think that is a point which might be considered ; but I think the only instance that the Commander-in-Chief gave of subjects which had been seized by the War Office Council, which might have been more for the Army Board, were the Estimates of the present year.

21609. He did mention that?—That is a very special case. We had had a great programme the year before in which a new scheme altogether for the organisation of the Army had been undertaken, and we had this year to consider how to reduce the Estimates from 90 millions of war expenditure, to something like 30 millions, and a certain number of questions with regard to the Estimates were dependent on the decision as to what number of troops should be kept in South Africa, which was not arrived at until Mr. Chamberlain personally conferred with Lord Milner and General Lyttelton out there ; consequently the time for arranging the Estimates was very limited, and, speaking generally, I had to lay it down that this year we should not take up, after the great programme of last year, any considerable fresh services, that we should have to lie on our oars and reduce our Estimates and see how we stood. I hope that another year the Army Board will go carefully into the Estimates in October and November.

21610. That is their specific duty, I think?—Yes, You have, I think, the order establishing the Army Board?

21611. Yes, I think so. With regard to the position of members on the War Office Council, there has been some question before us as to the initiative of each individual member. Perhaps you will state what their position is?—Each individual member of the War Office Council has full power to bring any subject before it. The wording of the order was quite, I think, understood by all except one officer. The wording is quite clear:—"The Council will discuss such matters as may be referred to it by the Secretary of State, and any question brought before it by individual members ;" and then it says, "In order that a question may be prepared, a

notice of the matter for discussion, together with the office papers on the subject should reach the Secretary not later than Wednesday morning." General Brackenbury, who gave that evidence, and who very rarely fails in such matters, happened to be away at the time the Order was issued, and before he gave evidence before the Commission he was not aware of the fact of the Order. And I think General Kelly-Kenny has a little misapprehended it. But I know it was fully understood by the other members of the Council. As a matter of courtesy most of them who have asked to have a thing discussed, have done so through me, but they would be perfectly in order in putting a matter down for discussion by simply sending it to the Permanent Under Secretary. I think, as a matter of courtesy, it is desirable to put to the Secretary of State, "I should like this discussed at the War Office Council." One of my colleagues did so only yesterday, on a very important matter which I thought was decided and all agreed upon ; and I have ordered it for discussion next Monday.

21612. I mentioned the matter partly on account of General Brackenbury's case that you have just mentioned, because he did give that evidence, but he has since written to say that he did not see the Memorandum concerning it, being away in bad health, and that he quite appreciates it now. But that was the impression left upon our mind by his evidence, and that of General Kelly-Kenny, and perhaps one or two others, that though the rule might be so, it was not understood by the members?—Well, not only did I put it in the Order of October, 1901, but I stated it at the Council. I think perhaps it has hardly been appreciated how very much more regular this Council has become than it was before.

21613. And that rule has been acted upon, you say?—Yes.

21614. (*Lord Strathcona and Mount Royal.*) In cases of much importance or urgency, can anything be brought up without previous notice having been given in advance of the meeting?—Yes. Of course, generally matters are only discussed when a *précis* has been sent round ; but the Quartermaster-General a few meetings ago brought up a very important question which he thought immediate, and it was discussed on the spur of the moment.

21615. (*Chairman.*) Is it your practice to refer to the War Office Council any questions in which you differ from or overrule the military authorities?—I very much prefer getting the opinion of the War Office Council on a matter, if there are such matters, on which I found myself in direct variance with the military authorities, but I find it very difficult to recall such questions. I can only remember one on two occasions at the War Office Council where I have not been able to accept the view of the majority of the Council. You might possibly count the question of the fatigues, but I can only remember one on two occasions.

21616. My attention is called to the evidence given by Sir Charles Mansfield Clarke at No. 2457, when he was asked by Lord Esher about this matter of raising questions, "What would happen if you did raise it?" (this is on the question of military clerks) "Supposing you raised it next Monday, what would happen? Would you be precluded from going on discussing it? (A.) Well, it could not be raised unless notice had been given of it and the paper had been sent round ; that is the procedure of the War Office Council, the agenda are sent round on the previous Saturday, as a rule, with a *précis* of each subject that is to be discussed on the agenda. (*Chairman.*) And if you put this subject on the agenda next Saturday, would it not come up? (A.) I do not think so, because a decision has been given about it. The agenda are prepared by the Secretary to the Council." His view evidently was that he could not have raised the point?—It would be unusual in the War Office, after a decision of the Secretary of State has been given on a formal paper, to say, "I should like to have a fresh discussion of this matter," but I am not prepared to say that it would not be done. If any member asked for it I should certainly accede. This was a question, I think, with regard to military clerks.

21617. Yes.?—There were months that this subject was under discussion, when anybody might have asked to have it discussed at the War Office Council. But nobody did. In fact, it was a subject on which I had

The Right Hon. St. John Brodrick, M.P.

See Q. 1821

The Right
Hon. St. John
Brodrick,
M.P.
May 1903.

been pressed for many years, both in the War Office and in Parliament, to substitute military clerks for civilians, and it was only when the change was found to be imminent that the minds of some military authorities misgave them about the advantage of losing their civilian clerks.

21618. (*Viscount Esher.*) Do you recall any case where a question has been raised without notice?—Yes. The Quartermaster-General raised a question, I cannot tell you what, but it was about two meetings before Sir Charles Mansfield Clarke himself left.

21619. Did you stop it or let it go on?—He thought it was immediate, and he said he would be very glad if we could discuss it.

21620. And you allowed it to go on?—We did discuss it, and resolved it according to his desire.

21621. (*Sir George Taubman-Goldie.*) That is quite lately?—Yes, he went to Malta at the end of the year, and it was about a fortnight or three weeks before.

21622. (*Chairman.*) He gave his evidence on the 23rd of October, 1902?—Yes; but I never heard of the evidence at the time. I never saw it until two days ago.

21623. As you have mentioned that subject of military clerks, would you like to say anything more about it?—I think myself that the change is a very useful one. I do not think it would be possible to extend it, nor would it be desirable on the civilian and financial side of the War Office; I think we have an admirably trained civilian financial staff. But I do think that, especially in the Military Secretary's Office, it seemed to be an anomaly that when the Military Secretary and the Assistant-Military Secretary happened to be engaged or not in the office, an officer, possibly of very high rank, had to come and see a civilian, a gentleman no doubt of distinction in the civilian service, but who was not in any respect his superior in rank, on his own personal and private prospects in the service. I know civilians manage that sort of business most admirably and without friction. At the same time it seemed to me more natural, when you have a number of retired officers of military experience wanting employment, and not knowing what to do, and admirably calculated for that sort of work, that they should be used as assistants in the Military division rather than civilians, who might not happen to be equally equipped with regard to military questions. The Military Staff clerks are an admirable body, and I believe when the system gets into thorough working order there will be no complaint whatever. I gave orders that in every case civilians should remain in the Departments so long as was necessary to train the new military clerks, and, in fact, as long as was desired by their military chiefs; but I think the system must be considered to be confined to the military side of the War Office, partly because it is almost impossible to give a non-commissioned officer the financial and critical work to criticise or to bring before his chief the criticism of a general officer on finance and audit.

21624. I think Sir Charles Mansfield Clarke certainly was under the impression that he was obliged to substitute military clerks throughout. It is military clerks rather than military subordinates he was speaking of, because what he brought before us was that five of his sub-divisions could well be worked by military clerks, but not two particular ones, and yet he had been obliged to make a second representation on that subject, and, so far as we understood him, had appealed without success?—I may say that whatever his difficulty was, he settled it with the Permanent Under Secretary, and he never appealed to me, and I heard through his evidence for the first time that he was dissatisfied about it; so I assume that since October the thing has been settled smoothly.

21625. And it is not the case that military clerks are to be substituted *en masse* for civilian clerks in the War Office?—No, I never thought of proceeding as far as that.

21626. Is there any other point with regard to the War Office Council that you wish to mention?—I think not, except to say generally that there has been much criticism of the institution of Boards and Councils; but I believe that the only way of avoiding excessive minute writing and long deliberations and squabbles on paper is that men should meet together and discuss the thing, quite apart from Boards or Councils. I have endeavoured to lay it down, and shall press as much as I can, that officials should meet each other in each other's rooms and agree upon a decision, which can be done very often in ten

minutes, instead of sending papers to and fro half-a-dozen times to arrive at it.

21627. I think that the next point that you wish to draw our attention to is the position of the Commander-in-Chief?—I have had the advantage of reading the suggestions made by Lord Roberts and by Lord Wolseley with regard to the position of the Commander-in-Chief. I think the Commission will probably realise that the position of the Commander-in-Chief has been very much altered by what has taken place since 1900. In the first place, his power of discussing matters and putting them on record both at the Army Board and the War Office Council has been clearly defined. It would be no longer possible for any Secretary of State to say without clear evidence, "I have military opinion with me on that subject." The whole matter is now in black and white. Then an alteration of the Defence Committee, which I must perhaps treat as a separate question, as I understood I should be asked about it, has put the Commander-in-Chief into a most important position, in immediate touch with leading members of the Cabinet, and at first hand sitting and directing to a large extent policy in the preparation of schemes and arrangements of strategical moves; I think that in that respect his position has changed very much since the time of which Lord Wolseley was speaking. Lord Wolseley's proposal, as I gather it, to the Commission, was that the Commander-in-Chief should go back to the position, in which he was before 1895. I think Lord Wolseley used the expression that he should have "full control of all his staff officers." Well, my desire would always be to see the Commander-in-Chief in as strong a position, and with as large powers, as it is possible to give to any one man who is filling that position; but my experience at the War Office is that in practice the Commander-in-Chief was in the past vastly overloaded with work. At this moment even under the reduced powers of the Order in Council of 1895, as modified by the Order in Council of 1901, the Commander-in-Chief has a vast correspondence, an enormous number of papers of necessity come to him; he has got the whole of the appointments through the Military Secretary; he has got a great many points of discipline which must come to him through the Adjutant-General which have been again put upon him by the wish of the Commander-in-Chief and by the feeling of the Army; he has got to deal with the Estimates for two months in the year, and with all important questions which arise in connection with the Estimates throughout the year; he has now got the work of the Defence Committee, which at present is meeting one day a week for several hours, and besides that he is responsible for all the schemes of offence and defence and the preparations for mobilisation which are brought before him by the Director-General of Mobilisation and Military Intelligence; and beyond that, again, he has now got the new Director-General of Military education and training of the troops who comes to him. The mere dealing with that number of men and that number of subjects must exhaust the time and energy of any man. I served with three Commanders-in-Chief; the Duke of Cambridge worked with the utmost diligence at a great number of subjects; Lord Wolseley was a very active man in all the early years I was his colleague; Lord Roberts begins work at a very early hour in the morning, and I believe has done two or three hours' work before most men have breakfasted, and he gives the whole day—he gives an attendance in the War Office which is unusual even in the other high officials; he is there a great number of hours every day. I think those subjects are in themselves probably as much as any man can deal with, and I think the evidence given by Lord Wolseley itself must have brought that before the Commission. I saw that a great many questions were addressed to him as to the schemes of offence and defence. Well, I thought there were indications that the Commander-in-Chief with all his other varied duties could not give the full time to those which would be given in a foreign army by an officer who spends his whole time on the subject. Take the question of Ladysmith, if I may give an illustration. Two things were made clear. First of all was one that was within my own knowledge because I was at the Council at which the question was settled, of where troops were to be posted in Natal when they were first sent in the year 1897, I think. Lord Wolseley then gave an opinion that they were to be posted at Ladysmith in order to occupy a position (Laing's Nek, I think) in case of war. Then later on it transpired that a force was sent there, and Sir

Q. 2442.

George White was sent in command of it in 1899, but that no scheme had been drawn out as to what was to happen in the various contingencies, nothing which a commander in the field could lay his hand upon and say, "If that happens I know what is going to be done." Now it seems to me that the first object of the Mobilisation and Intelligence Department is to supply that, if one might use a civilian term, *prima facie* course, to have it ready—it being clearly understood, as was pointed out by Lord Wolseley, that the Commander on the spot would have power to modify and change it and use his own experience. That evidence struck me very much because it made it clear to me that we ought not to burden the Commander-in-Chief unduly so long as he is responsible for that work. If you had a Chief of the Staff, which I do not suggest, if you divorced all these subjects from the work of the Commander-in-Chief, which I do not in the least suggest, then no doubt you could give the Commander-in-Chief further responsibilities. But if you are to hold him responsible in an Empire like this, at all events if war is on the point of breaking out, or, in the case of a small expedition like we sent to Somaliland, to consider the whole plan and advise the Government on all the various contingencies that may arise, you must free his hands from routine work to as great an extent as you can; and for that reason I should deprecate putting under the Commander-in-Chief again the control of the Director-General of Ordnance, the Inspector-General of Fortifications, and the Quartermaster-General.

21628. But you would keep under him the Director-General of Military Intelligence?—Yes. I should certainly keep him under the Commander-in-Chief. I feel that the Commander-in-Chief must be master of that even if you have to take other functions from him. I feel that that work is so bound up with the work of the Commander-in-Chief that you must put the highest official and the best man you can under him. You may take off all the routine work, but I think the Commander-in-Chief's word must be the last word.

21629. You have altered the position of the Director of the Military Intelligence, and he is now one of the Heads of Departments, a member of the War Office Council, and so on?—Yes, his position is entirely different from what it was, and his inclusion in the Defence Committee, of course, makes his position one of the most responsible in the Army.

21630. I was first going to ask does not his inclusion in the Defence Committee make any difficulty in regard to his subordination to the Commander-in-Chief?—I have not found it so. I think it would be a very difficult thing if the two officers sat side by side and if one were separate from the other; I think we should get different advice.

21631. (Sir George Taubman-Goldie.) Supposing that happened to-day?—The difficulty of having subordination, and at the same time equality, is no doubt great; but the same exists in the Cabinet as between an ordinary member of the Cabinet and the Prime Minister.

21632. But they are not soldiers?—No, but they have a proper sense of subordination, I hope.

21633. They may have a proper but not an improper sense—

21634. (Chairman.) Anyhow, that is a matter which you have deliberately decided ought to remain on the present footing, that the Director of Military Intelligence remains as one of the staff of the Commander-in-Chief?—I think there is no doubt it must be so, unless you change the functions of the Commander-in-Chief altogether; make him an inspecting officer and a mere commanding officer of troops; in which case you will make another officer who is far more important than the Commander-in-Chief; and that I should deprecate because the sentiment of the Army is, and always has been, to look to a Commander-in-Chief, and by no process will you ever get the Secretary of State for War to be looked upon by the Army in the same light as the First Lord of the Admiralty is looked upon by the Navy.

21635. And the result of that change that you have just described, would be to make the Secretary of State practically the executive head of the Army?—It would be so, and I think that is to be deprecated. I think the responsibilities of the Secretary of State are already sufficiently onerous, and I should deprecate adding anything to his responsibilities unless you can

add to his authority, which I do not think you can do with the Army.

21636. (Lord Strathcona and Mount Royal.) He would be the War Minister in that case—the Secretary of State?—Yes.

21637. (Chairman.) Of course Lord Wolseley's proposition came round in the end to the appointment of a War Minister, but I imagine that there also you would disagree with him?—I think it is a very attractive thing to suggest, making a soldier War Minister, but as has been pointed out since the proposal was made by Lord Rosebery, your difficulty is that you must at the same time make him a member of the Cabinet, and, therefore, make him a politician. You cannot make him a member of successive Cabinets, you cannot appoint him a member of the Cabinet *ad hoc*. And I very much doubt whether it is not better to make the Secretary of State and the Government responsible for policy, and to keep, so far as possible, military advisers outside the realm of that responsibility.

21638. (Sir John Jackson.) It would be rather awkward too if you had a Commander-in-Chief in a position like that in the Cabinet of different politics to the Government of the day?—It would be impossible. He must be responsible for the other measures introduced by the Government, and then what would you have? Take what has occurred in the last three months. There have been very vigorous criticisms of the policy adopted by the Government and the Secretary of State in regard to the Army. Well, that undoubtedly would bring the Commander-in-Chief's name a great deal more into the arena of criticism than is desirable for a man who is commanding, and whose authority is to be accepted in matters of discipline by the Army.

21639. (Lord Strathcona and Mount Royal.) He would be the one Member of the Cabinet not going out with a change of Ministry?—That, of course, would be an innovation in our constitution that is almost impossible to conceive.

21640. (Sir John Jackson.) And if that were the custom it would prevent your always having the ablest man as Military Commander-in-Chief?—That is another difficulty, of course. If you take your ablest soldier and make him Secretary of State for War you must have a Commander-in-Chief who is not your ablest soldier, and the division of functions would, I think, lead to the most certain friction.

21641. But if you had your ablest soldier made Secretary of State for War you could only make him Secretary of State for War if in politics he was on the same side as the Government. You could not put a man of Liberal politics, although he was the best soldier, as a member of a Conservative Ministry, could you?—No, he must be dependent on his colleagues for the acceptance of his estimates and all other matters, and his opinion would be required in the Cabinet on other occasions.

(Chairman.) That is what Sir John means.

21642. (Sir John Jackson.) But still he would have to give his vote on general questions of the Cabinet?—The only similar arrangement I can call to mind would be the arrangement by which, I believe in the German Reichstag, the Minister attends and explains his policy, although he is not a member of the Assembly. The essence of Cabinet government is collective responsibility for all that takes place, and you would break that in the most serious way by introducing a military member who would not take responsibility for what was done by his colleagues, whereas his colleagues must take responsibility for what is done by him.

21643. (Chairman.) And besides that, of course, in Germany the Emperor is Commander-in-Chief?—Yes, the Emperor is Commander-in-Chief, undoubtedly.

21644. (Sir Frederick Darley.) Besides which it does not follow that you would get the ablest soldier into the Government. It might be that all the ablest soldiers belonged to the other side of the House, and you might get a man who did not stand in the first rank as Commander-in-Chief?—It might be so, but I think you will find, if you go into it, that you must do one of two things: you must either make the Secretary of State (whether he is a soldier or not) responsible for all matters connected with the Army, in which case, if he is a soldier

The Right

1 May 1900

The Right Hon. St. John Brodrick, M.P.
May 1903. you must make the Commander-in-Chief a comparatively very small man, or you must leave matters very much as they are now.

21645. (*Viscount Esher.*) But as the ablest soldier has been mentioned, do you assume that you will always get the ablest soldier to be Commander-in-Chief?—The Government of the day would naturally pick the best man that they could. We know that in 1895 one Government was succeeded by another, and they took different views as to the ablest man for the purpose; but so long as the appointment is kept as a five years' appointment, which I think is imperative, though with power to prolong at the end of five years, you ought to have presumably the best soldier of the day.

21646. Irrespective of seniority?—I think in any case you would require to take one of the highest soldiers of the Army, but, as the Commission knows, in 1895 it was proposed to make a general Commander-in-Chief, although two field-marschals existed who have both since been Commander-in-Chief.

21647. (*Chairman.*) But seniority would be quite a proper matter to take into consideration in the appointment?—Certainly, relative seniority. I do not think it would be reasonable to take as Commander-in-Chief a young Major-General, though it might be done, but amongst senior officers I can hardly doubt that any Government would feel themselves justified in going down even to the rank of Lieutenant-General.

21648. (*Viscount Esher.*) You might get a man, at any rate, in the prime of life rather than at the end of his career, might you not?—I think that certainly is so, and would have been so if it had not been that the appointment previous to 1895 was an unlimited one, and that so long as the Duke of Cambridge discharged the duties as he did, with the utmost assiduity and tact and knowledge, there was no reason for change in the appointment. But that is why the question put by Lord Esher exactly realises my view, which is that a five years' appointment has also the advantage of allowing a man to retire without the smallest slight when you may have a man in the prime of life to come forward. I think it would have been very much to the advantage of the Army, not if the Duke of Cambridge had gone earlier, because even to the last day his work was admirably done, so far as I could see, but if Lord Roberts and Lord Wolseley had been able to take the post, say, ten years earlier, or when they could have perhaps worked on for longer, and it might have been possible to extend their time, and so forth. In the case of Lord Wolseley, he was not appointed until he was 62 years of age, and Lord Roberts was not appointed until he was 68, which, of course, is late.

21649. Then you do not see any objection to extend the appointment?—Not at all. I think that if the Commander-in-Chief was obviously the best man for the post, his term should be extended.

21650. You have not yet been face to face with the difficulty of a man retiring from the Commandership-in-Chief in the prime of life?—I certainly should be highly against that. If a Commander-in-Chief were put in between the ages of 50, and 55 and he was equally efficient and obviously a man who possessed the confidence of the Army and the Government, I should reappoint him at once for two years or five years, and even again if necessary.

21651. (*Lord Strathcona and Mount Royal.*) That would apply to all high military appointments, would it not?—Certainly.

21652. (*Viscount Esher.*) Does it apply?—Certainly. Sir Redvers Buller was re-appointed Adjutant-General for two years. In the Colonial Governments of Malta and Gibraltar officers have been repeatedly asked to stay on for a year or two.

21653. But for as long as another five years?—I think not, because usually there is some promotion you want to give a man. The Commander-in-Chief in India is a case in point. Lord Roberts was there seven and a half years; he was renewed for two and a half years.

21654. (*Sir John Jackson.*) Would it be absolutely necessary for a Commander-in-Chief, on retiring from the position of Commander-in-Chief, to retire from the Army?—No question has yet arisen of re-employing an officer who had been Commander-in-Chief, but in all those matters a great change has taken place in the last few years, though it does not affect the Commander-in-Chief.

For instance, it used to be considered that an officer did nothing except go to Gibraltar or Malta if he had been Adjutant-General. Sir Redvers Buller, who had been Adjutant-General, went to command at Aldershot, and Sir Evelyn Wood, who had commanded at Aldershot went to the War Office as Adjutant-General. Sir George White became Quartermaster-General after being Commander-in-Chief in India. Other officers have been Quartermaster-Generals and have gone out to similar appointments, and so on.

21655. But you have not had a Commander-in-Chief taking a subordinate appointment after his term?—No; I do not know whether it would be possible, but I think it is quite possible that the Commander-in-Chief might become Governor of Malta or Gibraltar after he retired.

21656. Take the case of the Navy: you have members of the Board of Admiralty who take up commands after retiring from the Board of Admiralty.—Does the first Sea Lord?

21657. (*Sir John Hopkins.*) Very seldom; there have been some instances in the old days, but I do not think of late years. I think a man finishes there as a rule?—I can quite conceive a position in which the Commander-in-Chief might have to take command of an army in the field, in which case somebody else would have to be appointed Commander-in-Chief at home.

21658. (*Lord Strathcona and Mount Royal.*) In existing circumstances would the Commander-in-Chief be afforded an opportunity of bringing his views before the Cabinet personally if he desired to do so, or must it be done through the Secretary of State?—The Commander-in-Chief, since I became Secretary of State, repeatedly attended the old Defence Committee, which discussed the Estimates, and had an opportunity of bringing his views before five of the principal members of the Cabinet. Since that Defence Committee has been superseded by the New Defence Committee, as the Commission knows, he sits upon it. If he were to ask to be heard on a particular point by the Cabinet, there can be no question that he would be invited to attend and explain his views. As a rule I think that the Secretary of State can generally make, if he is in accordance with him, as good a fight for him as he can make for himself, but I should certainly favour, and on any important point I should ask, that before the Cabinet over-ruled a strong opinion of the Commander-in-Chief, he should be heard by the Cabinet. Such a question did seem likely to arise about a year and a half ago—perhaps I had better not give the actual facts. As it happened I did not agree with Lord Roberts on a particular point, but I did propose that if it came to a question of our diverging in opinion, he should be heard before the Cabinet, which I knew had a strong opinion in the same direction as my own, and explain his views before any decision was taken. As a matter of fact, the matter passed over, and was adjusted entirely to Lord Roberts's satisfaction.

21659. (*Chairman.*) But the Commander-in-Chief in past years has been heard by the Cabinet, I think. Was not Lord Wolseley heard?—Lord Wolseley was heard by the Cabinet on two or three occasions. I can recollect occasions on which, when I was Under Secretary, he was heard; he mentioned them, I think.

21660. Before the Egyptian War?—Before the Egyptian War.

21661. But so far as I recollect he was not heard before the South African War?—I think not. I think the evidence went to show that he was not. I was not a member of the Cabinet at the time.

21662. You would presume it was because he did not distinctly ask to be heard?—If I had representations made to me as strong as were made by Lord Wolseley at that time I should certainly ask the Cabinet to hear the Commander-in-Chief in order that we might be certain that any effect which might be produced by the Commander-in-Chief's personal advocacy of his cause should be produced.

21663. And that, you think, is a sufficient position with regard to the expression of the Commander-in-Chief's views before the Government?—Yes; I have a great feeling that a man can generally express his own views more strongly than another man can for him.

21664. (*Lord Strathcona and Mount Royal.*) I think Lord Wolseley said he looked upon it as being of vital

See Q. 9

importance that on certain occasions he should personally be heard before the Cabinet?—Certainly; but I think as matters stand now—if the South African War were taking place now, if we went back three years—the Defence Committee would unquestionably go into these points, and the Commander-in-Chief would be at first hand sitting there.

8948. 21665. (*Chairman.*) Yes, it has altered the position in that respect. There was one other suggestion of Lord Wolseley, that the Commander-in-Chief should give a certificate once a year to Parliament as to the completeness or deficiency of the Army in *personnel*, equipment, and stores?—That, I think, is a very attractive proposal, in the first instance especially attractive to me because I have raised, or assisted in raising, the stores to a very high level, and I agree with Lord Wolseley that the tendency of all Governments at the moment of the Estimates is to cut down and eat up the stores which have been laid up by their predecessors—it is almost human nature; and I think the Commander-in-Chief's certificate that the troops which were professed to be provided were properly equipped for their duties would be very valuable. But I see great difficulties in the working of such a certificate. The Commander-in-Chief would hold himself bound with the greatest accuracy to inform the Cabinet of any deficiency; or he would inform Parliament, if he gave such a certificate as that of the Comptroller and Auditor-General, with the greatest accuracy of any deficiency in our stores or power of mobilisation. When I come to think it over, it would be supplying foreign Powers certainly with an exact statement of our defences every year. If it was not given to Parliament I do not think it would be a very useful thing. If it was withheld from Parliament the Secretary of State would be pressed in every Parliamentary discussion as to whether or not he had got the certificate of the Commander-in-Chief on some particular point. Let me take one illustration of the sort of thing which would reasonably occur. Supposing the reserve of rifles ought to be 500,000, the Secretary of State may say, "We have no war in prospect, the reserve is rolling up at a very considerable pace at the existing rate of manufacture, and I am satisfied with it. I cannot pay an enormous additional price in order to induce firms to lay down additional plant to complete the whole thing in a year and a half, I must be satisfied to do the thing in three years." The Commander-in-Chief might, on the other hand, feel that his responsibility to Parliament forced him to say that we were complete in our immediate equipment, but that our reserve of rifles was lamentably deficient and ought to be made up at once. Then you would have the whole question debated out on each point, and I think that would add very greatly to the Parliamentary difficulties. And I think also when you are dealing with two men, one of whom has to defend anything done by the other, the Secretary of State must either dispense with the services of the Commander-in-Chief or he must defend him on any point which he has taken. He may influence him for the future, but he cannot throw him over. But to put the Commander-in-Chief in the position of saying at any moment, "I shall refuse you your certificate if you do not take my views," would be, I think, very difficult in the working of two high officials.

21666. (*Sir Frederick Darley.*) There is an illustration of that in Lord Wolseley's pressing for more guns for the Artillery. At one time he said there was a great shortage in guns as compared with the guns of foreign Powers in artillery?—Yes.

21667. And he was pressing for those guns. And in giving his certificate he would have had to point out that there was that deficiency in comparison with the artillery of foreign Powers?—The case of guns is exactly a case in point. I think the Commander-in-Chief ought to have every power of pressing his view upon the Cabinet about it, but on that point I should be pressed to-morrow as to whether I had the Commander-in-Chief's certificate that we had the best gun that could be got. I should have to give the whole details, and I should be pressed—my position would be almost impossible—for every detail of military opinion; and although I am all for treating Parliament with the utmost frankness, I think our Parliamentary system is more difficult than that of any foreign nation with the view of keeping our deficiencies sufficiently from foreign observation.

21668. (*Chairman.*) But with regard to deficiencies in reserves, we have had some evidence with regard to the position brought out by a Memorandum of Sir Henry

Brackenbury, which you no doubt know, of the 15th December, 1899?—Yes.

21669. We had evidence from Lord Lansdowne about it also, and is it not necessary in some way or another to prevent a state of things such as was brought out by that Memorandum?—I think that it is absolutely necessary. I think the proper way to do it is the one which we have adopted. We have laid down exactly what troops we propose to send abroad. Parliament may at some time reverse it. We propose to send 120,000 men abroad. We then propose to mobilise a certain number of troops at home; and I think, whatever disadvantages such an organisation may have, it has the main advantage that you can, with regard to each Army Corps and with regard to each division, see at a glance whether they have or have not the requisite stores.

21670. But was not there the same position in 1899. You were acting then under the Memorandum of Mr. Stanhope, which laid it down that two Army Corps were to be ready for service abroad and one at home; and yet the Memorandum by Sir Henry Brackenbury brought out that the reserves were lamentably deficient in almost every respect even for the two Army Corps?—I think that the thing goes a little higher up than the Secretary of State. I was not of course a member of the Cabinet in which Mr. Stanhope sat, but my recollection is that some question of equipping even that force for service abroad was pressed by the War Office but was not accepted, I will not say whether by the Treasury or the Cabinet—I do not know; but I am aware that full provision of stores for that force was asked for and was not conceded at that time.

21671. But that might happen under your system also for the 120,000 men?—It certainly could happen, but I think that the danger is minimised from the fact that the stores will all be actually under the hands of the officers who have to use them. In old days, in the days you are speaking of, the stores were all massed in Woolwich in one body; it would have taken six weeks to have got them out of Woolwich. That was not a question that had been considered at that time. The decentralisation of those stores began under Mr. Stanhope, and now the point which we have reached is that of providing each Corps and each Division with its own stores in its own place. That, of course, makes a great difference, because you are immediately told by the General Officer Commanding, "I have not got proper stores to mobilise."

21672. Then is it the duty of each General Officer Commanding an Army Corps to report to the War Office if he has a deficiency of stores?—Certainly; and I think as soon as we have the Army settled down again, which is rapidly happening, every General Officer Commanding will be held responsible for seeing that he has got his proper number: the proper number of transport wagons, the proper supply of clothing, and so forth.

21673. For service abroad?—For service abroad Of course that is what is intended by the mobilisation system, but I quite agree that it would be a good thing that the Commander-in-Chief should draw up a statement yearly of the position so far as he is concerned. At the same time I should deprecate its being a public document in any shape or form. Personally, I should like to feel that that pressure existed on the Secretary of State; but I am looking at what would be the efficient working, and I hardly see how the system could work.

21674. Do you not get something of the kind now, because at the present time the Secretary of State makes an annual statement that is presented to Parliament, and I suppose it must be based on information with regard to stores?—I cannot call to mind any statement made by the Secretary of State which would have tied him down very closely in that respect.

21675. And you think that the Commander-in-Chief ought to make a statement for the Secretary of State that would tie him down pretty closely?—I think that it certainly should be so; but I must say that I think General Brackenbury had only taken office a short time before 1899.

21676. In January, I think?—And I think that if General Brackenbury had been in that post earlier he would have taken care that such a statement had not got to be made as was made in 1899. I think I may say that the officer who preceded him was overworked and

The Right Hon. St. John Brodrick, M.P.

1 May 1903.

The Right Hon. St. John Brodrick did not bring all these matters as much to notice as he otherwise would have done.

M.P.
1 May 1903. 21677. Would such a certificate help you in dealing with your colleagues?—I think so. On the other hand, the Commission will recollect that the wheel of public opinion goes round very rapidly, and that whereas the War Office was denounced two or three years ago for not having sufficient stores for 250,000 men, we are now considered voracious for asking to send 120,000 men abroad. Therefore we might not get the support.

21678. There is one question with regard to this statement coming from the Commander-in-Chief that I should like to be clear about. Under the present organisation he has only supervision of the greater part of the War Office that deals with stores; would he be in a position relatively, to those Departments, to give a statement of the kind that you mention?—I think that the difference between supervision and control is one of the most useful definitions which has ever entered into the public service. An officer who is under the control of another will, so far as my experience goes, never move if he can help it without covering himself with superior authority—it seems natural. Under the old system of control by the Commander-in-Chief a great deal was exercised by the Adjutant-General on his behalf. I have constantly seen at the Adjutant-General's door, under the old system, the Director-General of Ordnance waiting for an interview to ask whether he should try a certain type of gun; the Inspector-General of Fortifications waiting to know where he shall site a particular barrack; the Quartermaster-General waiting to know whether he shall adopt a particular store. All that has been got rid of by putting those officers under the supervision, and not under the control, of the Commander-in-Chief. They are bound to go ahead with their own business now and to complete it, and they are responsible to the Secretary of State for doing so, and to the Commander-in-Chief also. On the other hand, the Commander-in-Chief of course feels that he is consulted on all questions of principle connected with each Department. If there is to be a new field-gun he indicates whether he requires that it shall be a lighter gun with a longer range and greater muzzle velocity than at present. But all the steps to that are taken by the Director-General of Ordnance. At any moment the Commander-in-Chief can come in and say, "I want to know how you are getting on," or he can bring before me the fact that things are going too slowly, or that he would like three patterns made instead of two. But the work goes ahead without the overlaid Commander-in-Chief having to put his hand upon it. On the other hand the Secretary of State is not overburdened by it. The Secretary of State exercises less control and authority over these great officers than the Commander-in-Chief would feel bound to exercise if he had to control them. They come to me if they have a question of principle or difficulty, but the Quartermaster-General, Sir Charles Mansfield Clarke, supplied the forces all through the war with the minimum of interference either by the Commander-in-Chief or the Secretary of State.

21679. (*Sir George Taubman-Goldie*.) Why does the Secretary of State exercise less control over them than the Commander-in-Chief would feel bound to exercise if he were in the same place?—Because he has not the same expert knowledge as the Commander-in-Chief.

21680. He is not a soldier?—He is not a soldier. He has to settle the principle, and he has to trust these officers (who, after all, are officers who stand only next to the Commander-in-Chief) to carry it out. On the other hand, if the Commander-in-Chief felt that he was going to be personally responsible for whether a barrack is sited in a proper place or an improper place, he would feel bound to go down and see it. I think it is a great advantage that the Secretary of State should go and see these things when he can—a new barrack, a new cantonment—but he does not feel bound to do it in the way that the Commander-in-Chief would. If it was under his control the Commander-in-Chief would feel bound to go to Salisbury Plain ten times for once that he goes now. And the system, I believe, has worked perfectly. The only danger would be this. Lord Wolsley stated that he had had no difficulty—that all the staff were loyal to him, and Lord Roberts, I know, feels the same. Of course, both Lord Wolsley and Lord Roberts had a very exceptional position in the Army, but it is possible that you might have at some future date a Commander-in-Chief who was not as loyally

supported by his colleagues—we have no reason to anticipate it; and the one thing that I think would be a mistake would be, what Lord Roberts suggests that you might have, though he did not wish it, an officer up to whom all these three or four officers reported, and who would deal directly with the Secretary of State. That, I think, would put the Secretary of State in a very difficult position. You would then have an officer independent of the Commander-in-Chief, and possessing very high administrative functions. Being independent of the Commander-in-Chief, he would almost certainly differ from him on important points, and I think it would be putting a very serious responsibility on the Secretary of State if the Commander-in-Chief were to say, "I cannot put my Army properly into the field without a new field-gun," and if the supply man who had the Director-General of Ordnance under him were to say, "In my opinion the gun is admirably fitted, and as good as that of any foreign army," if the Secretary of State had to decide between the two. At present you never reach that point, because in the last resort the Director-General of Ordnance is the subordinate of the Commander-in-Chief, the Commander-in-Chief is the principal adviser of the Secretary of State, and you would have both opinions, but you have got some subordination about it.

21681. Then in the matter of guns you must always have the Commander-in-Chief a higher authority than the Director-General of Ordnance?—Yes.

21682. (*Chairman*.) Not with more expert knowledge; the Director-General of Ordnance may be the greatest expert in the matter?—He may; not with more expert knowledge, but the Commander-in-Chief must have higher general experience. In India, I believe, the Commander-in-Chief has always been a man of higher professional capacity than the Military Member of Council, but such a thing might happen as your having a Commander-in-Chief who had not got the same experience in the field as the other great officer who is to set up beside him; then that would put the Secretary of State and the Government in a very great difficulty; you would have "two Kings in Brentford."

21683. (*Sir George Taubman-Goldie*.) On the question of expert knowledge, should not the Secretary of State rather seek the opinion of a great expert than of somebody who has perhaps only general knowledge?—I think he would, but I think that the same argument which I ventured to use earlier comes in again, that so long as you have the same subordination of the Director-General of Ordnance to the Commander-in-Chief, and the Commander-in-Chief comes in to be consulted very early in the day, the opinions are not so likely to run athwart each other as if you had one man working it up to the last degree and then finding that he is entirely at variance with the other, that his professional knowledge and so on is called in question and he stands to his guns.

21684. (*Chairman*.) There have been comparisons made between the organisation of the War Office and that of the Admiralty. Do you think that the Admiralty organisation would be applicable?—My feeling is that the administration of the Admiralty is compared very favourably with that of the War Office without consideration of the different positions of the two services. It is possible to get, and I hope we have succeeded in getting, as nearly perfect a Navy as can be got; at all events, we have as good a chance of having a perfect Navy as any foreign nation has. But in the Army you are always comparing like with unlike. You are comparing a voluntary system with tremendous calls all over the globe with systems of compulsory service which have not got the same calls. You cannot have a perfect Army, you can have a perfect Navy. Therefore a system which in the Admiralty passes muster as the very best, and acts very well, does not get the same credit in the Army. A great deal which is perfect in the Admiralty, because the results can be made perfect, is imperfect in the Army, because the results must be imperfect. That is my feeling. And with regard to a Board, as I mentioned just now, the Admiralty have from time immemorial accepted the authority of the First Lord of the Admiralty. Unless the proposal suggested as to making a Military Secretary of State were carried out, I do not think you could ever clothe the Secretary of State with the authority in the Army which the First Lord of the Admiralty has in the Navy.

21685. (*Viscount Esher*.) Surely it is the Board of Admiralty rather than the First Lord?—Yes, it is the Board of Admiralty speaking through the first Lord.

21686. (*Sir George Taubman-Goldie.*) It is always "My Lords"?—Yes; but that goes a great deal deeper than you think. Take one case. I have endeavoured to see every general officer, or most of the general officers, who have come home from South Africa, because it has been the greatest interest to me to hear, if they were good enough to call upon me, the part that they have taken, but there is not, and I doubt if there could be, any general system such as there is in the Admiralty. In the Admiralty it has been the custom for senior officers returning from services abroad to be more in contact with the First Lord of the Admiralty than has been the custom in similar cases for military officers with the Secretary of State.

21687. Are we always bound to remain in the same groove; is there any reason why a General when he comes home should not follow the practice of seeing the Secretary of State for War?—I have made it understood that I take it as a compliment if any officer coming home from active command will come and see me, so that I may have an opportunity of finding out from him what has been going on, and hearing anything he wishes to say; but, of course, he pays his respects as a matter of course to the Commander-in-Chief, and I think the Commander-in-Chief's position is one which, whatever changes we may make in Orders in Council, will always remain the same in that respect. The Army looks to the Commander-in-Chief; it has always had a Commander-in-Chief, or practically always.

21688. (*Viscount Esher.*) No, not always?—Well, for a great number of years. I know, of course, there was a hiatus, but for a great number of years it has been a Commander-in-Chief, and whatever you give him by Order in Council, or denude him of, I think the Army will look to him. Then it follows that the more you exalt the Commander-in-Chief the less you can exalt the opinion of a Board of which he is one. You must choose between the two. I think it would take many years to give a board the same authority as is now attaches to the Commander-in-Chief in the Army. I am not sure that you could ever do it; I am quite sure that you never could give the Secretary of State the same authority in the Army as is now enjoyed by the Commander-in-Chief, whatever functions you put upon him.

21689. You consider that authority of great value?—I do. I think that outside Parliament (which is a different question, on which I may perhaps be asked) the public will far more readily accept decisions if they are known to be given by the Military Head of the Army, the Commander-in-Chief, than if they were supposed to be simply the decisions of a civilian.

21690. That is not the comparison. I have in my mind the Board of Admiralty; do you think that a decision of the Commander-in-Chief is accepted by the public more readily than a decision of the Board of Admiralty?—No, I think that the Board of Admiralty has a very high authority attaching to it in naval matters, due, of course, partly to long tradition, which you could not set up at once in the case of any board that you might establish in the War Office.

21691. (*Sir George Taubman-Goldie.*) But, in minor matters, would not the Generals who, under your system of devolution, command Army Corps to a large extent satisfy public opinion by their decisions?—I think so. I think that the authority of the General Officers Commanding Army Corps has enormously increased, even in the last year, and will increase as we put upon them, as we intend to do, more extended functions.

21692. Then, to some extent, they will fill the place, as regards minor matters of discipline and other questions, which has been hitherto filled by the Commander-in-Chief?—I think on some questions they will—on such questions as inspection. Hitherto inspection has been entirely from Headquarters, and I think under the system of the General Officer Commanding an Army Corps inspecting in his own district his inspection will become the most important event of the year.

21693. (*Sir Henry Norman.*) On such a question as armaments the opinion of the Commander-in-Chief, I suppose, would be accepted probably before the opinions of the various Officers Commanding Army Corps?—True. As I said before the authority of the Commander-in-Chief in that respect, as the last word, would be accepted by the Army where even that of the Officer Commanding the Army Corps would not.

21694. (*Sir George Taubman-Goldie.*) I wish it to be

quite clear that I was not referring to such questions as Sir Henry Norman has mentioned. I quite understand that on such general questions you have to speak with the authority, you cannot call it of a Military Board, but, whatever name might be given to it, of a Board corresponding with the Board of Admiralty, which does speak with authority?—I only suggest that the Board of Admiralty all belong to one branch of the Service; and therefore I think every man in the service looks up equally to the different members of the Board of Admiralty. If you had a Military Board you would have some questions which affect only one branch of the service, but more than half the opinions would be given by men who were unconnected with that branch of the service. For instance, I think that the opinion of the Commander-in-Chief with regard to the substitution of the lance for the sword would be accepted more readily than the opinion of a Board which would necessarily include an engineer, an artilleryman, and of course an infantry man, and would also include the Army Medical Department, and that everybody who disagreed would pick out those various officers and say, "Well, but what acquaintance have they with that particular question?"

21695. (*Chairman.*) And it might not have a Cavalry officer at all?—It might not.

21696. (*Viscount Esher.*) But to take your own illustration, in point of fact has that decision been accepted by all eminent Cavalry officers with satisfaction?—It has not been accepted universally, but I have never heard any suggestion that the Commander-in-Chief was not the right man to deal with it.

21697. (*Sir George Taubman-Goldie.*) The present Commander-in-Chief?—Yes.

21698. The whole question is there?—I do not reflect on others, but of course Lord Roberts's position is exceptional; his experience is so great; no officer has ever before commanded a quarter of a million men in the field and come straight home with the most recent experience to take the office of Commander-in-Chief.

21699. I think that really sums up the whole argument, if I may say so?—I do not know. I have in the House of Commons heard Lord Wolseley's opinion quoted with the greatest possible authority and treated with great respect.

21700. Lord Wolseley, too, has commanded armies in the field, and carried on a number of successful operations?—Yes.

21701. (*Viscount Esher.*) Do not you remember Lord Wolseley's opinion also being quoted and treated with great respect when he was Adjutant-General between the years 1882 and 1885?—Yes. Lord Wolseley, of course, in his early days also enjoyed very great authority; it was not only due to the fact of his being Commander-in-Chief.

21702. (*Lord Strathcona and Mount Royal.*) But you assume that every Commander-in-Chief would be, or ought to be, an officer of very high standing?—The highest.

21703. (*Sir Frederick Darley.*) Of high standing and great experience?—Yes; that is my view, because of the authority he enjoys or should enjoy. In fact, just as in the Government I think the strongest man ought to be Prime Minister, and that the designation of a man who was a *persona grata* to many, and was accepted by two or three rivals and therefore became Prime Minister is an anachronism now, so it would be in the office of Commander-in-Chief.

21704. (*Chairman.*) I think, then, we might pass on to See Q. 1-1 your next point, the Intelligence Department?—I think 264-457. you have heard evidence from General Nicholson with regard to that.

21705. Yes, we have had evidence from General Nicholson. His position of course has rather altered since then by his being admitted to the Defence Committee of the Cabinet?—His position has been altered doubly, first by the institution of the Defence Committee, and, secondly, by his having been placed upon the War Office Council and given a greatly improved status. The work of his Department has enormously developed, and it was impossible until the last few weeks to see to what extent his Department would be taxed by the work of the Defence Committee. We now find that his work, his own personal work, and also the work which has to be prepared for him, is, at all events for the present, and so far as we can foresee will be for a long time to come, exceedingly onerous and of

*The Right
Hon. St. John
Brodrick,
M.P.*
1 May 1903.

the first importance. I have waited until we realised that to make any change in his Department I felt sure that he must have an increase of staff, even apart from the work of the Defence Committee, but I felt that it would be much better to see the full extent to which it went, and then to go to the Treasury. I think it will be necessary, without going into actual details, to raise his staff certainly by half as many again, or something like that—by 50 per cent., of which more than half, probably two-thirds, will be due to the work of the Defence Committee. I think it is very important also that he should have a deputy who can represent him on many matters, because no one man could possibly carry out the present work and get the holiday that he has a right to in the year. We realise, of course, that it is impossible to prepare schemes for offence and defence in regard to the British Empire as you may for a nation that has only got two frontiers on the Continent of Europe. But at the same time I think, apart from the experience of the War, the Commission will feel that a great deal required to be done in that respect which has not been done.

Q. 327. 21706. The evidence which General Nicholson gave to the Commission when he came in October last was that his staff remained the same as formerly; but that you have explained was intentional, in order that it might be increased up to the proper limit now?—I appointed a Committee to consider his staff, and while they were in the middle of meeting, the first meetings of the Defence Committee began, and I adjourned the discussion of the matter until I had seen for two or three months what the work of the Defence Committee was, as it affected the work of General Nicholson, and I have a proposal now before the Treasury.

See Q. 10737. 21707. Lord Roberts suggested that the position of the Director General of Military Intelligence ought rather to be that of the Quartermaster-General?—I know that Lord Roberts has a very strong opinion on that point, and he has of course an experience in the field which makes it very difficult to differ from him. His view is, I know, that the work done by the Director-General of Mobilisation should include the training of officers, to select sites for camps, and a variety of work which is at present done by the Quartermaster-General who locates the troops. As regards the names I do not think that is very material; I think the functions are much more important than the names. Whether General Nicholson ought to be called Quartermaster-General or not, I think does not matter very materially; but what I would submit is of the first importance is that the Director-General of Mobilisation and Military Intelligence should have no executive functions at all. I feel that we must have a brain to the British Army. The man who has to do the thinking, to prepare the schemes and meet all the various calls which come in in that way, ought not to have his time taken up with writing letters and giving orders. In so far as he needs to communicate with general officers or others, let him have the fullest possible latitude in that respect; but I have a great fear that if he is to take a whole series of officers and to train them for field work, his time would gradually get eaten into by that, and that one of the greatest defects of the British Army that I have seen and that was found in the war, would not be redressed. Therefore, though I should try in any organisation to meet Lord Roberts in any way and as we have attached to the Army Corps Staff Officers for the particular work which Lord Roberts tells us was badly done in the war, I should deprecate making the Director General of Mobilisation an executive officer.

21708. I do not think Lord Roberts proposed that he should take over the Supply duties now, under the Quartermaster-General; it was only certain definite duties?—It is just those duties that I am a little afraid of. The Supply duties are so enormous that they take one man's whole time almost, but I think there is a tendency, which I am endeavouring to check, for the Director-General of Mobilisation to hold himself obliged to take a great deal of work that is not really thinking work at all, or advisory work.

21709. I mention that because in the notes that you were good enough to give to me you said Lord Roberts spoke of the little work that the Quartermaster-General had to do. I did not gather that that was the position exactly he took up. He rather argued that all the supply duties should be under one head, and that the little

work that still remained of the old Quartermaster-General should be transferred to the other officers?—I think that is what Lord Roberts intended. It will be realised of course that the Supply duties of the Quartermaster-General is one of the most important branches of training that an officer of the Army can have. The change was made by Mr. Stanhope. In the old days the whole Supply duties of the Army at home were done by civilians. The consequence was that when the Army was mobilised for service in the field you had no officer with any experience of that particular kind of work. At this moment the Quartermaster-General's Department consists of 16 officers and 55 clerks, who are employed on Supply, the Remount Department, the Transport, and so forth. He has under him besides the provision of remounts, the movement of troops, the distribution of barracks, stores and equipment, the administration of the Army Service Corps, the Army Pay Department, and the Army Veterinary Department, and the establishments employed on those services; and his charge is one of the most onerous in the War Office. I think Lord Roberts was only alluding to the little work he did with regard to mobilisation which he wished to transfer.

(*Sir Frederick Darley.*) I think he also alluded to the fact that as to a certain portion of the Quartermaster-General's duties there is no officer now really to discharge them. I refer to the answer he gave to question 10452. He is asked by Lord Elgin, "How would you get the training that you want for Quartermaster-General?" Then he goes on and explains; he says, "You must in the first place recognise the necessity for a Quartermaster-General's Department. Now there is no such Department. There is an officer called Quartermaster-General, Sir Charles Clarke, but he is really Director-General of Supplies and Transport. He has nothing to do with the work of Quartermaster-General, except as regards the movements of troops. The officer who is nearest to it is the Director-General of Military intelligence. Then he has only the bureau, as it were; he has nothing to do with the field; that is divided between the Adjutant-General and the Inspector-General of Fortifications. I do not know exactly how it is divided, but I do know that in many matters, such as encampments, water supply, etc., Quartermaster-General's training is needed. I remember finding a hospital at Bloemfontein pitched immediately over the main water supply. In order to have all such matters done well in war, officers must be trained in peace time."

21710. (*Sir Henry Norman.*) I think Lord Roberts meant really that the duties which were originally discharged by the Quartermaster-General's Department have disappeared and have not been replaced. For instance, so far as I know, there were no officers in the War in South Africa, what we knew as the old Quartermaster-General's Department, who reconnoitred and took up ground for camps and that sort of thing. There were great complaints that camps were taken up in unsuitable positions, and, in consequence, a good deal of enteric fever and sickness occurred, which would have been prevented had officers been accustomed to select ground for camps?—I think there has been a little tendency towards removing some of the functions of these officers according to the great activity of the officers who have exercised the post of Quartermaster-General. We have had two most admirable Quartermaster-General's running in Sir Redvers Buller and Sir Evelyn Wood, and there was a tendency when Sir Redvers Buller and Sir Evelyn Wood each became Adjutant-General, for matters to become Adjutant-Generals' questions which had been Quartermaster-Generals'. I think there has been in a certain sense a little readjustment, but Lord Roberts is putting that right, and I think the name does not matter. The disappearance of a particular class of officers with a particular class of function would be a serious matter; and that, I think, is being set right by the Army Corps Staffs. I asked Lord Roberts to satisfy himself, and certain officers have been appointed on the Army Corps Staffs called, I think, Assistant and Deputy Assistant Quartermaster-Generals, to do that work.

21711. And you think that evil which was brought to notice in the South African War has been properly provided for?—I think there is no doubt about it.

21712. On something like the system in India, in which there is a Quartermaster-General, or an Assistant Quartermaster-General or a Deputy Assistant Quartermaster-

master-General with every force in the field?—I think on doubt they are provided for now and provided for with the title by Lord Roberts' desires. The only difference really that remains now, as far as I know, is the main title of the head of the office. Lord Roberts would like General Nicholson to be called Quartermaster-General. I am afraid I am a little conservative. If you change his title I cannot, personally, quite see why the Quartermaster-General is the man who has to get the intelligence for the Army. He has to quarter the Army.

21713. (*Viscount Esher.*) You give him executive functions directly then?—Yes, you give the intelligence man executive functions at once, and I want to keep him from them.

21714. (*Sir Henry Norman.*) You are aware that the Quartermaster-General was really charged in wars in India with what you call the Intelligence Department, and people under him were employed to get information?—Yes; but the Indian Command was more limited than the Home Command.

21715. So far as you know that might be done in India at the present day; it certainly was recently. The Quarter-master-General was really the head of the Intelligence Department?—I think, broadly speaking, there is that difference. The opinion of the Cabinet was strongly, I think, that we must not mix up advisory and executive functions. I do not think Lord Roberts sees the same objection.

21716. Then who would get intelligence in the field? Would the head of the Intelligence Department have to detach special officers in his Department as Intelligence officers for an army in the field?—The Intelligence officers in the field are trained of course by the Officer Commanding the Army Corps at Home, and I presume that he would indicate officers from his Department who would then come under the command of the officer commanding in the field.

21717. Under his immediate command?—Yes.

21718. (*Sir Frederick Darley.*) On his staff in fact?—Yes, on his staff.

21719. (*Lord Strathcona and Mount Royal.*) You consider that there would be more convenience in working and greater efficiency in having the Intelligence Department a distinct one, not connected with the Quartermaster-General?—I do.

21720. (*Viscount Esher.*) Then with that one exception that you mentioned just now, the difference between Lord Roberts and yourself to which he referred in his evidence has been adjusted?—Yes, that is so.

21721. At the moment when there was a difference at any rate of opinion between you and Lord Roberts upon that point, was the question raised before the War Office Council?—No, the question was raised very early in the day. I think it was brought before the old Defence Committee. I thought it was a point which went higher than the War Office Council, and I did not wish it to appear to overrule Lord Roberts, and it was brought before the old Defence Committee, where it was discussed by four or five members of that Cabinet Committee with Lord Roberts; and in the end, I know, Lord Roberts expressed himself willing to leave the matter as it was, provided that officers to fulfil these functions were attached to the staffs of the Army Corps, which was done.

21722. (*Sir Henry Norman.*) In your opinion then the objections raised by Lord Roberts here have been sufficiently provided for?—Yes.

21723. (*Sir Frederick Darley.*) His evidence was not read to you. He was asked by the Chairman, "But how would you train a man to do those duties now?—He should be constantly with the troops, especially during the manoeuvres. He should select ground for camping purposes, report on the best position for outposts, make any sketches of the neighbouring country that may be required, etc. There is one officer now told off for these particular duties or for special operations in war, reconnaissances, and intelligence. They are all divided now amongst different people. Marches now go to the Adjutant-General. Encampments I do not know who does it." That was on December the 4th.

21723. (*Sir George Taubman-Goldie.*) But your decision was ten years later than that at the Defence Committee of

the Cabinet, was it not?—No, that point was brought before the old Defence Committee of the Cabinet early in 1901, if I recollect right, as read now. It is difficult to speak offhand; I have not got the designation of the duties; but my impression is that the duties have been in respect of the Army Corps Staffs redistributed as Lord Roberts there suggests. I think there may be some little overlapping of responsibility under the old Order in Council, which might be corrected; but of course our one desire would be to meet his views in that respect. I think, practically, the work is done as he proposed it should be done.

21724. (*Sir Frederick Darley.*) He goes on in the next question; the Chairman asked: "Are not encampments done by an Engineer officer in charge of encampments?" and the answer was, "They ought not to be. Engineer officers have to do with the water supply, but the selection of ground is distinctly the duty of a Quartermaster-General." The questions to which I refer are 10452, 10453 and 10454?—I should like, if the Commission would let me, to look at the functions; I do not want in any way to seem to contradict Lord Roberts, but my impression is that he is under a mistake. I went into this question with the Permanent Under Secretary about six months ago, and he assured me that this particular point had been met and was now done by officers called Assistant Quartermaster-Generals. If you take the Army Orders of the 4th March 1902, this is what you find: "The duties of Staff and Departmental officers at the Headquarters of Army Corps comprise the supervision and control, under the General Officer Commanding, of all Army Services, including Mobilisation and Intelligence. These services are divided into the following groups (b) Movements, distribution, and quartering of the troops, concentration and manoeuvres, camps, selection in conjunction with the Engineer department of manoeuvring, training and camping grounds, land ranges, etc." Consequently this officer had distinctly got the control.

21725. (*Viscount Esher.*) But, of course, a question of that kind is a very technical question, and one would imagine that the Commander-in-Chief, carrying the great weight of Lord Roberts, would get his way at once upon a question of that kind. What were the obstacles?—Undoubtedly that would be so, but in this case it involved completely overturning the Quartermaster-General, making him the brain of the Army with executive functions, and in that way creating a new officer to discharge Supply and Transport.

21726. I was not speaking of the Quartermaster-General himself, I was speaking of the minor aspects of the question which you say have now been settled, but were only settled after a considerable time?—I do not think they were. When Lord Roberts first raised this—I remember very well it was very soon after he came home, in a memorandum—I almost at once got the Defence Committee of the Cabinet to consider the major questions. The moment they had settled the major questions I asked him to appoint, I think I am right in saying, at once to appoint a subordinate officer or two who, with one of the permanent officials who was aware of what had taken place before, would draw out a scheme for the future. And immediately those officers set to work upon the appointments under the Army Corps scheme. If there was any delay it was due to the fact that the new Army Corps scheme was being worked out. But his views were immediately acceded to. I quite agree with Lord Esher that it is a point on which Lord Roberts should be predominant.

21727. (*Sir Frederick Darley.*) What Lord Roberts seems to have thought, gathering it from the evidence, is that the Director of Military Intelligence part of the Quartermaster-General's duties might have been removed, leaving all the other duties exactly as they were vested still in the Quartermaster-General?—Yes.

21728. To make two officers out of one in fact?—Yes.

21729. (*Lord Strathcona and Mount Royal.*) We were told that the money furnished for Intelligence work in South Africa was miserably insufficient, and on one occasion, only I think something like £100 altogether. That was before the War?—Before the War of course I was not in a position to know exactly what was given, but I never heard any complaint. During the War there was no difficulty.

The Right Hon. St. John Brodrick, M.P.
1 May 1903.

See Q. 10454.

See Q. 5911.

The Right Hon. St. John Brodrick, M.P.
 1 May 1903.

21730. That was immediately before the War?—I never heard of any complaint, but I think, generally speaking, that up to the period of the War Secret Service money for intelligence had been very much stinted; Lord Salisbury, you may remember, made a statement to that effect in the House of Lords. Then it was largely increased. I should certainly think it my duty to apply to the Prime Minister if any such representation were made to me.

21731. (*Sir Henry Norman.*) I think complaints were made not strictly with respect to what we have been accustomed to call Secret Service money, but as to the limitation of money to be expended on particular surveys, to prepare maps just previous to the War, which is different from Secret Service money during war, which is unlimited, I believe. That £100 only was given to some survey officer to survey the country, I think, near Ladysmith?—I think the importance of a large Intelligence branch has been only recently comparatively understood, but then I must call attention to this that neither Parliament nor the country in the least believed in our conducting any operations on a large scale anywhere unless it were on the Indian frontier. Consequently there was not even the disposition there now is to meet these services.

(*After a short Adjournment*)

21732. (*Chairman.*) You have mentioned the Defence Committee of the Cabinet once or twice; could you give us the main alteration brought about by the constitution of the new Defence Committee?—The change from the old Defence Committee is a very great one. I do not know whether the Commission is aware that the old Defence Committee, according to its constitution, did most excellent work and very useful work. It was appointed and acted mainly with respect to the Estimates and also in resolving questions which arose between the War Office and the Admiralty. In old days this had been a subject of prolonged correspondence and had often had to be brought before the Cabinet. The Defence Committee went into these subjects and decided what were the respective liabilities of the two Departments. It also was a most convenient machinery for threshing out the very serious questions which arise annually between the two Departments and the Chancellor of the Exchequer as to the necessity of expenditure on a large scale; and to that extent I think the old Defence Committee was very useful.

21733. In what sense did the estimates come before them? Not in any detail, I should imagine, but only on certain points?—On questions of principle. For instance, when the new schemes which, after the War or during the War Lord Roberts and I introduced were discussed, we had a number of discussions under the presidency of the Duke of Devonshire at the old Defence Committee on them; Lord Roberts was present at four or five of them, I think; and the desirability of these changes was discussed with great care and attention. Lord Salisbury, of course, was a member of the Committee. But it was borne in upon the First Lord of the Admiralty and myself that however useful the function of the Defence Committee was, it was absolutely necessary that we should undertake a totally different class of investigation, and that it should be decided from the point of view of the relative equipments of the two services, what under modern conditions it might be necessary for both to undertake. We felt from that alone that any real economy in the two services could come. It was quite clear that the constantly-changing conditions of science may make all question of invasion of this country and our preparation for offensive and defensive action abroad very different. Consequently Lord Selborne and I brought the whole question before the present Prime Minister as soon as he took office, that being at the time of the conclusion of the War. During the War practically the whole War Office was worked to such a degree that it would have been impossible to attempt a fresh organisation of this kind, when the pressure was very severe. The new Defence Committee, as I think the Commission knows from the statements in Parliament, has, as I think, the great advantage of combining with members of the Cabinet the most influential representatives, experts, of the two services, and it also calls in as occasion needs representatives either of the India Office or Colonial Office or any other department affected. The effect of the deliberations of this Committee may be very extensive. It is obvious that their decision, so far as a decision of any body of men can govern it,

must govern our preparations both by land and sea. So far as my Department is concerned, nothing which has been hitherto resolved upon as our force either for defence or for offence abroad can be regarded as settled, as apart from the deliberations of this Committee. If, for instance, they should decide that the possibility of invasion has been so enormously decreased by modern science that we can afford to a large extent to disregard it, that would cause a considerable alteration in the Army Estimates. But, of course, as was explained by the Prime Minister, the functions which he assigns to the Committee are deliberative and not executive. He does not favour the Committee being used (as the old Committee was) as a means of discussing Estimates, at all events until they have dealt with the much more pressing question of what will be the policy of the country in a variety of contingencies which must be submitted to them, and on those questions of policy depend perhaps more largely than anything else what the Estimates for the year will be.

21734. Are the Estimates not intended to go before this Committee as they went before the last?—I think the Prime Minister's view is that the Estimates would not as a rule go before them, but that their business is the larger questions of policy. But I am far from saying that questions of high importance or principle would not go before them. I think, to take a case, just as I discussed with the Defence Committee of the Cabinet (and Lord Roberts was, of course, present) the question of abolishing the old Militia Reserve and substituting a new Militia Reserve, that might go before the present Defence Committee, but that is not what it was mainly founded for.

21735. Would they discuss what was under the Orders in Council one of the chief duties of the Commander-in-Chief, namely, the preparation of offensive and defensive schemes; would those schemes come before the Defence Committee?—I think that such schemes would not necessarily come before the Defence Committee. The Defence Committee would ask, and has asked in very great detail to examine the schemes, which have been proposed for certain operations, defensive and offensive, but the responsibility of the Commander-in-Chief to provide such schemes would not be exhausted by what might be asked by the Defence Committee. For instance, the Defence Committee would take it for granted that the Commander-in-Chief had made up his mind on what principle our positions in South Africa should be defended against any possible incursion from natives adjoining. They would not very possibly have gone into that question; they would deal with the larger questions such as, say, the North-West Frontier of India, on which they would go with great minuteness into the proposals of the Commander-in-Chief in order to estimate what it was necessary for them to recommend in connection with it.

21736. Under the Order in Council of 1895 it was the duty of the Commander-in-Chief—he was the person responsible for all schemes of offence and defence. Was not that so?—Yes; the Order would not be the least disturbed by it; his functions remain the same, but he has at times to submit these schemes to a still higher authority, not in order to modify his schemes, but in order to estimate the effect of them.

21737. Quite so, but would it not be a function of the Committee in a case where there was a danger of complications in the immediate future to require from the Commander-in-Chief the schemes which it is his duty to prepare?—I do not think such a state of things as existed in 1899, as shown in the evidence before the Commission, could again exist. I think that the Committee of Defence would make it their business at a very early moment of the negotiations to call upon the Commander-in-Chief to inform them what were his plans, what would be his requirements under a variety of circumstances; and I imagine that the establishment of the Defence Committee on the present basis is the best guarantee that the country could have that we shall not again be placed in a position of doubt under such circumstances.

21738. Therefore, though the responsibility of the Commander-in-Chief may remain as it was under the Order in Council of 1895, his position in the matter is considerably modified by the institution of the Defence Committee?—I should have rather said strengthened than modified. It is strengthened by the fact that his responsibility will be shared, or rather, the responsibility of adopting his schemes. He will be given the opportunity early in the day of urging upon some of the most responsible

members of the Cabinet to adopt his scheme, and his position will be strengthened by the fact that early in the day they will be aware of what they are committing themselves to.

21739. (*Lord Strathcona and Mount Royal.*) It would be within the province of that Committee to inquire into anything that the Commander-in-Chief might put forward—that would be entirely in order?—Yes, every member of that Committee has the same power of initiative.

21740. (*Chairman.*) You have said that one of your main objects was to bring about a combination between the War Office and the Admiralty?—Yes, there is no doubt that the whole position of the War Office and the Admiralty is brought much closer by such a Committee. I do not think anything the Committee can do will ever in any way release the head of the Admiralty or the head of the War Office from his responsibility, but it will undoubtedly co-ordinate their work to a much greater degree than heretofore, and I think it may lead in the end to a very considerable saving of public money.

21741. (*Sir George Taubman-Goldie.*) It lays responsibility upon them as members of the Cabinet; but surely *qua* chiefs of the War Office and Admiralty it absolves them of responsibility if a Committee of the Cabinet approve of any course over their heads?—It relieves the heads of the War Office and the Admiralty of the responsibility of making out exactly what may be required of them. The head of the War Office might in future say, "My instructions are that taking into consideration what the Admiralty can do, I should not require to put more than 100,000 men here or there into the field." But the responsibility for the equipment of their own Department remains the same.

21742. (*Sir Frederick Darley.*) At one time it was a question of dispute, was it not, between the War Office and the Admiralty as to the defence of coaling ports? I allude to Thursday Island, as to which Department should take it up, whether the Military Department or the Naval Department. Was that a question that would come before the old Defence Committee?—We have not reached those questions at this moment. The position which I think is generally known, with regard to the coaling stations at this moment, is that the War Office is absolutely responsible for their maintenance; they do the work for the Admiralty. I think it costs us between £5,000,000 and £7,000,000 a year, which is usually charged on our Field Army very erroneously. But the whole of that question of responsibility might be raised before the Defence Committee. It is a subject which ultimately the Defence Committee will very likely investigate.

21743. (*Lord Strathcona and Mount Royal.*) But the Defence Committee is only advisory; it does not decide any point?—It is an Advisory Committee on whose recommendations the Cabinet will take action; and therefore the Committee would not lay down the law; the Committee would advise the Cabinet.

21744. It decides no point?—That is so.

21745. (*Chairman.*) Would it be possible to combine these functions of the Admiralty and the War Office under the Committee of Defence?—I think the Committee of Defence will carry that question as far as it can be carried. I remember that Lord Hartington's Commission considered that very carefully, and came to the conclusion that a Minister of Defence could not operate in the same way in this country; but I think the solution of the difficulty has been found by this Committee.

21746. (*Viscount Esher.*) You keep minutes of the Committee, do you not?—Very carefully.

21747. Would those minutes be handed from one administration to another?—Certainly; that is the great advantage of its not being mere a Cabinet Committee.

21748. (*Chairman.*) But they would be entirely confidential documents?—Entirely confidential and secret documents; but they would be certainly made available for our successors.

21749. One has heard them sometimes spoken of as if they would be available for the public, but that would not be intended?—No.

21750. As to decentralisation, do you think you have carried that as far as you can go?—I think we have got a little distance on the way. Certain principles have

been laid down, and a good number of details are following them. There is nothing in the world so easy to talk about and so difficult to carry out as decentralisation. The stronger the officers you get at headquarters, the more difficult the decentralisation is to carry out. In the districts they like to take the opinion of a strong officer at the head of a department, and the more active the officer the more he does. I am sanguine that we shall have got a great deal more done by the end of the present year than has been done yet. First of all, we happen to have at the head of the various Army Corps officers of great activity in both Sir Evelyn Wood and the Duke of Connaught, with great administrative experience, and they are very willing to take over any amount of work of that kind. We have got the Treasury to clear away a certain number of difficulties, and I have now appointed not a Committee, but a little executive body of two or three officers who can decide this, that, and the other question which comes up, to be remitted to districts and dealt with by them, and that that should be the rule for the future. It is only to be done by treating individual cases as they arise. You may lay down a principle, but the main thing to be done is to treat individual cases as they arise. One of my great difficulties about decentralisation is Parliament. The system in Parliament of asking questions on small points appears to make decentralisation almost impossible in some cases. It takes just as long for my secretary to write ten letters a day to members of Parliament saying, "Would you mind going to the General Officer Commanding the district" (who then has to be gone to separately, and then, if they are dissatisfied with that decision, there is a fresh appeal to me), as it does to answer a question and get it settled. But I am endeavouring (and in many respects members of Parliament have been very indulgent about it) to get it understood that all questions that can be settled by the General Officers Commanding must be referred to them. But the tendency is to complain of the Secretary of State taking up individual questions, and at the same time for each person interested to insist on his taking it up, no matter how small it is. I think Sir Evelyn Wood gave you a certain amount of information as to what had actually been done about decentralisation.

21751. Yes, I think he did. And do you think the Treasury are not hampering you unduly in that matter?—I think the relations of the War Office, and I should think of the Admiralty with the Treasury, have been immensely improved in my recollection. I remember seventeen years ago, when I was first in the War Office, it was the habit of the War Office to try the Treasury, to put the point to it, naturally, the Treasury being the arbiter of the point, and, as a rule, if you asked for a large sum it might be insufficiently supported. I made a great appeal to Mr. Goschen that we should act on a different principle; that we should only apply to the Treasury on matters really important, and on the other hand we should get increased consideration of those. And I think that the refusals by the Treasury are infinitely less now than they were; the points of principle of such matters are dealt with fairly expeditiously by the heads of the offices, and the small detailed work is much better done. Of course, with regard to salaries and pay and allowances there must be questions which it seems absurd that our official, to whom you pay £5,000 a year, should not settle. But on the other hand all those questions of pay and allowances are very difficult; they cause very great pressure from outside, and if the Treasury have a general rule which governs all, there is a great deal to be said for it. And I do not think our working has been very much hampered. There are certain rules which are not Treasury rules, but are rules of the whole country, the finance of the country which always must be hampering; for instance, the necessity of spending every farthing by the 31st of March or the balance goes to pay off the National Debt. That in itself is a hampering restriction when you are dealing with 30 millions of money. On the other hand, if you did not have it the Treasury may fairly argue on our expenditure that we should get a large balance over which they would have no control, the accounts would never be closed. But I think, speaking generally, there is a far greater desire to get business along, and it is treated in a far more satisfactory manner than it used to be in the relations of the Treasury and the War Office; and on certain minor questions of expenditure the Treasury have given us a certain sum which will cover writing off of small

losses and so on which has stopped a great deal of trouble—some departmental correspondence.

21752. The larger questions, I suppose, are matters that go between the Secretary of State and the Chancellor of the Exchequer nearly directly?—Yes, and in those cases when I first had to do with the War Office, I think there was great cause for complaint. I think at the time Lord Randolph Churchill resigned, the relations between the War Office and the Treasury were as bad as could be imagined. There was a disposition not to go into the merits of the question among the Treasury officials as well as the Chancellor of the Exchequer; but simply to say, "Well, you cannot have any money," and so on. That is all changed. But of course times must come, especially in preparations for an expedition, when the Secretary of State may be more convinced by his military colleagues than the Chancellor of the Exchequer is, and that is the time when the military authorities would feel the pinch very severely.

*See Q. 1420,
&c.*

21753. But the point I wanted to put was that we had a good deal of evidence from the departments in the War Office with regard to matters to which they had attached importance and which they had not obtained the money for; but it seemed to me that it all came to this, that in all those matters, at any rate in the case of new expenditure, the ultimate negotiation was between the Secretary of State himself and the Treasury, and not between the departments of the War Office and the Treasury. Is not that so?—That would be so; I think it is the only possible system, because the co-relations of the various demands made on the Secretary of State must be pressed by somebody, and very often the greatest desire of one branch of the War Office is not the greatest desire of another branch for expenditure.

21754. So that the department of the War Office has to convince the Secretary of State, and then he states the case?—That is so, and if he fights the case efficiently he will win though he may have to wait. Sometimes things are done later than he may desire, for instances as a rule I think it might take longer to convince the Treasury of the need of a strong Intelligence Department than it might the Secretary of State. But I do not think there is a disposition to be in any way unreasonable.

21755. And the other matters that you have spoken to would be matters arising out of consideration of the Estimates, the details of the Estimates which had been agreed upon by the Chancellor of the Exchequer in bulk beforehand, I suppose. Is not that so?—They are the sort of questions that do arise of course. There the difficulty generally arises on the intermediate questions after the Estimates have been settled. Our difficulty is that when you are dealing with so large a sum all over the globe and having to settle in December, 1902, charges to last on to March, 1904, all sorts of changes must come. You must have regulations, though nobody objects to red tape and regulations more than I do, but you must have them; and when we are continually asking the Treasury to break through regulations, naturally they have to be careful about it.

21756. And who conducts those negotiations on behalf of the War Department?—The Financial Secretary. But what has really improved the relations very much is that the Heads of the Departments, Parliamentary or Permanent, meet and settle the matter together. My belief is that a great deal more can be done in that way than by correspondence.

21757. You have also in the way of decentralisation introduced an Advising Board into the Medical Department, have you not?—I think the introduction of an Advisory Board in the Medical Department has been a great advantage, and I am following it up by the introduction of an Advisory Board in the Education Department. I think that the two things that the War Office has suffered from most in the past have been the division of military and civilian interests to which I alluded earlier, and which I hope has now disappeared, and the isolation of War Office Departments from similar civilian services. For instance, if the Board of Works had very good experience of building, the chances are that the military department which conducts building has a great deal to learn from the Board of Works. In the same way you have the great medical schools all over the country, and up to quite recently our Medical Department was kept quite aloof from them. It is obvious that you want to

interest if you can the heads of the great civilian medical schools in our medical service. We want to get the facilities that they give for study for our medical officers. By instituting an Advisory Board on which some of the most eminent men in the medical and surgical professions are giving almost gratuitous work, we have obtained touch and sympathy which, so far as it has gone, has been productive of the very best results. Exactly the same holds with reference to education. You cannot, in my judgment, treat the education of candidates for the Army before you begin their purely military education as apart from the general education of the country. The public schools and universities are quite willing to meet us and to work in with us, and we have invited representatives of both to join our Advisory Board, and I believe it will be of enormous value. I think in all these cases the head of the Army Department should be the Chairman of the Board, and I certainly have received from the medical people, and so, no doubt, I shall from the educational authorities, every encouragement to persevere in this system.

21758. I think we have had evidence from one member *See Q. 12* of the Medical Advisory Board that one immediate result was the discovery that the military hospitals in this country were very inadequately equipped?—I think modern science has, so far as I know, progressed extraordinarily quickly with regard to hospitals generally, and I think we have fallen behind hand as compared with civil hospitals. For instance, I do not know if you have gone in, say, to Guy's Hospital. You would not have found it ten years ago in anything like the condition it is in now. But we have undoubtedly fallen behind, and some of our hospitals want modernising very badly. On the new Advisory Board, I cannot thank them sufficiently for it; these surgeons who are earning enormous fees in the morning's work, have given up many days in the last year to go round and report on our military hospitals, and in order to promptly deal with many of the questions, I formed a small Committee of their Board, with a military medical officer on it as well, and have given them the administration of the money we have voted for such improvements, in order that they might promptly apply the remedy, and I have no doubt we shall get the whole benefit of the most modern medical improvements of science. Dr. Perry, of Guy's Hospital, who has practically had the whole management of Guy's Hospital, is giving a great deal of his time as Chairman to this Committee.

21759. But it is a very large work, I think we were told—it will cost a good deal of money?—It is a very considerable work. Even going over one hospital it is astonishing what a number of matters have changed completely, apparently in the last four years.

21760. It will take you some time, I suppose, to carry it out in its completeness?—We can only go gradually to work by taking the matter in hand as a matter of business and going gradually through it. Indeed, the construction of a hospital like Netley, which in itself is a very fine building, would render it impossible, even if you had the amplest funds, to make the change: it must be progressive. Since the Advisory Board was started I think our medical arrangements have progressed 40 or 50 per cent.

21761. (*Lord Strathcona and Mount Royal.*) You consider that these changes in their result will be worth all the money that will be spent upon them? I am speaking now of the medical changes?—Yes, I think so. But, on the other hand, I am afraid I must say that there is no department which would find it easier to spend a very large sum of money in getting perfection.

21762. (*Chairman.*) Do you wish to represent that there is great over-work in the Secretary of State's office?—The conditions have been very abnormal for the last two or three years. We have had a war on a very large scale, and the re-organisation of the Army, of which, of course, only the first fruits are being seen at present, has caused an incalculable amount of labour and given use to a very large extent both the papers which come before the Secretary of State and the interviews. I do not think that anybody would complain that there was a difficulty in getting decisions on important papers, and personally for some time past I have not had any papers in arrear except for a day or two. But it is obvious that the Secretary of State at the time when there is a war, or when there is any considerable re-organisation going on must be very heavily burdened. For instance, that Parliament

now meets at two o'clock in the day, and there generally is a number of questions. Before that he must prepare his answers. On Monday he has a War Office Council in the morning; on Tuesday a Cabinet; on Wednesday a meeting of the Defence Committee; therefore in the morning of three mornings in the week, quite apart from other meetings on other things, he is pretty fully employed until Parliament meets at two o'clock, when he has questions to answer. It happened before Easter, I remember, on one occasion, that the first four days of the week I was in charge of business in the House; my business was before the House from 2 o'clock to 7, and again from 9 to 12 at night. It is obvious under these circumstances that it is difficult to keep up with papers and with the rest of the work. But I do not think that under any ordinary circumstances there ought to be any congestion of business provided that the Secretary of State is willing to give a reasonable amount of time to the public service. When he sits in the House of Lords, as Lord Lansdowne did, he has not much in Parliament to think of; but if he is in the House of Commons he ought to be free under whatever Government always to return to his office unless he is wanted for his own business in the House. I do not think it is possible to administer a department of that magnitude by sitting and going through papers in the House of Commons. I have been liberally treated by the Prime Minister in that respect, and I do, as a matter of fact, return to the War Office nearly every day until I am wanted for some important division. There is no question that during a war the Secretary of State is overpressed, but then so is nearly every officer in the War Office. People who only look at the results and can find subjects of criticism, probably are not aware that many men in quite lower positions in the War Office whose services are never heard of have given their attendance there willingly till ten and twelve o'clock at night on countless occasions during the War. Putting that aside, there is no doubt that the Secretary of State for War must always be one of the busiest members of the Government, but I do not think there is any business which, from what I know of it, is as continuous as the business of the Governor-General of India, and there are some other members of the Cabinet—notably the Foreign Secretary—who never expect to get half a day's holiday during the time they hold the office. I do not think that is the case in ordinary times with the Secretary of State for War, but I think that the number of questions that are referred to the Secretary of State ought to be very carefully watched with a view to their diminution. I do not know whether the Commission would care to see a list of the papers that come before the Secretary of State in a day, as a guide to them. I might put it in if you did not care to have them read out; but I believe, roughly speaking, on most days, quite apart from correspondence and interviews, the Secretary of State would have to deal with 40 or 50 different papers. A very large number of them, of course, may be in connection with reorganisation; and when we have got the Army completely disembodied from South Africa, and everything is going on under normal conditions, I imagine that the number of papers will be very considerably reduced.

21763. (*Chairman.*) You will put them in?—Yes.

21764. (*Sir Henry Norman.*) You do not think that the number of papers could be reduced by providing that certain questions should be settled finally by other persons, unless of course you are asked in Parliament about them?—An enormous number of papers are now settled before they come to the Secretary of State. For instance, the Financial Secretary is empowered to advise the Secretary of State on all his papers, but as a matter of procedure he settles nine questions out of ten, but if anybody appeals against his decisions he is bound to send it to the Secretary of State. Or, of course, one of his military colleagues may object to his decision, in which case he appeals to the Secretary of State. Then any question which involves a novelty must come to the Secretary of State. The authorisation of a new Volunteer Corps, which of course involves a large increase in the Estimates, must come to the Secretary of State. And questions of defence, which have to be sent to the Defence Committee, must come before the Secretary of State. All questions of the highest appointments must come to the Secretary of State.

21765. And you think that as much is now done as is possible to relieve the Secretary of State?—I have given very strict directions to all who can stop papers to stop them; that is to say, Sir Edward Ward deals with a great many papers, and I certainly have never found fault with

anybody for not sending up a paper. But most papers bear on the face of them the reason for their having to be settled by the Secretary of State, and very often it is that nobody else's decision is taken. Then of course the real difficulty of the Secretary of State's position is not only that, but he has a vast correspondence, which I believe can be dealt with very rapidly, but people write about all sorts of subjects, and many of them are questions which must be answered by somebody. I myself deal with them as largely as possible by sending them to the proper departments to be answered.

21766. Although they are addressed to you personally?—Yes.

21767. (*Chairman.*) I see that this list which you have put in comprises 35 papers, all on large questions of principle, or involving special political or Parliamentary points, and that it is exclusive of ordinary unregistered memoranda, enquiries, letters, and papers for the Secretary of State to see?—Yes, that is the daily work. I do not know whether you wish to examine me upon it, but I think that but for the constitutional position of Parliament you might leave a larger number of discipline questions in the hands entirely of the military authorities. My desire would be, and has been, to concern myself with discipline questions as little as possible.

21768. (*Viscount Esher.*) That would not relieve you of your responsibility in face of the House of Commons?—That is the difficulty.

21769. But do you feel that if you are responsible to Parliament you must necessarily know the decision beforehand, that is before it is come to?—In all cases in which Parliament is likely to call attention to them I think there are only two courses. There is the one which Lord Roberts suggests, that all the Secretary of State should do is to say, "This particular question has been gone into with great care by the Commander-in-Chief," or as I think Sir Ian Hamilton suggested by the Army Board, "and they have come to a certain decision." All those who are acquainted with the procedure of Parliament would know that that would practically mean that no discussion could take place in Parliament on any military or discipline question. There is no way between that and the Secretary of State being responsible absolutely and knowing the whole case. Then if he is to defend the whole case he must, to some extent, have something to do with the settling of it.

21770. Have you not very often defended a case with the settlement of which you have had nothing to do?—That does happen, undoubtedly.

21771. So I should imagine?—But on the other hand the Commander-in-Chief gave a very admirable illustration to the Commission of how badly in some cases that works—at least how badly that is taken by the public. Last year there was trouble at Sandhurst, the Commander-in-Chief did inform me of the sort of line he was going to take. I said, "This is a question of discipline; I hope you will deal with it as you think proper"; and he did deal with it; but when that reply was given in the House everybody fell foul of the reply, and said, "It is the Secretary of State's business to deal with this." I rather wondered at the time what people would have said if I had said, "This is a question of discipline, I shall take it into my own hands"; whether I should not have had an attack made upon the other side, "Why, you have taken the matter out of the hands of the Commander-in-Chief." Of course one must take whatever is the proper course; but I think myself that every discussion which takes place in Parliament on discipline is a disadvantage to the Army.

21772. But putting that case aside, take the independent action of your Financial Secretary; he very often acts without direct reference to you, does he not?—His action is not generally on subjects which give rise to such questions.

21773. But I am now going to assume that it is, for the purposes of argument. He does in point of fact take action without reference to you, very frequently?—Yes.

21774. Supposing that some action of his gave occasion for a question in Parliament, you would cover his responsibility even though you did not know anything about it?—Yes.

21775. Then why should you not act in a similar manner towards the military authorities?—I do in nine cases out of ten.

The Right Hon. St. John Brodrick, M.P.

1 May 1903.

The Right Hon. St. John Brodrick, M.P.
1 May, 1903.

21776. Exactly?—But the tenth case is probably the one troublesome one. I think too much may be made of this because we have had a great war, and the questions of discipline which have arisen, have arisen in almost every instance in consequence of the war either directly or remotely; the public mind has been very much more intent on these subjects, and therefore, undoubtedly, my time has been much more largely taken up than it ought to have been. The Commander-in-Chief, I think, would himself say that in the more prominent cases of discipline he has wished to confer constantly with the Secretary of State, but I should really be unable to tell the Commission how many hours certain prominent cases have taken of his time and mine, not from any disagreement between us of any sort or kind; but if I were to say that one of these cases has taken every working hour, 14 hours a day, for a fortnight, I should not be over-stating the case, between the number of people that had to be seen, the number of memoranda to be written, and so on. The Commander-in-Chief, I think, has raised—I do not know how far he raised it with the Commission—the question of his opinion being taken alone on a matter of discipline. All I can say on that is that I am prepared to rely to the greatest possible degree on the opinion of the military authorities on a discipline question; but when it comes to the actual handling, or to a decision which has been given being challenged in Parliament, it becomes absolutely necessary for the Secretary of State to be consulted.

21777. You do not think that Parliament would ever take an answer from you to the effect that the decision was the decision of the Commander-in-Chief?—I am afraid it would not. I am afraid the interest of these subjects is too great to enable them to take anybody's decision.

21778. (*Sir George Taubman-Goldie.*) Not even the decision of a Board?—I think the decision of a Board would be even less taken.

21779. I mean a Board including the Commander-in-Chief?—I do not think it would be taken. I know perfectly well that in one of the first cases I had to deal with I happened to have something like the decision of a Board, and quoting it had no effect whatever.

21780. What happens generally is that you promise to give them a special Committee appointed by the War Office. Take the Sandhurst case; I think a Committee of Officers was appointed there to investigate it; that is practically a Board. People must ultimately rely on the opinions of capable and trustworthy men. In the long run, whether they accept it in the first instance or not, they have to fall back upon the opinions of a certain number of men put together—you may call it a Board, a Committee, or whatever you please?—If I may say so, the only experience that I can give the Commission on that is with regard to the Promotion and Selection Board. One of the most difficult things which falls to me is to satisfy, or to attempt to satisfy, people who have been neglected by the Promotion and Selection Board. At one time or another, either the officer in person or people on his behalf, come to appeal to the military authorities, and nothing which appears in the statement of the prominent officers who have decided the case has the slightest effect.

21781. I never supposed that you could satisfy individuals; I was only speaking of satisfying the majority of the House of Commons and the nation?—Quite so.

21782. (*Sir Frederick Darley.*) Those questions have arisen much more frequently in the House of Commons now than they formerly did, have they not?—I think that the general interest of the House of Commons in military affairs has very much increased.

21783. Might not some means be taken for discouraging these questions on discipline, for instance, in some cases by refusing to answer a question when a decision has been come to which cannot be got rid of?—I think it is difficult; Parliament interferes more than it used to do.

21784. (*Sir Henry Norman.*) That would lead to a discussion probably in the House which might be endless?—I think so, for as I said, Parliament does interfere more than it used to do. One thing I am quite certain of is that nobody ever gains by bringing a personal case before the House of Commons; but still there are many people who will. Personally, of course, I feel that

the influence of Parliament is indirectly very often a very great advantage.

(*Sir Frederick Darley.*) Still the House of Commons cannot be a court of appeal from a decision of the Commander-in-Chief. If he has once given a decision it cannot get rid of the decision.

21785. (*Viscount Esher.*) I think Sir Frederick Darley suggests that you should refuse to answer questions. Do you think a minister can do that with any satisfaction to himself? Have you ever tried with success?—I have refused to give information on particular questions, and of course, the Speaker upholds the power of refusal; but that is usually met by an adjournment of the House. And what is more, I may say I think that there is hardly a personal question with which I have had to deal in the last two and a half years—or I will go back to 1895, when I represented the War Office in the House of Commons, in regard to which I have not first of all laid the case before the person who wanted to bring it on or shown him all the papers. It rarely has any effect. There are a certain number of people seized with one side of the case, and they mean to have it out at whatever cost, and I am afraid you must not baulk them, or you cannot.

21786. (*Chairman.*) Then the next point is about officers. Have you any general statement to make about the changes, education, training, and promotion since the War?—I think the Commission would probably take what was said in Parliament as governing the general principle. I think that considerable changes will be necessary with regard to training officers in future. On that, of course, you would rely on what you have heard from the military authorities. I think that our difficulty will always consist in making the Army a career for officers without any means or with very small means, and the amount of training that we require certainly involves now much more the sort of attention that naval officers give to their studies than some military officers have given in the past. There are great difficulties in this country in the proper training of officers, and the greatest difficulty, I think, is in the general change in the habits of the nation, who give a great deal more time to leisure, and take a great deal more amusement than they used to do. The naval officers are exempt, to a great extent, from that influence, from being constantly on service and away. I think also that it is one of the greatest difficulties our Headquarters Staff will have to deal with. The training of foreign armies is carried on on a machine-like principle, and with very great advantage. On the other hand, I think our Army has seen so much more of War under different conditions that in all probability the difference between our officers and foreign officers has been very much overstated; indeed, I very much doubt whether in many respects the training of our officers has not been better. But the two things which seem to me to be clear are that we want a more highly-educated class of man to start with, and that we want to find some means of inducing the young officer to study his profession, and to study to some extent in the first ten years after he joins the Army. If we can do that, I think we shall raise the general standard considerably. Our Army has never lacked officers of prominence and keenness. The question, I think, has been whether, with the extended formations in which armies now fight, you can possibly forego having more of such officers, or having it almost universal amongst officers that they should have a higher standard, as so much more falls on the individual officers. I think we can do something by means of promotion, but more by means of rejection. I do not agree with the system, except for very important commands (Major-Generals, and commands of that description) of taking three officers who are all fit for promotion and putting the one who may seem to you a little the fittest over the other officers who are subsequently to be promoted; but I do very much believe in the rejection of officers who obviously are losing time and setting no example of keenness. But I think that the new Education and Training Department, which Lord Roberts has taken a great personal interest in, will probably have a great effect on officers generally. I am sure that the class of officers who are presenting themselves is thoroughly equal to that we have had at any period of our history.

21787. Do you think we have enough of them?—No; our great difficulty always will be that we can get as many officers as we want on the Active List; but war demands now a much larger number of officers, and I

think the problem that is coming before the Royal Commission on the Militia and Volunteers is a very serious one. The Militia are very short of officers, and the Volunteers still more so. I have halted a scheme which we have for forming an efficient reserve of officers, until we get the Report of that Commission. The idea in my mind, and of which Lord Roberts fully approved, and the Military authorities with whom it has been discussed at the War Office, is that we do not want too many officers in peace; and what is more if we had too many officers in peace it is an enormous expense to have them. What we propose to do, but we have not started the plan yet, because we are afraid of drawing the men away from the Militia and Volunteers, is to allow the Commanding Officer of each regiment to appoint or to recommend officers who should serve with the regiment six months or longer, learn and so forth, and then should be *a la suite* the regiment without further attendance for three or four years, or whatever time it is that the Military authorities may decide. We find a great number of officers who are willing to take commissions at a moment of emergency, and go out, but who practically have had very little training. Our idea is, that supposing the Gordon Highlanders had four such officers attached, a boy just leaving school would put in a year and get his training, and he would then go into his profession, and he would be available for the next four or five years; he would have the privilege of wearing the uniform of the regiment, and so in the next four or five years, in case of mobilisation, a man of adequate age and certain training could be called up at once. But it is obvious that if we did do that, if you take the Line alone, with 170 regiments, to take four officers for each of them would be asking for 700 or 800 more officers, including the Cavalry; and I think it is very likely that that would suit young men who wish to give some military service, so much better than the Militia, that we might find we had only reinforced the Line to wipe out the officers of the Militia. It is a very serious question. I think it is one of the most difficult questions we have to deal with. There is no difficulty in getting non-commissioned officers and men in numbers for the Auxiliary Forces, but there is the greatest possible difficulty in getting officers.

89. 21788. It was stated to us by Sir Coleridge Grove, who is a high authority, that he estimated that about 3,000 or 4,000 additional officers were required to put us on a proper footing?—That may be a very large order, but I am afraid a very large number would be required, the more so that the experience of the War has made Lord Roberts and all these officers feel that you must depend more on the knowledge and training of individual officers, which you require more than numbers.

21789. But Sir Coleridge Grove thought an officer, in order to give him the training that would make him really efficient, would have to be practically in the same position as the officers of the Army; in fact he would have to be an officer on the strength of the battalion; and Lord Roberts, when he came, did not quite concur in that recommendation, because he thought it would mean too many officers on the strength of each regiment?—I think there is a difficulty. I think that Lord Roberts practically hangs the whole utility of the Auxiliary Forces on the training of the officers. He thinks it would be hard to put Auxiliary Forces against trained troops with the amount of training that our officers now get. That training is very difficult to get in this country; at the same time a great deal more is being done every year. We are setting up, for instance, a Yeomanry school on Salisbury Plain, and I have no doubt the Yeomanry would gain under Sir Evelyn Wood a great deal of experience in a few weeks.

21790. (*Viscount Esher.*) Have you thought at all of increasing the cadres of officers of regiments, which was Sir Coleridge Grove's suggestion; it was his suggestion that a certain number of officers should be actually added to the cadre of each regiment; instead of having 30, have 45?—That has occurred to us, of course, but then there comes the question of money and the question of the size of barracks in each case. Already our regiments are pretty fully officered for time of peace. Of course it will be remembered that every man you take extra takes him away from something else. You keep in the Militia a certain number of men who would like to get into the Army, and if you put them into the Army the Militia will be shorter of officers.

21791. (*Chairman.*) But Sir Coleridge Grove's intention

was that while you doubled the cadres of the regiment you would not keep double the number of officers with the regiment, but would draft off some of them to the Militia, and thereby have efficient officers in the Militia as well as in the Regulars?—I think that sort of proposal ought to be considered. But, again it is a very serious one in the way of money, and the more so that you cannot train your militia except in the summer; and for the officers it is very difficult to find them work all the year round. I have proposed to the Commander-in-Chief that we should relieve the Militia officers, when they have nothing to do and give them a chance of coming up for a certain number of weeks and be attached to regiments at Aldershot, and we take £10,000 or £11,000 in the Estimates for it. That would give them an opportunity.

21792. May I read one question, No. 9387? Sir Coleridge Grove was asked: "At all events, you would desire to have a good number of them" (that is additional officers) "away at classes?" and his answer is "Yes; and I should also wish to see some of them away with the Militia battalion when they were training. I should like to see an interchange between the officers of the Regular battalions and the officers of the Militia battalions. Some of the Militia officers could come up to the Regular battalion and serve with them at a time, and some of the Regular battalion could go to the Militia battalion and serve with it, so as to keep up a sort of continuity of feeling between the two, and similarly with the Volunteers"?—It is a very nice scheme, but it means really that you would be paying the men for 12 months instead of one.

21793. (*Lord Strathcona and Mount Royal.*) They would be in receipt of pay equally as the others as on Active service?—Yes, they must be. The Commission will recollect—I only want to remind the Commission—that our total number of troops on paper is very large. You have to find officers for 700,000 or 800,000 men. We know that they are not all equally efficient, but still the mere officering of 700,000 or 800,000 men is a very large amount and out of all proportion to the population. I never made the calculation about officers, but of the whole population of this country the men who go into the Army, Navy, Militia or Volunteers are one out of every four who arrives at the age of 18, for service of one kind or another.

21794. (*Sir Henry Norman.*) Then your officers must be confined to a particular class; even under the recent arrangements with the expenses cut down a man must have some income?—In practice he must; and practically a man must be of a somewhat superior class to command respect as an officer.

21795. (*Lord Strathcona and Mount Royal.*) And he must have some means?—Yes, some means.

21796. Referring to your proposal of taking boys from school for training, as I understand, for a year or so, and then allowing them to return to be educated further, you would take them on probation. I think you spoke of taking boys fresh from school and then giving them training for a year, but that they should not be taken on regularly as officers then?—I do not think we have got any scheme of that kind. We should train them and then let them go to the ordinary avocations of life. In the new arrangement with regard to the University there is an arrangement for commissioning young men at 20 who have done one year's training at Aldershot or elsewhere, and who on condition of doing another training and passing another examination would be commissioned at 20 instead of 22. But the real difficulty of giving any general training is this: either a young man is going into the Army or some other profession, in which case it is worth all we can do to train them so that they shall be at our disposal; for in all these proposals for training Volunteers from schools who do not undertake to go into one or other branch of the Service, are outside the numbers really that we can undertake to deal with.

21797. (*Chairman.*) As to the men, have you any proposals for getting a better class of recruits?—A great change has been tried in recruiting, and anybody who predicted what would be the result would, I think, be rash, but I believe we shall obtain men of a better class. I believe it is already understood that the lot of the soldier is considerably better; and of course after next April when the men are actually getting the extra sixpence after

The Right Hon. St. John Brodrick, M.P.

1 May 1903.

The Right Hon. St. John Brodrick, M.P.
1 May 1903.

two years' service, we should see much more result. Prospective benefits do not go so far as money actually in hand.

21798. (*Sir John Jackson.*) What will be the actual pay of a private after next year when he gets the extra sixpence?—After next year the private who has served two years will get 1s. 6d. a day, 10s. 6d. paid into his hand every Saturday night, all his necessaries, messing, and other expenses being met.

21799. Against the old 1s. 1d.?—Yes; but of the old 1s. 1d. up to the year 1896 or 1897 what he got was 7d. Out of his 1s. he paid 3d. for messing and 2d. went for stoppages of all sorts which were a great advantage to him, like libraries, repairs, washing, and all sorts of things; but still he got practically 7d. into his pocket, that is 49d. After the 1st of April next the man of two years' service will get, so far as I can judge, 1s. 6d. clear, which is 10s. 6d.

21800. Against the 4s. 1d.?—Yes. That is an enormous addition per cent. I think it must tell, and will tell very considerably. But I think that we shall probably see a bit of a set-back after a while for a time until the new conditions are fully appreciated. Then I think the additional money, with the power of taking only a three years' engagement instead of eight years ought to prove very attractive. And I do notice a very great change in the attitude of people towards employing Army men since the War.

21801. (*Lord Strathcona and Mount Royal.*) Is promotion from the ranks more general now than in the past both in time of war and in peace?—I think promotion from the ranks has been encouraged very much of late years, where it can be done. Of course, the difficulty is about money really. We do provide the men with an outfit, but he finds it very difficult very often to live in the regiment unless he has some means; and after all, as a rule, the man who cannot get a commission is a man who cannot have the education. But I am very much in favour of having picked men from the ranks. I often hear a Colonel say that he sees within six months of a man coming in the man will be fit to promote, and he recommends him as soon as he can.

21802. So that it is really better for them in many cases that they should be Serjeant-Major than Lieutenant?—Yes.

21803. Because they cannot afford it?—Yes.

21804. (*Chairman.*) Have you considered the suggestions for compulsory service in the Militia?—For years past I have considered all compulsory questions for service of all kinds, because with the very great difficulties for administering the War Office on the voluntary system naturally anything like compulsory service is a thing which must have attractions. But I think, with regard to the Militia for Home Defence we have to satisfy ourselves before we adopt any compulsory system that we cannot attain what we require on the voluntary system; and I think with regard to the Militia we shall probably find that to a large extent the great gaps in the Militia, which has to make up the one-third of recruits at present, will be filled if the new Militia Reserve, which is of the same class as the Line Reserve, becomes effective. The men are coming in very steadily for it. It was only established two months ago, and if we get anything like the number Parliament has allowed us to raise, namely 50,000, I think we shall probably fill up the Militia with very serviceable men without any compulsory service. And, generally speaking, with regard to compulsion, without going into whether it is desirable or not, I think until we have tested what can be done by giving reasonable pay, which is what I think we are now doing, we have no right to go to the public and say we cannot get men voluntarily. Hitherto, so long as the 1s. has ruled, which was paid, I believe at the Battle of Agincourt, as the pay of the soldier, with the increased pay all round him, you cannot complain that you did not get the best article.

21805. (*Sir John Jackson.*) Probably since the time the 1s. was established the wages of the ordinary labourer have advanced something like 400 per cent?—Yes, I should think quite. Of course, we shall never get what you call a competitive wage in the Army; but taking 10s. 6d. into the man's hand after he has been paid, I am very delighted to hear what high wages those who leave the Army consider they must get in civil life in order to compensate them for what they lose by leaving the Army.

I made a great deal of inquiry last autumn, and I found that men would not look at places at a guinea a week.

21806. What pension does a private soldier get on leaving the Army?—He does not get a pension; the short service man does not get a pension.

21807. I beg your pardon?—Unless he is allowed to serve on to a pension he does not get one except he suffers from some disability. The least pension used to be 8d. a day after 21 years' service. Now, above that there is nothing less than a shilling for those who put in the full period of service, and it varies according to his rank. I established for the garrison regiments a new system, which I believe to be much better, that a man gets 6d. a day when he comes away after he has finished with the garrison regiment, which he can join after 14 or 16 years' service, and then he can serve in the Militia Reserve until he has 21 years' service. After that he becomes entitled to a pension. Instead of giving him 1s. a day for life we have arranged that he should get 6d. a day until he is 65, and then get 1s. 6d. We find that not unpopular, and it is not a bad bargain for the State either.

21808. (*Lord Strathcona and Mount Royal.*) Do these Reservists who join during the War get a higher pension than on the scale of to-day?—During the war the decision was given that pensions previously given for wounds should also be given for sickness. All who joined during the War got the advantage of this.

21809. So that those who had 7d. only before would now have 1s.; those that rejoined?—The man who has been already settled up with ten years ago does not get any increase.

21810. (*Chairman.*) Then as to the Auxiliary Forces, how does the Yeomanry case stand now?—The new Yeomanry conditions have been most successful. The Yeomanry were about 10,000 in number, and trained for seven days or eight days. They have now been raised within two years until actually I think the numbers are 26,000 at this moment, and they are rising every day. I think that we may consider that the experience of the War, showing us that we required more mounted troops, has been taken advantage of. In a certain sense they are an expensive force, but I believe it is far the best investment we could have for our money.

21811. Do you consider that these new Yeomanry regiments would go on an expedition as units?—My own conviction is that we ought to a large extent to depend upon them; that we should do well if a considerable body of Yeomanry and the Militia, and even the Volunteers, were at some time or other given reserve pay in order to come out when the line is exhausted. I believe that our difficulties in keeping up an expedition abroad will always require some support of that kind. I made a proposal, which a good many of the Yeomen in the House of Commons objected to, because they did not like having two classes of Yeomanry, those who were to fight abroad with the reserve pay, and those who were to remain at home. Personally I do not doubt that in the end that system will be adopted.

21812. That means that you would have to form the units for service in something like the same way as they were formed during the War?—I do not think that there would be any harm in leaving the units unformed and allowing a certain number of men to go from each. In any case of a foreign war some time must elapse before you embarked your Yeomanry, consequently, if men were trained they would break into the new units with very little difficulty.

21813. The reason I asked the question is because I want to know whether anything had been done to formulate the organisation necessary. We have had a great deal of evidence to show that at the beginning of the War there was really nothing on which people could work?—No, nothing has been done. The evidence that your Lordship is referring to, I suppose, is the evidence with regard to the Imperial Yeomanry sent out.

21814. Yes?—I should certainly propose as soon as I got power from Parliament, if I do have that organisation properly worked out so that we may know who the colonels and officers would be of these combined regiments, but the time was very short in December, and I had to abandon that portion of the Bill.

21815. But would it not be an advantage to gather together the experience of the men who were concerned

in the organisation for the war as a preparation for any scheme of that kind?—We have got a very careful report from the Yeomanry Committee which gives us everything that took place.

21816. We saw that, but we asked a good many officers who came forward who were concerned either with the Imperial Yeomanry or with the Colonial Forces, and we could not find that their experience had been made use of in that particular way?—I think it is a point which certainly should be thought of. I think the Intelligence Department and Mobilisation Department ought certainly to be prepared with a very precise scheme for proceeding in any future war, especially as we all have the conviction that mounted troops would play such a part in it.

21817. Several Yeomanry officers said that if there had been a manual of some kind laying down the general lines of such organisation, it would have assisted them very greatly, but we could not hear that anything was in prospect?—That point certainly ought to be attended to.

21818. Is there anything you wish to say about the Colonial Forces?—The question of Colonial Forces was dealt with very fully at the Colonial Conference. It was there put before the Colonial Premiers how very useful it would be for Imperial purposes if any force, whether with their reserve pay paid by the Imperial Government or not, could be held in readiness for Imperial needs. There were notable exceptions, especially in the case of Mr. Seddon, who was very much inclined to it, who was willing to adopt it, but with certain notable exceptions the general feelings of the Premiers was that everything must be left to the decision of the Governments and peoples of the Colonies when the emergency arose. Of course we fully recognise the excellent spirit which animated the Colonies in the last war, and we cannot press for anything that they are not prepared to tender. On the other hand, looked at from the Imperial military point of view, there is a very great difference between arranging your own organisation with the certainty of a certain trained support from the various Colonies and arranging it without; you cannot depend upon a thing which the circumstances of the time might cause not to be proffered to you, and, therefore, in a certain sense I was sorry that other Prime Ministers did not take the same view as Mr. Seddon. But I think the subject must be allowed to rest at present. It is evident that there is a strongly pronounced view in the Colonies against committing themselves beforehand, and until that view changes we must recognise that valuable assistance has been given us of a less regular kind, and we may hope that we shall be met in the same spirit on the next occasion. But, of course, it will be recognised that it is useless for us to talk about using an Intelligence Department and a Mobilisation Department without being prepared at the same time to put at the disposal of the military authorities the force which they consider necessary to operate in various countries.

21819. (Sir George Taubman-Goldie.) Or upon being able to operate without it?—Quite.

21820. That is taking as your basis that there will be no help?—You cannot include in your calculations troops about whom there is a doubt, that is the difficulty.

21821. (Lord Strathcona and Mount Royal.) You cannot count on those from the Colonies in any certain numbers?—That is understood. I make no complaint of the decision, only it makes it necessary for the Mother Country to provide for all these questions, especially in regard to operations in some countries from which we are more remote than our Colonies. It complicates the arrangements. It is possible that at the last moment we might have most valuable assistance proffered us and that the plans we were making were unnecessary; but we must make the plans.

21822. In the meantime it must be gratifying to find that in some Colonies, say Canada, they are taking measures for increasing and more thoroughly training the number of their Volunteer Militia very considerably, and having depôts in different parts of the country?—I am sure very good progress is being made in many places. On the other hand, a "bird in the hand" is an old adage.

21823. (Chairman.) I think the next point you mention is as regards contracts. Are you satisfied with the present

system, or do you think it possible to decentralise further? —I think taking it all in all the Central Contracts Department has come out very well during the War. My object in decentralising contracts would be twofold so far as it can be done. The first reason would be in order to get rid of as much as possible of these references to the War Office in matters which are not necessary, but the second is to train the officers who will have to make the contracts in time of war. When the history of the South African War is fully written, I think it will be found that most of the mistakes which have been made about contracts have been made upon the spot; and if they had been made upon the spot it is chiefly because the officers have been called upon to do a work which it is very difficult for them to learn in time of war. Years ago I persuaded the then Secretary of State to allow Aldershot to make a number of its own contracts. We found sometimes it meant that they were buying in the same markets that we were; but at all events officers got the experience. Personally, I am favourable to all small contracts being done as locally as possible; to take one instance we never interfere with canteens, all that is done regimentally, and officers get a certain experience out of it. But there has been an inquiry, as the Commission are aware, into contracts both during the War and also by the Dawkins Committee, and I generally adopt the view taken by both those inquiries.

21824. (Sir George Taubman-Goldie.) Do you intend to utilise the Army Pay Department more in that way during war time?—I have constantly tried to make more use of the Army Pay Department. It is a very difficult thing to do, because the officers in the Department at present are only trained to disburse money and to account; and if you want to have a trained financial staff at the disposal of the General Officer Commanding, I am disposed to think that on the whole it will have to come in connection with the trained civilian staff which now does the audit.

21825. That would be for the Commander-in-Chief in the field and the headquarters; but generals of divisions and generals of brigades and commanders of columns want men with them who have had some experience of buying and making contracts. You could not have the financial experts with them. Would you not have to rely upon the Army Pay Department to some extent, or some corresponding body?—It would be a very valuable experience for them, but I do not think it can be properly carried out unless we can in some way amalgamate the Army Pay Department with the Finance Department, and I have found that is a very thorny subject upon which I have embarked, and been shipwrecked more than once.

21826. (Chairman.) We have had this expression of *See Q. 218.* opinion given to us: "There is a marked want of financial assistance to generals in the field, which, if it were met by the appointment of competent military financial advisers on the staff, would result, I am sure, in a more efficient and economical expenditure of the public money supplied." That was from Lord Kitchener?—I think there is no doubt the experience of the War shows that general officers ought to have some financial assistants, and I think it would be possible. We have already sent an audit office, a branch of our audit office, to Salisbury Plain, to Aldershot, and to Ireland, and I think it is probable that if the Aldershot Army Corps went on active service, or any considerable portion of it, the General Officer would wish to take that staff with him to assist him. You cannot send a whole staff of auditors into the field, but you might at all events make them available for his guidance and assistance.

21827. I think the point raised before us was whether that delegation of the audit staff was quite the thing that was meant. This is more an officer who would be on the general staff as a financial adviser?—The present Auditor is in a sense his financial adviser, and is so used, and I am only awaiting the experience of this delegation. If it turns out that it only means that Sir Evelyn Wood sends his accounts into the office at Salisbury, and has them reviewed there more rapidly than in London, then we would gain something; but we should gain a great deal more, I think, if it is found out that before Sir Evelyn Wood authorised expenditure, he (as he probably does) went into the next office the next door or sent an officer in and said, "What will be the effect of this financially?" and reviewed the thing. In that case he would use the

*The Right
Hon. St. John
Brodrick,
M.P.*

1 May 1903.

Auditor as financial adviser, and in that case I think we shall gain very largely.

21828. Are those auditors civilians?—Yes, and they were wished to be civilians. I consulted the military authorities repeatedly about it, and they wished it; and, what is more, in two cases I sent the civilians that were asked for by the Army Corps Commanders in command to take charge.

21829. (*Sir Henry Norman.*) I gather from what you say that you do not think the training of the Army Pay Department is sufficient to qualify an officer to become a financial adviser to the General Officer Commanding in the field?—I do not think they have the training which qualifies them. They disburse money and they account for it, but they have no training in making contracts or in the higher work, and principles which underlie the whole thing, and I think they would have to have a regular training and go through other branches in the War Office.

21830. (*Chairman.*) I think some witnesses carried that still further, and said that the financial adviser ought to be a military officer for that reason, that the crux of the matter was to train military officers in finance?—I see no difficulty whatever in the financial adviser being an officer if he is trained. For instance, I think the training of the Quartermaster-General's Department, if it was supplemented by some financial training, would be very useful.

21831. Then, with regard to remounts, I do not know that we need trouble you with any details on that subject, except as to what is to be done for the future?—With regard to the future we have made far better arrangements for purchasing, we have made what I hope will be a complete arrangement as to information; we have formed, or are forming, in time of peace, a nucleus of Remount Establishments which, after the experience of the War, it will not occur in future to any general officer to treat as mere depôts from which you can draft specially efficient officers to commands in the field. The Remount officers would have to remain doing remount work, recognising that it is very important work. I think all that is being now properly organised. But, of course, the fact remains that, if at any time we were again called upon to raise a supply of 2,500 a year to 250,000 a year, it must cause a very great strain, and a certain number of animals will be sent which ought not to be sent; but I think really that what we have gained most during the war is not only experience in buying and as to the places where we can purchase, but in the utilisation of horses when they arrive. You may have noticed that even as late as last March (March of last year), in Lord Downe's Report which was presented to Parliament, it was found that a great many officers then in South Africa did not even then know that Lord Kitchener had issued order that no horses were to go to the front until after they had been landed a month. No Remount Department in the world can provide against that sort of thing. If, when we had already got 40,000 horses waiting to go up in South Africa which had been got into condition, horses were being sent past them straight from the base the moment they landed, of course the old evils went on at once. Therefore I do not think that the reorganisation of the Remount Department depend only on the changes which will be made for the provision and purchase and care of horses at home, but especially on the care of them and the administration of them on a campaign. And we propose to make these Remount posts tenable for a definite time, so that there shall be no question of withdrawing an officer who is responsible.

21832. And would the staff be sufficient to provide for these officers on service in the field?—I think that the staff, as we propose to organise it, will be sufficient so far as we can go with due regard to expense, but the Commission will realise that we may not have another war for a very long period, and if we were to keep a very large number of officers kicking their heels we should find that the best class of officer would not take the post, and the public would soon weary of it.

21833. Undoubtedly it must be a system that is capable of expansion?—Yes.

21834. I think, so far, we only had it from Sir Charles Mansfield Clarke as a scheme he mentioned to us as probable; it was not passed at that time. Has it been

adopted since?—Sir Charles Mansfield Clarke I think gave his evidence in October, and the decisions about the Remount Department have been taken since then. They were explained by Lord Stanley in the House of Commons I think in the month of March.

21835. I mean is the new system actually in operation now?—It has just been put into operation; the appointments have been considered for the different positions, and it will really actively come into operation when the successor to General Truman takes office. General Truman retires in a month or two's time, he having reached the limit of age, and we thought that the most convenient time to start a new system.

21836. (*Lord Strathcona and Mount Royal.*) Is there still a registration of horses in the United Kingdom?—Registration we shall certainly continue as we did before.

21837-8. We had evidence from an Indian officer that there the horses are all furnished through large contractors, who take all the risks; they deliver the horses to the forces in India, and if any are found unsuitable it is their risk and their loss?—Those are Australian horses.

21839. (*Chairman.*) The only other point you have noted here is about ranges and manœuvring grounds; can you tell us anything about any steps that have been taken with regard to that?—We have, I think, made a very considerable step forward in the last seven years. We have bought Salisbury Plain; we have now a considerable tract of land in Scotland, which will, we hope, be largely added to; we have increased our training ground in Ireland, and we have obtained manœuvring rights over a certain amount of land in the North-Eastern District, and I want more at Aldershot. But in all these cases the increased range of rifles and the increased extension of forces makes training very difficult. There is no doubt that they are utilising Salisbury Plain to the full. I do not know what we would have done if we had not got it at the time we did. We have brought troubles on our own back by requiring or authorising more shooting among all classes of soldiers. We have provided ammunition for the Cavalry to fire 200 rounds instead of 150, and the Infantry 300 instead of 200, and there is more shooting for all classes. That, of course, means more ranges, and ranges are one of the most difficult things to deal with.

21840. (*Sir George Taubman-Goldie.*) How do you mean that you have brought trouble upon your back?—Because some of the existing ranges are being used to the fullest extent, and we have to find more. If you multiply the number of Volunteers by so many you must help them to more ranges. As a matter of fact, very large sums of money have been spent; we have spent since October, 1899, nearly £400,000 on ranges and we have got to spend nearly £500,000 more. Fortunately, long before the War we had been acquiring ranges and manœuvring grounds to a very large extent. When I say that I mean training ground, not manœuvring ground. Manœuvring can only be done by taking large tracts of country under the Manœuvres Act. As the Commission knows there are considerable drawbacks to that in this country, but, on the whole, I think we have been fairly met by Parliament.

21841. Is there anything else you would like to add?—I think not.

21842. (*Sir John Hopkins.*) I should like to put one question to you. We have had it in evidence that the mobilisation of the troops rather suffered from those concerned not being able to put their hands on a certain amount of money to prepare them for the place to which they were going. General Stopford told us, for instance, that the forces might have been mobilised more quickly if the money had been forthcoming when the order for preparation for mobilisation was given, and he rather points that out as a defect. I will read you what he said. He is asked: "But your point is that you gave warning, at any rate on 5th August, that unless the expenditure was sanctioned there would be delay?" And his answer is: "Yes, and my point, as I put it later on, is that this is inherent to mobilisation for service abroad, when special equipment has to be provided." Then he goes on to point out that the essence of mobilisation is to make that preparation, but to make that preparation you must "know exactly how to act and also that the equipment, etcetera, should be forthcoming." I merely ask you that because it may

See Q.

direct your attention to that point?—I think a greater amount of such stores ought to be, and would be under General Brackenbury's existing scheme now, in readiness. As regards the remainder, I quite agree; but in my opinion delays in mobilisation are not due in the least to any defect in our system of calling out the Reserves by a Proclamation by Parliament. We can in any case provide our troops and get them together quicker than we can convey them across the ocean. No Admiralty can have transports all ready waiting for years together; they require a few days to fit. But I think the greatest difficulty will always be in providing and giving the orders beforehand, outside the Estimate for the year. The same political reason which prevents the Government from issuing a Proclamation to call out the Reserves also prevents their taking a credit for money. I think it is a question which might well be considered whether, if it is constitutionally possible, it should not be in the power of the Chancellor of the Exchequer, with a view to any emergency, to give some special credit with a covering sanction from Parliament within three months or something of that kind.

21843. It was pointed out elsewhere in two or three directions that the absence of this money when the order was given to prepare for mobilisation hampered the movement. For instance, it was stated they had to buy horses and boots, and things of that kind, and that they were also short of equipment in some cases, because there was no money?—That is true, but you will readily see that if you had once begun buying horses you would have advertised in this case to Mr. Kruger exactly what you are doing.

21844. (*Sir John Jackson.*) Were you Secretary of State at the time when Lord Roberts went out?—No, Lord Roberts went out when Lord Lansdowne was Secretary of State, and I was appointed in the middle of November, 1900, when Lord Roberts was about to leave South Africa to come home. He left about three weeks afterwards. Lord Wolseley was Commander-in-Chief for a fortnight, and then there was an interregnum for a month.

21845. The question I was going to put was, before Lord Roberts went out were there any important communications discussed between him, the Commander-in-Chief, and the Secretary of State? Would it be the usual thing that there would be?—I was not at the War Office

at the time, but in point of fact I happened to be at a meeting at which the present Prime Minister was, at which I heard Lord Roberts discuss a variety of plans very closely.

21846. And it would be the usual thing of course before a General went out?—I should think, certainly. If I were Secretary of State at the opening of a war I should hope the General would confide to me pretty generally what he intended to do, because it would enable me to assist him much more efficiently.

21847. We have had it in evidence, I think, that when General Buller went out nothing of that kind was done?—I have seen General Buller's evidence and I have seen Lord Wolseley's evidence. General Buller had access to every department of the War Office, and was so well known there and had so great authority there that I think it was assumed on all hands that he had had access to every document and to everything he desired to see.

21848. And if he had wished to have had his plans discussed with the Commander-in-Chief and the Secretary of State he would not have had any difficulty in bringing such a discussion about?—I cannot imagine any difficulty. I think the only feeling which would have actuated the Secretary of State in the matter would have been the desire not to hamper General Buller by appearing in any way to interfere with him.

21849. (*Chairman.*) But as a matter of fact there were no written instructions for any of the generals?—No. I do not know how far it would be usual to give written instructions, but I think it would be most desirable in the event of any campaign that any General with an independent command should go out with the fullest possible plans or schemes.

21850. In writing?—In writing, which the Intelligence Department might have drawn up of the country he was going to engage in.

21851. (*Sir John Jackson.*) Allow him a free hand when he got out as to a change of operations?—Yes entirely.

21852. (*Sir Henry Norman.*) Still having a general knowledge of the policy which the Government desired him to adopt?—I think he should have the fullest general knowledge, and I think that knowledge ought to be, not merely from his military chiefs, but from the members of the Cabinet as well.

FIFTY-FIFTH DAY.

Wednesday, 10th June 1903.

PRESENT :

The Right Hon. The Earl of ELGIN AND KINCARDINE, K.G., G.C.S.I., G.C.I.E. (*Chairman.*)

The Right Hon. The Viscount ESHER, K.C.B., K.C.V.O.
The Right Hon. The Lord STRATHCONA AND MOUNT
ROYAL, G.C.M.G.

The Right Hon. Sir GEORGE DASHWOOD TAUBMAN-
GOLDIE, K.C.M.G.

Field Marshal Sir HENRY WYLIE NORMAN, G.C.B.,
G.C.M.G., C.I.E.

The Hon. Sir FREDERICK MATTHEW DARLEY, G.C.M.G.

Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.

Sir JOHN EDGE.

Sir JOHN JACKSON.

BERNARD H. HOLLAND, Esq. (*Secretary.*)

Major-General R. G. KEKEWICH, C.B., called and examined.

21853. (*Chairman.*) You have submitted to us a *précis* of your evidence, and it might be convenient to put it on the record of evidence as your first answer?—The following is a *précis* of the evidence prepared by me:—

1. Details of the preparations made, and steps taken to defend Kimberley, will be found in my despatch dated Kimberley, 15th February, 1899 (date of termination of the siege), published in "London Gazette," dated 8th May, 1900 (*Vide Appendix, page 668, post*). Paragraphs 1 to 37 appear to give most of the information required, but the following may be of use.

2. On 11th September, 1899, I was informed I was

to go to Kimberley, and I had a long interview with the High Commissioner. His Excellency informed me that Major Scott-Turner, Captain O'Meara, and Lieutenant McInnes had been for some time at Kimberley in connection with the defence arrangements, and that Commissioner Robinson, of the Cape Police, was in command there.

The High Commissioner wished me to inquire carefully into the arrangements already made and suggested for the defence of Kimberley the frontier and communications, and that if I thought they offered reasonable security against danger immediately apparent, he would be glad to let matters rest undisturbed

*The Right
Hon. St. John
Brodrick,
M.P.*

1 May 1903.

*Major-
General
R. G.
Kekewich,
C.B.*

Major-General
R. G.
Kekewich,
C.B.

If, on the other hand, there was any serious risk involved either to Kimberley or to communications between Orange River and Mafeking, by a continuance of the state of things as they then existed, I was to report accordingly.

10 June 1903. For political and other reasons I was informed that my mission was to be kept strictly confidential, and that any inquiries I made were to be conducted as secretly as possible.

3. Owing to reports as to the enemy's movements, I considered it advisable, soon after my arrival in Kimberley, to recommend strongly that troops should at once be sent up, and on 20th September the Imperial troops, as detailed in paragraph 6 of my despatch, arrived.

4. Until communication was cut off, the necessity of sending up guns, arms, ammunition, etc., was often represented.

5. For political and other reasons the organisation of the Town Guard had to be most secretly dealt with, but every effort was made to get all details of the work well forward, so that immediately authority was received for its formation the scheme prepared was brought rapidly into operation. Every endeavour was also made, not only to increase the efficiency of the Kimberley Regiment (Volunteers) and Diamonds Field Horse (Volunteers), but also to increase their numbers.

A mounted regiment (Kimberley Light Horse) was formed later (*vide* paragraph 22 of my despatch), and this, together with the Cape Mounted Police and Detachment of 21 Mounted Infantry (Loyal North Lancashire Regiment) brought the mounted troops eventually up to about 864.

The strength of the Town Guard was only limited by the number of rifles available, the last detachment formed of it having to be armed with Sniders.

6. State showing the strength by corps on 26th November, 1899, is attached (*Vide next column*).

7. A detailed scheme of defence had been prepared, and on 11th October the garrison moved into the different sections of it.

The main line of defence round Kimberley consisted of a number of closed and open works constructed at suitable intervals. The existence of debris heaps much facilitated the choice of sites for the works referred to. The field of fire in front of the line of defence taken up was cleared, and some of the material thus obtained was utilised in the construction of a line of obstacles to fill up the gaps between the works.

The Premier mine was strongly held, being the source of the only pure water available for so large a population as that contained in Kimberley.

The debris heaps between Kimberley and the Premier mine were entrenched and garrisoned in order to make the communications between Kimberley and the Premier mine as secure as possible, with the numbers of men available for the defence of the diamond fields.

8. On 13th October issued orders to withdraw all rolling stock and engines from Vryburg and south to Kimberley, and this was successfully carried out that day.

9. De Beers Company and the merchants and dealers of Kimberley had, according to their usual custom, a large reserve of supplies at Kimberley. I endeavoured to arrange for an increase in the former (De Beers) before the siege commenced, but although the company had a large quantity "on order," and tried to assist in this matter, very little was, I think, actually received before communications were cut.

10. A rough stock of supplies in Kimberley was taken in September, and this was checked as soon as the siege commenced (15th October). A proclamation was issued under martial law fixing the maximum prices to be charged and the amounts that could be bought or sold for all absolute necessities of life, and regulating the proportions of Boer meal and flour of which all bread was to be made.

With the exception of meat, of which the price was slightly increased, all supplies had under this proclamation to be sold at the same prices as previous to communications being cut.

All licensed dealers were subsequently required to furnish complete statements of stocks of supplies in hand and of all bread stuffs, and these were bought from them at a cost of about £60,000.

In order to facilitate and regulate the distribution

and to minimise the chance of loss by fire, six depôts were formed in different parts of the town.

The ration and the quantity allowed to be purchased by individuals were settled, altered, and reduced as necessity required during the siege.

Towards the end of the siege nothing extra to the ration (which consisted of bread, meat, sugar, coffee, or tea) could be bought except as a medical comfort on the certificate of a medical officer. Milk, vegetables, and anti-scorbutics of any kind were particularly scarce. Horseflesh formed the principal portion of the small meat ration from early in January, 1900, to the end of the siege. At times, owing to the heavy shelling, there was great difficulty in arranging for the drawing of rations.

11. Searchlight signalling communication by night with the relief column was commenced on 28th November, 1899, and helio by day and night on 13th January, 1900.

12. From a rough census taken during the siege at a time when food supply permits were in force, there were in Kimberley and Beaconsfield about 48,000 individuals, of whom 18,000 were Europeans and 30,000 made up of races of varying colour. Out of this total population there were about 12,000 women and 10,000 children.

13. During the siege the number of shells fired by the enemy was about 8,500, and by us with our 7-pounders about 2,141.

14. The following, taken from the report of the Medical Officer of Health for Kimberley, gives information as to health, etc. :—

"During the first few weeks of those dreary 124 days (October 15th, 1899, to February 15th, 1900) during which we were besieged there was not more sickness than is usual at that time of the year, but from the middle of November onwards sickness rapidly increased, chiefly among the women and children and the natives of all ages, whilst the mortality rate became excessively high. The men in the forts and redoubts kept fairly well, in spite of their unusual trying work and scanty variety in the matter of rations; this was due largely to constantly living in the open air day and night, instead of life in an office or shop or close rooms; but we had many women and children—some 22,000—about 70 per cent. of whom were Europeans and Cape coloured, and among them there was much sickness, which caused a large number of deaths, especially among the children. Amongst the Europeans infants died at the rate of about 500 per thousand, or about half of those born; amongst the coloured races the death rate (935 per thousand born), had it continued, would have meant total extinction of those born in 1899.

"The number of deaths from all causes in each of these four months was 133, 302, 585, and 609 respectively, giving a total of 1,629, which almost equals the number of deaths in a complete year in ordinary times.

"The most serious disease we had to contend with during the siege was scurvy; this was, however, almost entirely limited to the native population. Only two or three decided cases, which incapacitated them, occurred amongst Europeans.

"We had no less than 483 fatal cases out of about 1,500 known cases of this disease, or, in other words, a mortality rate of about 30 per cent."

R. G. KEKEWICH, Major-General

Commanding in Kimberley during the siege.
31st May, 1903.

The following are my replies to the points raised in the Memorandum (*Vide Appendix, page 575, post*), which was sent to me by the Secretary to the Commission.

1. After the relief of Kimberley I commanded my battalion (1st Loyal North Lancashire Regiment), which formed part of the 9th Brigade, 1st Division.

On Major-General C. W. H. Douglas being invalided to England in December, 1900, I was appointed to command his column, but I only did so for about three weeks, as I was admitted to hospital—the result of an accident owing to my horse falling with me.

On discharge from hospital I was placed in command of a section of the lines of communications, and in July, 1901, I was appointed to the command of a mobile column which operated in the Western Transvaal, and which I held until February, 1902, from which date I commanded a mobile force until the end of the war.

2. With reference to paragraph 1 of the memorandum, I consider the number of troops in the Western Transvaal during the time I held a command until within a few months of the termination of the war inadequate.

I conclude the starving of this district in the matter of troops was considered necessary, as they were required for more important work elsewhere.

3. With reference to paragraph 2:—

I consider the shooting of our men was, as a rule, very indifferent, and that the Boers were better at snapshots and short ranges. The necessity of a better system of training men in shooting was most strongly brought out by the war.

4. I consider the marching of the infantry, and often under scanty rations, was magnificent.

5. Physique will not, in my opinion, be of the highest standard until the pay is increased.

The second contingent of Imperial Yeomanry were in many cases very bad riders, and had little knowledge of horsemanship.

6. I consider the training of officers, as carried out at the Staff College, produces, as a rule, excellent staff officers. I cannot speak too highly of the qualifications and work of those Staff College officers who have been with me during the war. I think that many more officers should be passed through the Staff College.

7. Supplies were, as a rule, sufficient, and the quality of them excellent.

Bad pattern pouches and bandoliers led to a great waste of ammunition.

There was a great difficulty in obtaining soap in the early part of the war, which caused much discomfort to the men.

8. I am most strongly of opinion that as many men

72C.

as possible in every battalion should be trained as mounted infantry, also that there should be a distinct cadre of mounted infantry kept up in peace time, and always available.

The value of a force of men of this kind, who are good shots and good riders, cannot be over-estimated, and such a force would be available to relieve the cavalry, when required, in many ways.

9. The Remount Department could never keep pace with the demand for horses, and in consequence horses were not kept sufficiently long at the depôts to get them fit for the hard work in the field, where they were underfed, had to carry excessive weights of saddlery, equipment, etc., and often bad riders.

10. I think that to get the best value out of all irregular corps it is very important that regular officers should command, and that the staff and at least one non-commissioned officer per squadron should be regulars.

11. I think there should be more officers, and that the pay of the junior ranks should be greatly increased.

I lay great stress on the value of the officer, and his leading, zeal, and influence were generally of a very high order.

Owing to the wear and tear of war, and to many officers being required with irregular corps and for other duties, such as commandants, commissariat and transport, etc., the numbers of officers with regiments were often reduced far below what was necessary for efficiency.

12. I consider *esprit de corps* and discipline of very great importance, and that corps possessing these have great advantage over those who have not.

13. The war has brought out most strongly the necessity of training all in peace time for the work they will have to do in war. My experience is that, owing to want of suitable ground at almost all home and many foreign stations, troops cannot be properly trained for active service.

The difficulties of training under these circumstances (generally over the same small piece of ground) takes the heart out of officers and non-commissioned officers. It is hardly reasonable to expect good results and the interest to be kept up unless suitable ground for all tactical training is in some way made available.

It seems likely that the men will at last be available, but to bring about the best results and to develop the qualities required in all ranks, such as individual intelligence and initiative, it is, in my opinion, absolutely necessary that suitable training ground should be available.

The importance of this cannot, I think, be over-estimated.

R. G. KEKEWICH, Major-General.

31st May, 1903.

21854. You were in South Africa before the outbreak of war, I think?—Yes, for some months.

21855. In command of your regiment?—Yes, in command of my regiment at Cape Town.

21856. It was not until the 11th September, 1899, that you were consulted about the defence of Kimberley?—On that day the High Commissioner sent for me and told me the general situation. He was not very satisfied with the arrangements really under the Police Commissioner; he did not think them satisfactory. The Police Commissioner, of course, was a Cape Government official.

21857. And he was in charge of the place at the time?—He was really in charge of the place, the senior officer up there, and the High Commissioner was not very satisfied; he wanted to leave matters alone if he possibly could, but he did not want them to drift into a dangerous state. I had confidentially to explain certain things to Commissioner Robinson about his interest being Imperial, and that kind of thing; my mission up there was very confidential. I was not originally sent up in command, it developed into that afterwards.

21858. There was a scheme of defence though before you went up?—Yes, I did not know much about that then; in fact, I was sent for and left a few hours afterwards, but I had a long interview with the High Commissioner, and was handed certain papers about the defence. The scheme had been originally prepared by

10 June 1903.

Colonel Trotter for the defence of Kimberley, but, of course, that was not eventually entirely acted upon, parts of it were and parts not.

21859. It was a groundwork?—It was a groundwork, and there had been different officers up there. Lieutenant McInnes, of the Engineers, had been sent up also further to elaborate and work it out.

21860. And he remained there?—Yes; I think Major Scott-Turner got there early in July, and Lieutenant McInnes, I should say, in August.

21861. You went up somewhat on a confidential mission in September?—Yes, it was entirely confidential. I, as it were, sneaked into Kimberley, and was kept there as a sort of secret agent for two or three days, but things developed so quickly. As the situation appeared to me, from everything it was perfectly clear that they meant business. I reported it at once, upon which they sent up all Imperial troops that they could spare.

21862. And then you assumed command?—Then I was appointed to command in Griqualand West and Bechuanaland.

21863. I see you sent reports almost immediately after your arrival in Kimberley that troops were necessary, and troops were sent up on the 20th of September?—Yes.

21864. That is only nine days after you were first summoned by the High Commissioner?—That is it. Of course, I reported at once that the situation was very unsatisfactory, no steps had been taken to protect the bridges or to do anything of that kind. Of course, the Orange River Bridge at that time, if it had gone, would have been a most serious matter for the whole colony and the whole country.

21865. Was that under the Police Commissioner?—Everything of that kind was, but nothing was being done at all. I then had to make arrangements with him to pretend to paint it, and things of that kind, in order to get a guard over it, and watch it, because at any time it might have been blown up, and that would have upset everything.

21866. What force had the Police Commissioner at his disposal before you came up?—I cannot say for certain, but I should think, between Mafeking and Orange River, about 600.

21867. Police?—Yes, echeloned along at small posts. I really would not be certain about those figures, but I could get them.

21868. Were most of those gathered into Kimberley afterwards?—A great many of them were.

21869. (Sir George Taubman-Goldie.) Did those police include the Dutch race as well as British?—Oh, yes, and it was a very serious thing that it did.

21870. What proportion of them, should you say, were Dutch?—I could not say; for a long time the Cape Government had been working the Dutch element into it, and no doubt the bad way in which the Cape Police behaved in the early part of the war was owing a great deal to that; they crumpled up entirely everywhere. I do not mean to say they fought badly when they got into Kimberley; when we got them together I think they fought very well, but all the posts that I had arranged for north of Kimberley—four distinct posts with from 100 to 150 men at each place—practically came into Kimberley without firing a shot. At Fourteen Streams Bridge, where they had a most elaborate defence, and everything of that kind, they simply crumpled up and retired into Kimberley. I think that was a great deal owing to this Dutch element in the Cape Police.

21871. (Chairman.) What was the Kimberley regiment?—It was a regiment of volunteers that developed into a good regiment.

21872. Was it in existence before?—Yes.

21873. And would have been at the disposal of the Police Commissioner?—Yes, it was at the disposal of the Police Commissioner until I took over the command.

21874. Was it embodied?—It was embodied subsequently.

21875. But not before you came?—No, nothing was done; everything was kept very quiet as to any embodiment or anything; one dare not talk about it.

21876. And the Diamond Fields Horse?—The Diamond Fields Artillery is a part of the Kimberley

regiment; it is the artillery portion of the Kimberley regiment of volunteers.

21877. It was not embodied either?—That was not embodied either until later.

21878. And the Town Guard was the other body?—The Town Guard was, of course, a force entirely raised out of local people.

21879. For the siege?—For the siege.

21880. It had no organisation practically beforehand?—No, we had to arrange it all secretly. I can give you the papers about all that, showing how it originally stood.

21881. Later there was a mounted regiment of Kimberley Light Horse?—Yes, I think there were only 21 or 22 mounted infantry sent up to Kimberley, and, of course, that number with a perimeter of nearly 12 miles was positively dangerous and ludicrous, and in the town itself I had to raise a mounted corps, for which the Governor, Lord Milner, gave me authority.

21882. You have given us a statement showing the state of the garrison on the 26th of November, which brings out a grand total of 220 officers and 4,501 men?—Yes. I am sorry to say I could not find amongst my papers any other state. I hope that is a correct statement, but it is only out of my private diary. I took the 26th of November as it was the only state I could find. That gives a very fair estimate, but, of course, it was varying from day to day.

21883. The Cape Police is put down at 327 men and 18 officers, besides the small detachment of artillery?—Yes, you see the Taungs detachment of Cape Police got back into Mafeking; I arranged that with Colonel Baden-Powell, when things were becoming very dangerous; there was no use leaving them out, and I let him take them back; he was anxious to get them, and I really did not think there was much chance of their reaching me, and I let him have them.

21884. That is not included in the 327?—No; when I said before 600 I was only guessing at it; but I should think it was about 600. It had been represented over and over again by Commissioner Robinson that he wanted more Cape Police, and more war arrangements. He had been very loyal and staunch about all arrangements.

21885. Did that show all he had at his disposal at the time?—Yes.

21886. Could he have done very much with so small a force?—Not, of course, against any serious attack; the danger was that they might try to rush Kimberley in some sort of way.

21887. It was on the 11th October that you took up the different sections of the line of defence?—Yes.

21888. Would you like to state the main lines of it?—I did state it somewhere in my summary; I do not think I can state it better than that. I refer to paragraph 7 of the *précis* printed at the beginning of my evidence.

21889. That you consider was the best line of defence that was available under the whole circumstances?—Yes; of course it was an enormous perimeter, and it extended really, if you take in Beaconsfield, 11½ miles round. Of course, if you work it out in any scheme of defence lines according to the numbers you are supposed to have, it is a very small garrison. It was also very difficult to arrange to have a sufficient reserve to reinforce at any threatened point.

21890. How do you account for your being able to hold it then?—I think that the great thing was keeping them perpetually on the move. I kept on sortieing at them, making reconnaissances in force, and that kind of thing, and they did not know where and when these were coming off. They never made any serious attack on Kimberley. Of course, they got our daily paper every day, we knew that; it went out at night, and I used to publish in it information about mines, and cautioning the inhabitants in different parts as to their danger, and things like that; all kinds of ruses to deceive them went out in the paper. There were many enemy's sympathisers in the town; not so many as I daresay there were in many other towns, but so many that there was daily communication with the Boers outside, and it was impossible to stop it.

21891. That rendered them less anxious to come on?—Yes. I tried to retain as many as I could round the town, but also to prevent them from attacking.

21892. But I suppose the Boers were not so anxious

to attack throughout the war, were they?—Not at all, I think.

21983. What would have happened if you had had to deal with another enemy?—If they had been English troops they would have been into us in no time.

21894. You speak of the supplies; you were able to make some arrangements with the De Beers Company and the merchants?—You see, everything I had to do had to be done in the most confidential and secret manner. I only really dealt with the general manager of De Beers in those days and with the secretary. Mr. Rhodes had not come up in the early days, and although I think a large number of supplies were on order from King Williams Town and Port Elizabeth, and places like that, I do not believe they arrived in Kimberley before the siege, but it happened to be the season of the year when there was a large amount of grain in the town; there always is at that season of the year.

21895. You say you had to act very confidentially; can you speak more precisely of that now?—Well, of course, I could not speak a word to anybody; I had to go about as a sort of secret agent; we did not want in any kind of way to influence the war or political action about that time, and everything had to be kept exceedingly secret.

21896. Do you mean that any action in the way of preparing for a war would have led to a war?—Yes.

21897. That was the feeling at the moment?—Yes, that was according to my orders; everything had to be absolutely secret.

21898. In order that the Boers should not imagine that a war was being prepared?—Quite so.

21999. It was more with a view to the enemy than to any sympathy with the enemy on our side of the border?—Yes, it was with a view to the enemy, and owing to political events then; they did not want in any way to influence them. Paragraph No. 10 of my *précis* of evidence states the arrangements I made about the supplies.

21900. It states: "The ration and the quantity allowed to be purchased by individuals were settled, altered, and reduced as necessity required during the siege." Does that mean that they were on very short rations by the end of the siege?—Yes, I think it was five-eighths of a pound of bread—indifferent bread, because we had not the proper quantity of flour in it; we had to make our bread according to an ordered proportion of breadstuffs—and about a quarter of a pound of horse flesh was the meat ration at the end.

21901. And that applied to the whole population, civil, and military?—No, the military always had a better ration, the actual fighting men; I always arranged that the military had an increased ration, because it was so important to keep up their strength for fighting. I do not know that it was ever known in the town, but it was so. I never heard it cavilled at in any way.

21902. There was no movement in consequence?—No; most of the defenders were actually inhabitants themselves.

21903. Meat was scarce?—Very scarce.

21904. And it was chiefly horse flesh?—Yes; I think I gave the exact date in my *précis*, but early in January we first took horse flesh into use.

21905. Does that mean that the whole cattle had been consumed by that time?—There were a few cattle left, and a certain number of milch cows, but, of course, milk was our greatest difficulty; nearly all infants died, and we dared not slaughter the milch cows.

21906. At the end of the paragraph there is a sentence I should like to ask a question upon: "At times, owing to the heavy shelling, there was great difficulty in arranging for the drawing of rations"?—You see the actual meat dépôt was in the centre of the town by the Town Hall, and, of course, it had to be issued at certain hours, and people really preferred to stop in their bomb-proof shelters to coming and drawing their rations, as it entailed great danger.

21907. They were in danger, but does the paragraph in the despatch of the 20th March, paragraph 2, state the full number of casualties?—I think so.

21908. It says this, "The casualties during the period above referred to" (that is the period from the 13th September, 1899, to 15th February, 1900), "together with those of the 16th February, appear to have amounted to two officers killed and 12 wounded, and 34

non-commissioned officers and men killed and 97 wounded. In addition, four Europeans and one native of the civil community were killed, and 16 Europeans and eight natives wounded during the bombardment." Is that the total loss during the whole siege?—I think so.

21909. Because it sounds rather a small loss if you had to carry out even the giving out of rations under a heavy bombardment?—Well, you see they seemed to throw their shells with mathematical accuracy into nothing; an enormous number came into the town, but really there was a great deal more ground than persons, although there were over 50,000 people there, and one always imagined when each shell came in that there would be the most frightful loss of life; it was not so. It took about 900 shells to kill a person, and four hundred and something of that kind to wound anybody during the siege.

21910. You had a very large native population, had you not?—Very large; the total population of the town, natives, and Europeans, began at about 54,000.

21911. I should have thought the natives would have been difficult to keep under cover?—The natives in these places are a great deal under control; they are in locations, those not employed at the different mines. Those employed at the De Beers Company were in compounds, and they were never released. There was a danger of a shell falling into the compound where a lot of men were crowded together, but we tried to keep them separate as much as possible, so as not to have any big loss.

21912. I see that in paragraph 12 you give the number: "There were in Kimberley and Beaconsfield about 48,000, of whom 18,000 were Europeans, and 30,000 made up of races of varying colour. Out of this total population there were about 12,000 women and 10,000 children." Was this failure of the Boer shell from ineffective fire or from any defect in the shell itself?—Well, the shrapnel which they fired burst very high, and they really only dropped on the town, and the ground all round these *debris* heaps (the stuff that is worked up out of the mines) had a wonderful control over the shells, they pitched into it and there was no harm done, they were controlled at once.

21913. They buried themselves?—Yes.

21914. Did the shells burst well, do you think?—The big gun, the 94-pounder, did very well, but I think most of the others did not burst well.

21915. We heard that at the beginning of the war at any rate the fuses were defective?—They were not well timed, I think, and were generally defective.

21916. You calculate that there were 8,500 shells fired into the town?—Yes; it was rather difficult to get exact numbers all round the town, but I found a note in my diary, and put that in as the amount in my summary.

21917. And your own shells were 2,141 in number?—Yes, they were 7-pounders, very little guns, quite outranged by the Boer guns, of course.

21918. You had nothing bigger?—Nothing bigger.

21919. (*Sir Frederick Darley*.) What was the range of the 7-pounders?—I suppose the effective range would be about 2,500 yards, but we used to pitch them as far as 4,500, but that is very inaccurate fire. They were quite useless guns for defence purposes.

21920. (*Chairman*.) I suppose you would also call attention to the report of the medical officer of health, given in the fourteenth paragraph of your *précis*?—Yes, and I have got the original here if you would like it.

21921. This is all you consider material?—Yes.

21922. The most serious disease was scurvy I notice?—Yes.

21923. And the mortality did increase very much during the siege?—Yes, in the four months they had as much mortality as they usually had in a whole year.

21924. There is nothing you wish to add to that?—No, I think not.

21925. Is there anything else with regard to the siege that you would like to mention? You have referred us also to the despatch?—Yes, I have put everything in that, and I thought I had better refer to it, and I supplemented it by this report. I had not very much to go upon; I had only my private diary; I could not get hold of any of the official papers until too late.

Major-General
R. G.
Kekewich,
C.B.

10 June 1903.

Major-General
R. G.
Kekewich,
C.B.

10 June 1903.

I got a few days ago a copy of the Official Diary, but I could not get my Intelligence Diary.

21926. (*Sir John Jackson.*) Where were the people buried who died during the siege?—Outside the town in the cemetery.

21927. (*Chairman.*) This is what you think is sufficient to put in?—I think it is quite sufficient.

21928. You have been good enough to give us some remarks upon the general memorandum?—Yes, of course, it is very difficult for me to speak with any strength as to the first part of it, because I went off to Kimberley, and half of my own regiment followed me up to Kimberley, and I really do not know anything about the condition of the troops that arrived in the early part of the war, and therefore I have omitted all reference to that.

21929. But after the relief of Kimberley you took command of your battalion again?—I did, and in the First Division, Lord Methuen's.

21930. On the western side?—On the western side. We started at Kimberley, and went across to Kroonstad, and eventually worked up north of the Vaal, and got into the Western Transvaal.

21931. And later you had command of a column?—Yes, and latterly a mobile force.

21932. You say that you consider the number of troops in the Western Transvaal while you were in command there was inadequate?—Quite, for any cornering of Boers.

21933. Did that have an effect upon your operations in the way of restricting them?—Very considerably; you cannot catch Boers without a great many columns, and even then they get through.

21934. What did your column do during that time?—We cleared the Magaliesberg, and did other work; we had a very serious attack at Moedwill, where they attacked my camp early in the morning, and I had heavy losses, but they got nothing. Then later in the war, quite late, in April, 1902, I had a biggish fight at a place called Rooival; that was just as the negotiations were going on.

21935. You were moving about all that time?—All over the country—Klerksdorp, Rustenberg, Ventersdorp, Lichtenberg, and all that district.

21936. The inadequacy of the troops meant that you could not act in combination to surround the Boers?—Yes, Lord Methuen was there too, but it is a very big district, and they could really play round you.

21937. That was probably because the troops were more wanted in some other part of the country?—I conclude that. I do not know what was in Lord Kitchener's mind about it, but it was not until Lord Methuen's reverse and the situation became very serious over there that they realised there were a good many Boers in that part of the country, and took the matter up seriously.

21938. As to the shooting of the men?—I think it was very indifferent.

21939. Do you mean both before and after the war? Did they improve during the war?—I had not much experience except of my own battalion, which was a good shooting battalion before the war, and during Kimberley there was very little chance of getting any idea as to that, but I have never seen any good shooting.

21940. A good many witnesses told us that it was very difficult to tell what the effect of the fire is?—Yes, but, of course, at Rooival, to give a sort of idea, there were as many as 1,800 Boers coming at us in very close formation, and I really do not know how many we killed. I have forgotten, but about 50, and they got to within 300 yards.

21941. (*Sir Henry Norman.*) Without any cover?—Practically; there was a certain amount of cover from ground, but they were coming on in close formation, and firing magazine fire off their horses—a regular roar.

21942. Did their fire produce much effect upon our men?—No, we had very few casualties at all, because it was really unaimed fire off horses, but it is the same kind of way in which I understand they succeeded against Lord Methuen and on other occasions, and they tried those tactics on again; but it shows how bad our fire must have been when they could get away with such a very small loss.

21943. (*Sir Frederick Darley.*) What was your force

composed of—regulars?—No, I had a mounted force in which was Scottish Horse and the 7th Battalion of Imperial Yeomanry; I had two columns made up of all kinds of irregulars. If I had had any English infantry probably then I should have got a good lot of them.

21944. (*Chairman.*) You are speaking more of the irregular troops?—Then, certainly.

21945. Do you consider that the English infantry shot better than the irregulars?—Yes, I say so, on the whole.

21946. Are you speaking of all irregulars, or do you draw a distinction between the Imperial Yeomanry, say, and the Colonials?—The Imperial Yeomanry were, as a rule, bad at shooting, I consider; I think the Colonials were better than they were.

21947. (*Lord Strathcona and Mount Royal.*) Which Colonials do you mean, the local Colonials or those from over-sea?—The over-sea I think were very good. In the early part of the war I saw a good deal of the 6th Imperial Bushmen and the 4th and 5th New Zealand, and these were all good fighting men, who knew their job well.

21948. (*Chairman.*) You say the Boers were better at snap shots at short ranges; does that mean that they were not better at long ranges?—I do not think they were better at long ranges; they are not accustomed to it, they had never done any long range practice.

21949. Where do you draw the line between short and long range: 500 yards?—I really forget; I would not like to answer that for certain, but it is laid down in the regulations.

21950. I wanted to know what you meant by the observation you made?—I meant they were much better at any sporting range—the range at which you would shoot a buck.

21951. A couple of hundred yards?—About 300 yards; they are very much better at that range, as I think they showed in the attacks; they bowled over a lot of our men in the final stage of an attack.

21952. When our men were attacking, and they were under cover?—Yes; I do not think our men would have bowled over so many of them under similar circumstances.

21953. You want a better system of training in shooting?—I think that is very important; more ammunition and a very much improved system of training.

21954. What do you say to the marching?—I think it was magnificent; quite wonderful.

21955. And the physique?—The physique was good.

21956. Of the infantry soldier?—Yes.

21957. But you say it will not be of the highest standard until the pay is increased?—I think that is so; I do not think we get the very best men.

21958. Are you speaking of the pay as it was at the time of the war?—Even now, I doubt if we shall get the very best men. I think we shall have to work up to the same amount of wages given for every kind of labour before we eventually get the very best men.

21959. But even with the pay as it stood you get men who could do the marching?—Oh, yes.

21960. And very severe marching?—Yes.

21961. Had you much to do with the second contingent of the Imperial Yeomanry?—I was commanding a sub-section on the lines of communication for some time, and during that time I saw a great many of them, and I had the 7th battalion of the Imperial Yeomanry under me for the last eight or nine months of the war; at times only portions of it, but still the battalion was the one that was feeding me with Yeomanry.

21962. We had a good deal of evidence about them, that they were not sent out in very good condition, but that they improved very much during the war?—Oh, yes, they improved with the training immensely.

21963. That would be your opinion of them?—Yes.

21964. As to the training of officers?—I do not know if I have said anything about them in my summary.

21965. You speak very highly of the Staff College?—Yes, that is what I think of the Staff College officers; I have the very highest opinion of them. I am not a Staff College officer myself, but I am sure the staff training of those that I have seen has been of the greatest help to me.

21966. That is for work on the Staff?—Yes.

Major-General
R. G.
Kekewich,
C.B.

10 June 1903.

21967. What about the training of officers for other duties?—For war purposes?

21968. Yes?—I think that wants to be carried out on the system they are trying to work now; they seem to me to be awake to the importance of that.

21969. You think as it stood at the time of the war it required expansion?—Oh, yes, very much.

21970. In what direction?—The officers never got any chance. I have seldom seen any chance of training officers properly in the whole of my service; no ground at all; they cannot have any natural aptitude for ground or anything of that kind, unless you have ground to train over, and we really never have ground.

21971. Larger manœuvring grounds?—Yes, and larger training grounds for even companies of infantry; the ground is now so cramped that it takes all the initiative and all the interest out of everybody. Something I think should be done with owners of property in this direction. There should be some big scheme or arrangement for getting leave to manœuvre over grounds. As it is now it takes the heart out of all, I think; you cannot work up any interest; you have to train at home recruit after recruit, very young boys, and to keep up a real interest in it and energy you want ground. I have seldom seen any ground except in India.

21972. You mean a place where the junior officers can get out of sight of the commanding officer?—Yes.

21973. And make mistakes if they like?—You train over a bit of ground probably with one hedge in it, or something of that kind, and the whole thing gets so cramped and small that no body can take any interest in it.

21974. Was your regiment complete with officers at the time of the war?—Yes, but it was broken up very much at different times; two companies here, two there, and three there, and that kind of thing, and, of course, that means that extra staff was required with these different detachments, and then owing to the wear and tear of war and hundreds of other causes, officers being required for all kinds of appointments, I think they run the thing very dangerously low in the case of officers. It always must work so in war.

21975. You became short of officers?—Yes, a great deal too short, I think, for efficiency.

21976. What officers did you get sent out to you? Were they very young men?—I only got officers in the usual course; some came to me from Yeomanry and Colonial corps and different ways of that kind, and officers in the usual way to fill death vacancies.

21977. But during the war there were a number of officers sent out above the ordinary supply, were there not?—Yes, but we were always short, because so many were taken away.

21978. You were always short?—Always short.

21979. You never had the full number?—Except just at the very beginning.

21980. And when you became short, when officers were called away for other purposes, did you report those vacancies as existing?—Yes, those were reported periodically in the states.

21981. Did anything follow upon that?—It is difficult to say; officers came along, but I contend that there are not nearly sufficient in a regiment.

21982. You mean there are not sufficient to begin with?—Not sufficient to begin with; the wear and tear of war requires so many officers to be taken away for every kind of thing.

21983. All that you have said means that the general supply of officers for the Army, as a whole, is deficient?—Yes; I think we have too few officers, particularly in war.

21984. That means that the regiments are depleted in order to supply men for the other services which emerge in war?—Yes, it is to an enormous extent; it is quite ridiculous how they work down to a state verging, I think, on inefficiency.

21985. (Sir Henry Norman.) Was not the number of officers withdrawn from the regiments in the war in South Africa quite abnormal, so many officers being taken away for various civil offices?—Yes; and, of course, it was an exceptionally long war. You will find that ridiculously small numbers were left for duty with the regiments; when the posts as commandants and other offices were filled, the numbers were, I think, dangerously low.

21986. But you do not think they would be withdrawn to the same extent as they were in South Africa in many other wars; the Town Commandants, for instance, were really to look after the civil population rather than troops?—Yes, and defences of course they had to work too—everything in connection with the place.

21987. (Sir Frederick Darley.) I suppose the more efficient the regiment the more likely its officers are to be withdrawn from it?—That is so; you have pitched on the very point I used to mention to Lord Methuen, that because I happened to have good officers they were taken away.

21988. (Sir John Edge.) When a General officer calls for officers from a regiment, does he select the officers, or does the Colonel select the officers he intends to send?—I think generally the Officer Commanding is consulted. I think they generally say, "I want an officer for such and such a thing; whom do you recommend?" and you talk it over, but you have to send one.

21989. In such a case, would you expect that the officer commanding the regiment would invariably send his best men?—I think you would talk it over. I should talk over with the General the pros and cons about that, and complain very much about taking my life blood away to supply other people.

21990. (Chairman.) You have not much to say about supplies?—No, I think they were marvellously good, taken on the whole.

21991. You would like to increase the mounted infantry?—Very much; I think any force having a large number of mounted infantry will have a great advantage in any war.

21992. Of course, the conditions in this war were specially in favour of that?—Yes.

21993. Do you think it would be the same in a war against regular troops?—I think so; I think unless you turn positions you will have enormous losses in frontal attacks.

21994. You can speak also as a regimental officer. Do not the regiments rather complain of the numbers of men taken from them?—Very much.

21995. What would be your remedy for that?—Regular cadres of mounted infantry at home.

21996. Independently of the regiments?—Oh, yes, formed as regular regiments of mounted infantry at home; I have said so in my summary.

21997. I did not gather that that was what you meant by your note here, but there are the two systems, one to make a force of mounted infantry independent of the infantry regiments, and another to train men belonging to the regiments as mounted infantry?—Yes, I would like a separate force also of trained men. I would train every infantry man, if I could, to ride.

21998. If you did that, would there be any necessity for an independent force also?—You see directly a war comes you lose all your good shots; it really comes to that; the mounted infantry must be good shots, men of good character, and men who can ride, and that kind of thing—in fact, all your best shots go straight away to mounted infantry. I never saw the mounted infantry of my battalion from the beginning of the war till the end; it went straight away from me, and I had to keep it supplied with drafts throughout the whole war. It never came near me once during the war.

21999. And that, you think, was against the interests of your regiment?—Certainly I think so, but not against the interests of the Service.

22000. (Sir Henry Norman.) You would keep up permanent battalions of mounted infantry in time of peace?—I certainly would.

22001. Do you think they would not deteriorate rather, or else try to become a sort of cavalry?—I do not know about deterioration; but I do not think the last alternative stated in your question matters very much myself; I think practically in war time they have got to do every duty that cavalry does.

22002. (Chairman.) Including a charge?—No.

22003. You make some remarks about the supply of horses?—Yes.

22004. You say there were not enough?—We never could get enough; the wear and tear when you are doing long night marches on short food, etc., is enormous. I think I got through in the last month of the war over 1,500 horses.

Major-
General
R. G.
Kekewich,
C.B.

10 June 1903.

22005. You mean they were done for?—They had to be sent into depôts, and were useless; they would come along again, but they were useless for the time.

22006. (Sir Frederick Darley.) How many men had you?—I had about 4,000 men under me then.

22007. (Chairman.) If a horse could have been sent from the beginning of the war into a dépôt when it was worked out in the way you describe, that would have increased the number of effective horses, would it not?—In the field?

22008. Yes?—Of course, I was never quartered at Johannesburg, and I cannot say how the thing was worked there; but I know we did not get enough horses, we never could get enough. We had usually a lot of dismounted men.

22009. Even during the later stages of the war?—Oh, yes; it was a perpetual fight to try to get horses.

22010. What did you do? Did you requisition headquarters?—Yes, we made every kind of side attack to get them. Everybody had the same experience; they were all competing against one another, representing their cases so as to get more horses.

22011. But these horses had exceptionally hard work; you say they were underfed, and they had to carry excessive weights of saddlery and equipments, and often bad riders?—Yes.

22012. All that would tell against the lasting powers of the horse?—Yes, very much; and then there were heavy night marches and fighting the next day, away from their transport, and with most of the food tumbled out of nosebags; and one thing and another, they did not get much; in fact, they got too little at these times.

22013. You say you think that to get the best out of irregular corps it is very desirable to have regular officers in command?—I think that very important, and staff also; at least one non-commissioned officer a squadron.

22014. Had most of the corps you saw that advantage?—Not most; the Scottish Horse had, and it was with me during almost the whole of the latter part of the war, but the 7th Battalion of the Imperial Yeomanry had not; they had a certain number, but were not fully completed with them.

22015. Of course, all those officers were officers taken from the regiments in the Service somewhere or another?—Yes, that is what happens.

22016. That bears upon the same question you were discussing just now?—Yes, you cannot get them.

22017. And therefore you think there should be more officers?—I think there must be more officers on account of the wear and tear. Immediately you have a fight if you lose a dozen officers in your regiment the efficiency of the regiment is immediately influenced.

22018. You think the pay of the junior ranks is too small?—I think ridiculously small, and it is not fair to expect a subaltern to perform his duties for 5s. 3d., or whatever it is he gets a day.

22019. You wish also to dwell upon *esprit de corps* and discipline?—I think those are very, very important; in regiments where those were of a high standard the regiments were proportionately better than others.

22020. Are there any particular directions in which you think those points can be encouraged?—I would encourage and foster in every kind of way *esprit de corps* and discipline; they are most important.

22021. And as to the training of the men, you remark, as you did when speaking about the officers, on the want of suitable ground?—That is so; it runs through all ranks, not so much in the case of the men perhaps, but it must for them be very hard to experience the kind of nonsense which goes on—I call it nonsense—in the training on bad ground.

22022. In questions of judging distance, and so on, the men should have ground also?—You can judge distance over other ground; but you are always judging from one particular place, and they soon get to know the distances all round.

22023. (Sir John Jackson.) Could you not get some very good ground in the Highlands of Scotland?—I have no doubt it could be got, but I think there must be some scheme in which civilians and owners of property over the country could help, with an understanding that the troops should not go more than once or twice over the ground, so as not to disturb game, but that they should only occasionally go. This would give

us a chance. Now you cannot make out any fair scheme for training, as a rule, owing to the want of ground; you have to make the scheme work so as to fit in on an extremely small bit of ground, which is not instructive; all know it must be brought on to that ground.

22024. (Sir Henry Norman.) Did the enemy ever make a real assault or attack upon Kimberley?—No.

22025. You were alluding to the difficulties of training owing to the want of ground; have you had experience in battalions at home of late years?—In Ireland I have; I was second in command of a battalion in Ireland shortly before the War.

22026. Of course the initial training of troops must take place here. Have you found from experience that there has been difficulty in training owing to the want of men available for training?—Immense difficulty every now and again, but I think that is past now; I think the men will now be available.

22027. I heard the other day the case of an officer who had been some time in the Service and had never been on parade except Church Parade owing to their being no men, and the companies when they do turn out are so very small?—That, I think, has been generally my experience throughout my Service—that there have been no men to deal with, but I think that has been rectified now—I hope it has.

22028. I have heard reports which seem to show that it has not yet been rectified at all events. Lord Roberts, when he was before this Commission, gave evidence to the following effect:—"I reached Modder River on the 10th February, and came into heliographic communication with Colonel Kekewich. He informed me of the trouble he was having with the leading civilians who threatened to surrender unless they could be assured that they would be speedily relieved. In reply, I ordered Colonel Kekewich to impress upon the inhabitants the disastrous and humiliating effect of surrender after so prolonged and glorious defence; that every endeavour was being made to relieve Kimberley, and I added that as martial law had been proclaimed, he had full power to prohibit by force, if necessary, any public meeting he considered undesirable, and also to arrest any individual no matter how high his position, who acted in a manner prejudicial to national interests." This evidence of Lord Roberts was more or less borne out by some evidence given by Sir Redvers Buller. Can you supplement that in any way, or give us any information about this state of feeling in Kimberley?—Of course, this opens a very big question; but if the Commission wish to go into that, I can only say I had very serious trouble with Mr. Rhodes during the siege, and it brings up all that, and I do not know whether the Commission wish to touch upon that or not.

22029. Mr. Rhodes is not alluded to here; it says "the leading civilians"?—That is Mr. Rhodes; the leading civilians were really nobody in this matter.

22030. Were you given really serious trouble by this decision on the part of some people to surrender?—I never used the word "surrender" in any kind of way. I have looked over all my notes, and I never did use it in any kind of way.

22031. (Sir George Taubman-Goldie.) You do not suggest for a moment that Mr. Rhodes ever wished to surrender?—No, I do not—not to surrender.

22032. (Sir Henry Norman.) In Sir Redvers Buller's evidence he says the impression was that surrender was contemplated?—Of course, I do not know what they sent down; that was in the latter part of the siege, during the last two or three days.

22033. Sir Redvers Buller said there was a very great risk?—That was a very early period that Sir Redvers Buller must have referred to, when he was in command.

22034. This is the passage from the evidence of Sir Redvers Buller to which I desired to refer you:—"I had to take Kimberley into account, because I knew of my own knowledge the immense importance that the natives attached to Kimberley. The following is a telegram from the De Beers Directors, Kimberley, to the High Commissioner, Cape Town, dated October 31st:—"We hope with the arrival of General Buller measures will be taken for the immediate relief of this place. Our information, which is reliable, gives not more than 2,000 to 3,000 Boers between this place and Orange River, and in our opinion we could already have been relieved without risk by the present force in Cape

Colony. We have a very limited supply of coal, and when it is done we must close down the works, which will cause serious trouble amongst our 10,000 savages in our compounds, who are now kept quiet by being kept at work. If we discharge them, and send them home, they are sure to be driven back to the town by the Boers, which must lead to heavy loss of life. As to the question of food supply, though well provided with some things, we have only nine days' tinned meat in case cattle are taken by the Boers, which, of course, is probable. We do not know the reasons which have delayed our relief, but we think your Excellency ought to weigh the risks caused by delay to this place with its 30,000 inhabitants, 10,000 of whom are raw savages. Now that the General has arrived we respectfully request to be informed as to the policy to be adopted regarding our relief, so as to enable us to take our own steps in case relief is refused. We are sending this by special messenger to Orange River, and will await your reply.' Telegrams much to the same effect came from the other magnates at Kimberley. (*Sir George Taubman-Goldie.*) Were they ever more explicit as to what the steps might be?—(A.) I never asked them. (*Viscount Esher.*) What did you understand by that expression at the time?—(A.) I understood that to be a threat to surrender. (Q.) Did you discuss it with Sir Alfred Milner?—(A.) I did. (Q.) Was that the view he also took?—(A.) Well, he thought so. He felt very much the state of Kimberley, and he was most anxious that I should take immediate steps for its relief. I was rather unwilling to do so, and I telegraphed to the officer who was commanding at Kimberley, who sent me a more reassuring telegram, but he said in it that he was of opinion that it depended upon whether the Town Guard would stand the strain of trench work; and I gathered, reading between the lines, that that rather hinted at the same sort of condition of affairs that was expressed, as I understood, by this telegram which I have read, and I thought the two together sufficiently serious to make me take a much greater risk than I liked taking by sending detached expedition to, at any rate, get near Kimberley. (*Chairman.*) You say that was from Colonel Kekewich?—(A.) Yes. (Q.) Have you got his telegram?—(A.) His telegram was that he was fairly well off, and that he was not afraid of Kimberley being taken at all so long as the Town Guard did not get worn out by duty, or words to that effect. (*Sir George Taubman-Goldie.*) Was there any more definite suggestion of surrender made at that time?—(A.) Well, I was given the impression such a suggestion had been received, but I cannot say more than that; I did not see it?—You see, anything that took place between Mr. Rhodes, who, of course, knew everything that was going on in Cape Colony, and others in the early part of the war was done behind my back.

22035. (*Chairman.*) Referring to the statement of Lord Roberts, did you at any time receive from anyone a definite threat of surrender?—No.

22036. A public meeting is also referred to; can you explain this?—Mr. Rhodes was anxious to hold a public

meeting, and I was obliged to inform him that this could not be allowed.

22037. What was the object of the public meeting?—It no doubt was intended to discuss and influence the situation. I must add that Mr. Rhodes was throughout clamouring for the very early relief of Kimberley, and at the time in question he was I think, under the impression that the relief was to be abandoned, and the action which he took in consequence of this impression caused great trouble. This was really due, I think, to information which had reached Mr. Rhodes from private sources regarding the movements of Lord Roberts preliminary to his great turning movement.

22037* (*Sir Henry Norman.*) Was there from a military point of view at any time any reason whatever for contemplating surrender?—No, none whatever.

22038. (*Sir John Edge.*) Had you any officers acting as Staff Officers under you who had not gone through the Staff College?—Yes, at different times during the war.

22039. How did you find them as Staff Officers?—Very good; but I consider the special training that the Staff Officer gets at the Staff College is of the very greatest importance. They came knowing their work, how to conduct staff work and that in the case of those officers I have had with me who were Staff College officers, this was of the very greatest assistance to me.

22040. Is it your opinion that more officers in the service ought to be put through the Staff College than are put through now?—I think so.

22041. (*Lord Strathcona and Mount Royal.*) You had only fifty of the Royal Engineers with you?—Yes.

22042. Who commanded them?—Really Lieutenant McInnes, my Engineer officer, and who was there before the siege, was the senior officer of Engineers there, and really arranged all the Engineer work.

22043. Do you look upon Lieutenant McInnes as being a very capable officer?—Really for his rank the most capable I have ever met.

22044. I mention it because he was one of the officers from the Royal Military College in Canada?—I look upon him as the best junior officer I have ever met.

22045. You had only one medical officer I think of the Army Medical Corps?—Yes.

22046. But you had several other medical men?—No, only civilians.

22047. They were all civilians?—Yes.

22048. You had only one military medical officer?—Mine was a surgeon-lieutenant, a very junior officer, who came up with the Imperial troops when they came up, and really he had eventually to become the president of all the doctors and run the whole of the medical arrangements in Kimberley.

22049. (*Chairman.*) Is there anything you would like to add?—No.

Major O. ARMSTRONG, D.S.O., called; and Examined.

22050. (*Chairman.*) You went to South Africa from India, I think?—Yes.

22051. And you became financial adviser to Lord Kitchener after Sir Fleetwood Wilson came home?—Yes.

22052. At what date was that?—I took up the duties about July, 1901.

22053. And you have only lately come home?—I have just come back.

22054. Is that because you were closing up accounts there?—I was closing up various outstanding accounts with the Colonial Governments and other accounts.

22055. How would you define your duties as financial adviser?—In assisting the Commander-in-Chief to control expenditure.

22056. What powers had you to enable you to do so?—I could always refer questions to Lord Kitchener, and take his orders on the subject.

22057. You have stated some definition of your duties in the paper you have handed in to us: is that the way in which you would prefer to take them?—I put that

down so as to more or less define my duties, in case it might be of any assistance to the Commission.

22058. Would you like me to take the first part of your statement as your answer to my question with regard to your duties?—Yes. "My duties as Financial Adviser were, to exercise a supervision over all disbursements of public monies in far greater detail than would have been possible to the Commander-in-Chief in person, and so enable him to generally control expenditure. To bring to his notice any economies which might be effected, and to suggest means to this end. To watch the incidence of expenditure, and as far as possible ensure that no charges fell on the Imperial funds which should legitimately have been debited against the various Colonies in South Africa. Most of the contracts which were entered into during the later stages of the war were sent to me for scrutiny, and approval of the Commander-in-Chief, by the various heads of departments. It was thus possible to ensure an equalisation of prices paid for local purchases at the various buying centres. I used periodically to visit such centres, and was enabled by this means to obtain a comparative knowledge of prices and conditions,

Major-General
R. G.
Kekewich,
C.B.

10 June 1903.

Major O.
Armstrong,

which rendered it possible to make my office a more or less co-ordinating centre in so far as expenditure and principles were concerned. Some of the larger questions dealt with were:—Shipping—demurrage, landing charges, etc., rail charges for transport of troops and stores—Imperial military railway expenditure and revenue; telegraph rates and expenditure; purchases in South Africa by the various departments; banking, exchange, and raising funds; Customs questions; all claims and adjustments as between the Colonial Governments and the Imperial Government; also the final adjustment at the conclusion of hostilities; expenditure on Colonial forces; monthly expenditure by the various spending departments; contracts entered into in South Africa."

22059. As a matter of fact after June, 1901, did all disbursements come under your supervision?—Statements of expenditure were sent to me. I used to scrutinise them and ask any questions which might seem necessary on behalf of the Commander-in-Chief.

22060. They were sent to you from whom?—There was a monthly statement of the expenditure which came through the Chief Paymaster for each Colony separately, and a summary of the total expenditure in South Africa. The Paymaster of each Colony furnished a statement, and this was summarised in the All South Africa statement. Heads of Departments also furnished similar information.

22061. What happened with the accounts of each separate column?—Those went direct to the Paymasters and Departments concerned; those I had nothing to do with.

22062. But they must have been summarised in the accounts that came to you?—They were all summarised under Vote heads in the War Office Form.

22063. When you say you had to bring to the Chief's notice any economies that might be effected that would mean going in some detail into the accounts?—Yes, but it implied going into details of Departmental accounts and Departmental expenditure, which practically embraced any expenditure incurred by columns or other branches.

22064. And you had to watch the expenditure as between the Imperial and Colonial Governments?—That also.

22065. Did that involve much work?—A good deal.

22066. And then you had all the contracts, or most of the contracts, in the latter part of the war?—Yes.

22067. At what stage did they come to you?—Expenditure over £1,000 was generally sent for scrutiny or covering authority.

22068. Do you mean before the contract was accepted?—If possible, but if there was emergency the contract was accepted, and it was sent on afterwards for covering authority.

22069. Did you find it necessary to make observations upon many of these contracts?—Occasionally one had to make a few observations.

22070. On what sort of grounds?—Sometimes the prices paid at one place would be higher—disproportionately higher than they were at another. The chief purchasing centres were, of course, the various ports in South Africa, and the prices varied, sometimes, unduly.

22071. Were you able, do you think, to introduce economies by this supervision of contracts?—I think buying was considerably cheaper in the latter half of the campaign.

22072. The contractors found out that the high prices would be discovered?—I think so, but I also think that officers at the ports got into a better system of buying by being told how prices and supplies were ruling in other places, and by having general information in regard to the markets placed at their disposal.

22073. It was want of information in the purchasing?—Very often.

22074. You mention a series of larger questions dealt with. Shipping—had you much to do with the shipping?—The shipping was mostly done from home. There was a certain amount of inter-port shipping which was done in South Africa, but the charters of ships were all drawn at home and entered into in London. They affected us in so far that very often the question of demurrage came up, and we had to write home and ask that if possible

more lay days should be given, owing to the difficulty in discharging ships.

22075. Was the demurrage heavy in your time?—Very heavy sometimes.

22076. We had some evidence that in the early part of the war some of the demurrage was due to a desire to retain the ships that they might be on the spot; that, I suppose, had rather passed away?—That had passed away. Great difficulties existed in landing goods at the various ports and in getting them away from the ports on account of the general block on the line. The harbour boards had not sufficient lighters or sufficient accommodation to discharge ships.

22077. The rail charges was a subject which Sir Fleetwood Wilson reported upon?—Yes, but we reduced the Cape charges subsequent to his leaving.

22078. To the Cape?—Yes, to and from.

22079. He mentions specially the Natal charges?—Yes.

22080. They had been reduced in his time?—Yes. Later on we pressed for a further reduction from the Cape.

22081. And do you think they were reasonable afterwards?—Quite reasonable.

22082. The Imperial military railway expenditure I suppose gradually increased?—No, it decreased because we were taking the Civil Revenue, and as time went it was possible to allow more civil traffic to come up and to open more stamps on the mines. That gave us a certain amount of revenue to set off against the gross expenditure.

22083. I meant rather that there was more railway under your charge at the end, was there not?—Practically not, as the whole line was really open at the time I took over the duties of Financial Adviser.

22084. And telegraph rates?—These were reasonable.

22085. You speak of purchases in South Africa by the various departments: how is that separate from the contracts and expenditure of which you have spoken already?—It is practically the same, but very often it was not quite in the nature of a contract. There might be expenditure, for instance, in buying large quantities of oats, hay from farmers, or buying wagons and things of that sort. I practically meant that all expenditure over a thousand pounds was sent up for scrutiny.

22086. Who were the purchasing officers in that case?—They generally belonged to the various departments—the Ordnance, Army Service Corps and Transport, &c., all these departments had purchasing officers in different places.

22087. And do you think the work was well done?—I think quite well done towards the latter half of the campaign.

22088. They wanted experience in the earlier part?—I think so; many had had no experience in buying at home, and then were called upon to buy very largely out in South Africa.

22089. Do you wish to say anything about banking exchange?—No.

22090. That was dealt with by Sir Fleetwood Wilson?—Yes, and subsequently by me.

22091. Customs?—We had a good deal of trouble with the Cape Government; duty had been paid on certain articles purchased by us on which we claimed a refund.

22092. Has that been settled?—No, it is still pending.

22093. "Also the final adjustment at the conclusion of hostilities"; is that the work that you have been doing just now?—That is the work I have practically been doing for the last year.

22094. Is it now concluded?—Not entirely; there are one or two questions still outstanding as between the Cape, the new Colonies and the Imperial Government; Natal is practically concluded.

22095. Are you fairly satisfied with the results?—Quite satisfied as far as Natal goes, and as far as the Cape I hope they will adopt the suggestions made. I do not know what line they will take on the subject yet. They have not treated the Imperial Government very liberally.

22096. "Expenditure on Colonial forces"?—That was

eventually accepted by the Cape Government. It was a very heavy item, and Lord Kitchener thought the Colonial Government ought to bear it. I went down to negotiate with the Cape Government about it, and eventually they took it over.

22097. You are speaking simply of the African forces?—Yes, only the Cape Defence forces.

22098. Not the oversea?—No.

22099. They took it over and undertook all the expenditure?—They undertook about £250,000 a month, I should think—between £200,000 and £250,000 a month—but they only took that over as from November 1st, 1901; up to that we were paying it.

22100. That, of course, has been discontinued, I suppose?—Yes.

22101. "Monthly expenditure by the various spending Departments." What do you mean by that?—The summary of expenditure that was submitted every month showing what had been expended under the various Vote heads and sub-heads of Votes. I used to scrutinise it and take it up to Lord Kitchener. If there was any rise in expenditure in one month as against another I used generally to write and ask whether there was any explanation why it had risen in that month, I used to enquire into it and see if there was any way we could reduce expenditure generally.

22102. Were you able to effect economies in that way?—I think there were very considerable economies effected.

22103. Then you mention contracts entered into in South Africa; were you satisfied with them?—The later contracts were all satisfactory.

22104. And the earlier?—With those I had nothing to do; that was before my time.

22105. That you do not wish to speak to?—I have not sufficient detailed knowledge of them to do so.

22106. Do you consider that the experience of the war has proved the necessity of a Financial Adviser?—I think certainly.

22107. And also that there should be such an appointment in peace time in case of Army Corps?—I think so.

22108. You may be aware that there is a Financial Member of the Staff?—Yes.

22109. You are not prepared to speak of that particular form of it?—I do not know exactly what form the duties take so should not like to give an opinion.

22110. What is it that you, in your mind, would require from an officer who was Financial Adviser to the General in an Army Corps?—I think he should have certain discretionary powers granted to him to deal with expenditure generally without constant reference and correspondence. That he should be allowed to decide whether certain charges should be either wiped off, or charged to the public; he should be allowed to have discretionary powers in certain cases—fairly large discretionary powers.

22111. Do you mean him to be a military officer?—I think it would be better.

22112. Where is he to get his training?—I think you could find men; if we had a Commercial Intelligence branch, I believe you could very soon train a certain number of officers for the duties of a Financial Adviser.

22113. There is a Minute which you have been good enough to give us which I suppose you would put in—the Minute on Commercial Intelligence?—Yes.

MINUTE ON COMMERCIAL INTELLIGENCE.

I think it may be admitted that the South African campaign has demonstrated that, in time of war, a central bureau, exercising financial control at the seat of operations, becomes a necessity. Further, that such an office can render valuable service by fulfilling the function of co-ordination as between various Departments, and individuals at the several purchasing centres, and markets.

It is obvious that the officers, or officer, in whom such control is vested should be acquainted with business methods, have a knowledge of trade questions and markets generally, and understand how to deal with business men bankers, shippers, etc., etc.

The average officer has little or no experience of business. Under normal conditions he is never called upon to assume the responsibility for large purchases, or contracts involving the expenditure of very large sums of money. When, therefore, under Service conditions, he is suddenly forced into a position where such responsibility devolves on him, he is of necessity unfitted to accept it, and has at the same time no means of obtaining such information as would, at all events, save him from committing serious errors, entailing considerable waste of public monies. He is no match for the business man, so may have to buy his experience at a most critical time when the cost is heaviest to the State, and at a time when control is of necessity relaxed.

If I may speak from experience gained in South Africa, I would unhesitatingly say that officers, generally, are quite ready to effect economies, and save the State money if only they can obtain assistance, or the necessary information how to set about it. Once it is known that they can apply direct to a central office and get an early reply, they will gladly avail themselves of the opportunity, time rarely admitting of reference through long official channels.

In view of being prepared in case of a future campaign to meet the demand for a trained staff to carry out the duties of financial control, I would venture to suggest the present establishment of a Commercial Intelligence Branch. I believe that were another campaign to occur, an organisation of this description would prove a necessity, and that it would more than justify its existence in times of peace by enabling considerable economies to be effected.

It should be so organised that on the outbreak of a campaign it would be possible to send out a Financial Adviser or Financial Board of Control to the seat of war, thus ensuring a very close touch being maintained between expenditure, and methods followed abroad with those obtaining at home. By this means the co-operation necessary to effect economies, or to ensure a better organisation which might be dependent on joint action being taken both at home and at the seat of war, would be ensured, since the organisation and methods of working would be understood and in consonance in both offices.

The Board at the seat of war, while in no way hampering the action of any individual or Department, would exercise control over contracts and agreements; would ensure that comparative knowledge was made available for all purchasing officers and co-related Departments, both in regard to purchasing as well as in regard to mutual requirements. The difficulties which arose in South Africa, through widely divergent agreements having been entered into in the earlier phases of the campaign, for similar or cognate services, in various parts of the country, would not arise. Any measures or suggestions involving more than a determined sum of money would also be referred to the Board for advice and approval.

The Financial Board would centralise local information and with their knowledge of home conditions, markets, shipping exchange, would be in a position to point out where more economical courses could be followed.

In the earlier days of the late campaign the lack of "comparative knowledge," due to the absence of a central bureau, resulted in a want of co-operation in purchasing between branches and Departments. Quotations could not be circulated, since no central organisation for this purpose existed. This point the merchants took full advantage of, with the result that prices, which should not have varied in the case of ports beyond the freight or shipping basis, were put up 10 per cent., or even 20 per cent., as between adjoining centres. Another point in this connection, which showed the necessity of a central control, was the omission to consider prices in relation to freight and rail charges at point of delivery. This was due in part to the incidence of expenditure falling under our present system of accounting on separate votes.

During peace the Commercial Intelligence Branch would be in touch with all foreign as well as home markets. It would obtain information from Consuls, Military Attachés, and other sources in regard to available supplies, animals, and other articles likely to be required, and keep in touch with prevailing rates of shipping, freight, exchange, etc.

It would collate local information as to the reliability of large firms, breeders, agents, and others who might come forward or be called upon to undertake large contracts.

At present, each Army Department has to face the difficulty of endeavouring to obtain its own intelligence

Major O.
Armstrong,
D.S.O.

10 June 1903.

Major O.
Armstrong,
D.S.O.
10 June 1903.

on such points without any organisation being at its disposal.

Under the suggested scheme there would be a distinct organisation for this purpose, which would be in constant communication with official and business people in various countries. It would generally be possible to obtain information on the various points asked for through or from the same sources, or, in cases where this did not prove feasible, there would be no difficulty in getting into touch with persons able to furnish special details on the various matters under inquiry.

It certainly would seem probable that by entrusting the collection of such information to one office, instead of to the several Departments concerned, more satisfactory results could be obtained without any corresponding increase of expenditure. Many large business firms now admit the necessity of an inquiry office which is organised on similar lines and with the same object. A Commercial Intelligence Branch would be an acceptance of this principle on an extended scale.

By this means, in course of time, a fund of valuable knowledge would be accumulated, which would prove of service in all cases where organisation or reorganisation was under consideration. In the case of an impending mobilisation the state of all the large markets in direct reference to our probable requirements would be known. It would, by a distribution of orders, be possible to at once enter into provisional agreements and contracts, or to secure options on large quantities of stores, supplies, or animals without seriously disturbing prices. It would also minimise the danger of the fact that preparations were being made becoming public knowledge.

It would be possible to play one market against another, ensuring an even distribution, and so avoiding the error of throwing large orders successively on any given market where a supply was known to exist, with the consequence that, as delivery would have to be given within a time limit, prices would instantly rise against us. Instances where such action has operated to our detriment could easily be quoted during the rush in the earlier phases of the campaign.

Again, experience has shown, certainly in South Africa, that once it is known that any definite person or department is willing to receive or consider information or details in connection with business matters, many practical suggestions and useful hints are forthcoming. It has often been stated that one of the objections to offering assistance is the difficulty civilians or business men experience in knowing to whom to apply, or finding that the same points require elucidating to various people as more than one Department is affected, a point which business men particularly object to.

By working in co-operation with the Director of Contracts there is little doubt that such an Intelligence Office could contribute largely towards saving public funds in times of peace, and *a fortiori* in time of war.

The data available would permit of a closer check or control being kept on expenditure incurred in the various Colonies or Dependencies where troops are quartered.

This branch of the Intelligence Department need be neither large nor costly. I would, therefore, venture to submit that it is an experiment which might deserve consideration.

22114. I do not quite follow how your Commercial Intelligence Branch would be manned—would it be manned by officers taken from the Service or otherwise?—I think you could find suitable officers for it as time went on.

22115. Selected from the various regiments in the Service?—I think so.

22116. And seconded for this particular work?—They would have to be seconded for a considerable time. It would be no use training a man and then letting him revert to regimental duty, so losing his services just when he became valuable.

22117. (Lord Strathcona and Mount Royal.) Would they be military officers?—I think it would be possible to find military officers who could do the work.

22118. And eligible for promotion afterwards to any position in the Army?—I have only put forward the idea, and have not so far worked out the details of the scheme.

22119. Where would it cease? Would he go to the rank of major?—Promotion might continue though it

would not necessarily follow that the individual would be fitted to take command in the field afterwards. It might even be treated as a non-combatant branch if necessary.

22120. (Chairman.) Has it any connection with the Paymaster?—Not necessarily. What has been proved in this campaign is that there is an absence, under the present system, of combination. There is no central office to which all such questions can be referred and co-related so enabling Departments to work together and reduce expenditure. That is what I think is a necessity.

22121. I suppose the Contract Office would in a sense bring them together?—It does, but not sufficiently; only in so far as actual contracts are concerned. What seems a necessity is to bring all contracts into direct consideration with shipping, freight, exchange, etc. All these points seem at present to be treated separately and not collectively, in fact, where expenditure is concerned to bring one Department more in touch with another.

22122. And especially to provide officers who would have the experience to act as financial advisers, I suppose, not only to the Commander-in-Chief but also to columns in the field?—Certainly.

22123. You say that there ought to be an auditing staff also at the base?—I think that was certainly shown in this campaign. Accounts were sent over sea. These often came out with queries entailing correspondence and an oversea reply involving an immense amount of work and delay in auditing accounts. If there had been an auditing staff at the base with wide discretionary powers, I believe it would have assisted very materially in keeping the accounts up-to-date all through the campaign.

22124. A wide discretion would be inevitable; it would be only a different way of carrying on the correspondence unless there was a wide discretion?—Of course.

22125. Do you think a wide discretion could be safely given?—I think so.

22126. (Sir Henry Norman.) You recommend that consolidated pay should be given on service; what is the object of that, because little allowances are constantly given to men for performing special duties?—I do not mean that these should be abolished, I mean that they should be carried to credit of the man, but whatever rate of pay was actually given to the man on Service should be a determined rate. He might have any allowances that might be due to him brought to his credit and set against family allotments or any other liabilities at the base or in the Paymaster's Office, so as to minimise the actual work of disbursement of pay in the field.

22127. And you think that could be carried out?—I think if each man had a small book similar to that issued to an Indian follower (which practically acts as a letter of credit), it could be carried out.

22128. But these service small books, which I am glad to see you recommend, apply to the soldiers, do they not?—Not in the same way; they are generally issued to followers.

22129. Do you not think a small book is a good thing for a soldier to carry?—An excellent thing.

22130. I understood they had been re-established?—I did not know they had been re-established.

22131. And the same system is in vogue with followers in India?—Exactly the same system.

22132. You think your system of accounting, which is I suppose, the War Office system of accounting, does not show outstanding credits or liabilities of the various Departments?—That was one difficulty experienced; it was never possible to tell from the monthly statement of expenditure whether we were really reducing expenditure or not. It was found, at least at first, that there were a tremendous number of outstanding liabilities, and after a great deal of pressure and trouble it became possible to get these gradually cleared off. In consequence the monthly returns showed an increasing expenditure, while there was actually a decrease. There was nothing to show how a Department stood until Lord Kitchener started a system by which outstanding debits or outstanding credits were shown.

22133. And it is impossible to arrange that so that all the outstanding credits and debits could be shown?—

It was arranged all through the latter part of the campaign.

22134. And they were shown?—They were shown, by means of a separate return, but there was no provision for that in our system of accounting.

22135. Have you been asked by the War Department to make any suggestions?—I mentioned that point to the Accountant-General, and I think he rather agreed with it.

22136. Do you think it possible that it may be carried out?—I think so; there did not seem very much trouble once it was started; once it was ascertained how Departments stood it did not seem to involve any very great labour.

22137. And as to these small books which are now issued to followers in India, you think they should be issued to followers in Africa as well?—I would issue them to soldiers, and everybody who was drawing pay.

22138. And you would give authority to the Financial Adviser to write off certain things?—Yes.

22139. Of course you would have to find how far he could write off things?—In the field, I think, that should be left a good deal to the discretion of the Commander-in-Chief. He would naturally do it in accordance with broad principles defined by the Secretary of State.

22140. This was done at the end of the campaign?—The War Office delegated certain power to recommend that money should be written off when the campaign was over, so that the whole case need not be referred home.

22141. And you think that also ought to be done in peace time; would not that be rather dangerous?—Within limits—where no precedent was involved, or no very large sum.

22142. Is there any power to write off now?—I do not know what the powers are which are delegate to financial advisers, I believe up to £50.

22143. But you would have a much bigger limit in time of war?—Much.

22144. As regards purchase of stores in time of war, you cannot limit that; that must rest with the senior officer on the spot, who thinks the stores are necessary?—You can only approve and control it.

22145. After it is done?—Yes, but even that is effective; when a purchasing officer finds his purchases and the prices he is paying are open to scrutiny and comment, it has a natural tendency to make him careful.

22146. With regard to the Minute on Commercial Intelligence, I understood you, in answer to a question Lord Strathcona put, to say that you would have military officers; would you create a separate Department?—I would make it a branch of the Intelligence Department or affiliate it with the Intelligence Department.

22147. Would you keep the officers on the strength of the regiments or strike them off and have a separate Department like the Army Service Corps?—It might be a separate Department, it would be a very small one.

22148. Of course it would not fit an officer in the slightest degree for military command—any amount of commercial intelligence?—No.

22149. Would it not be better perhaps to make it open to soldiers, but equally open to civilians—War Office clerks?—It would be open to either; but if qualified soldiers were available I think they might be preferable.

22150. They would very soon cease to be soldiers, would they not?—Yes, they might from a soldiering point of view.

22151. (*Lord Strathcona and Mount Royal.*) Is it not the case that in the Department of Director of Contracts at present means are taken for ascertaining everything in regard to the prices in all parts of the world, and as to where commodities and supplies can be got on the best terms? Is it not the case that what you propose in this Minute on Commercial Intelligence is in vogue now?—I am afraid I am not very well acquainted with the system in vogue in the War Office in regard to this point, but I believe a good deal is done by individual departments also in obtaining intelligence.

22152. What you chiefly recommend is that military officers instead of civil officers be in that position?—Oh no; what I would recommend is that one office should

deal with the whole question of intelligence irrespective of whether it is civil or military—that there should be a central bureau for all information.

Major O. Armstrong,
D.S.O

22153. And there is no such office now?—I do not think a co-ordinated central bureau exists at present. 10 June 1903.

22154. Who was responsible for the contracts made in South Africa? Was there not one director to whom reference was made?—No, I was the only person to whom all contracts were referred. There was no director of contracts; each department as its needs arose called for tenders, and then submitted the contract either for approval, or entered into it, and submitted it for covering authority.

22155. With regard to the settlement of accounts, they had to refer to the office at home in many cases, had they not?—No, not for contracts in South Africa; the contractors were paid out there, and the amount debited to South African expenditure. A copy of these contracts may have been sent home, but they were actually paid for out there by the various Departments through the Paymaster.

22156. (*Sir Henry Norman.*) And finally disposed of out there?—Yes.

22157. There was a record sent home?—I believe a record was always sent home by each Department.

22158. To that Department or to the War Office?—To the War Office, I believe. I am not certain of the actual procedure as between Departments and the War Office, but I know the only person contracts came to in so far as scrutiny was concerned was myself for the information of the Chief.

22159. Would they go to the Accountant-General of the War Office to be compiled as part of the War expenditure?—I suppose they would go to him, but would have already appeared as expenditure in South Africa.

22160. (*Sir Frederick Duxley.*) By this Commercial Intelligence Department, which you say might be affiliated with the Military Intelligence Department, you do not mean to supersede the Director of Contracts?—No, I propose it should work with him.

22161. You simply obtain information from every part of the world touching military necessities?—Yes.

22162. And the Director of Contracts may then apply to the Intelligence Department on any subject he sees fit?—Yes.

22163. That is the course that would be pursued?—That is what is meant by it.

22164. (*Sir John Jackson.*) Had you a large staff under you in this Department at the Cape?—No, very small.

22165. With regard to the Customs, were the ordinary Customs rates charged by the Colonial Government to the Imperial Government?—No; they remitted the customs dues, but there were a large number of contracts entered into in the early days of the war more especially, where we bought goods from open stock and we claimed a refund of customs from the Cape upon these, and that is the question still outstanding.

22166. As to goods that went over sea, were the ordinary duties charged upon those goods?—No, no duties were charged if they were consigned direct to us.

22167. As to the railway rates, did the Imperial Government get any material rebate?—Yes, from the Cape we got a considerable rebate from the beginning, and Natal gave us a better rate half way through the campaign. The Cape again modified their rate towards the latter end of the campaign.

22168. Did you get greater rebates, do you think, than some of the large customers of the railways?—Very much greater; of course we had an all-over rate, we could not differentiate between classes of goods.

22169. But, dealing with it on the average, you are of opinion that the rates that were paid were materially less than the rates paid by the large customers of the railway?—Yes.

22170. (*Sir George Taubman-Goldie.*) What branch of the Service do you belong to?—To the Indian Cavalry.

22171. You went to South Africa in the beginning of the war?—I went there in January, 1900.

22172. So that you were there for nearly months before you took up these duties?—Yes.

Major O.
Armstrong,
D.S.O.
10 June 1903.

22173. Should you say that by the want of a financial advising staff out there in the earlier part of the war, the first 18 months, there had been a considerable loss of public money?—Yes, I think there was a loss of public money by there not being a financial adviser out there in the early part of the war.

22174. Apart from the question of the Natal Railway and of the Standard Bank of South Africa, the two leading cases we have had before us, could you give us one or two instances to show where a financial staff could have saved money?—Generally in the supervision of contracts; prices became 10 to 15 per cent. lower as time went on, as officers learnt how to buy, and had information placed at their disposal. Then with regard to certain agreements which were entered into in the earlier days of the war, which had afterwards to be broken. These were entered into in a hurry, and on the supposition the war was going to last three months. As the war went on we had to get these agreements broken and make new ones. I do not think that would have occurred if a financial staff had been out there.

22175. (Sir John Jackson.) I suppose heavy compensations would be paid in some of these cases where the agreements were broken?—We paid no compensation.

22176. (Sir George Taubman-Goldie.) Taking the Generals of Divisions in the field, who do, of course, make local contracts, could not the Army Pay Department have been utilised, or might they not in the future be utilised, if they were properly trained?—I do not think you would ever get the training in the Army Pay Department, as at present constituted, to enable them both to carry on their own work, and at the same time get in touch with prices, rates, and the numerous details connected with the many buying departments.

22177. Sir Henry Norman's very reasonable objection to men ceasing to be soldiers does not apply to an Army Pay Department man, because he practically has ceased to be a soldier to some extent?—No.

22178. You do not think it would be possible to train the Army Pay Department so as to make them useful?—If you absolved them from carrying on the duties of paymasters, probably you could train them as well as anybody else. I do not think they could fulfil the duties of an Intelligence Officer and Paymaster at the same time.

22179. If an Indian Cavalry officer can learn finance, why cannot an Army Pay Department officer learn finance?—There is not the slightest reason, but you could not make him officiate as a paymaster and as an Intelligence officer.

22180. He could not combine the two duties, you think?—I do not think so; he has enough to do as it is.

22181. You know there is a strong feeling on the part of the Army Pay Department that the two should be synchronised?—Yes.

22182. But you do not think the thing feasible?—I think it could be done if you train officers for the special duties.

22183. Does it not seem to you to be a solution of the question in the minor branches that they might be trained young to combine these two duties?—Certainly.

22184. (Sir Henry Norman.) But you rather think they could not carry on the two duties together?—I do not think they could carry on the two duties together.

22185. The Regimental Paymaster would not be the man to be a financial adviser as to contracts?—I do not think so.

22186. (Chairman.) With regard to the question of prices which you mentioned, I suppose the prices at the beginning of the war would naturally be higher as there were greater risks to the contractor?—We bought very largely c.i.f. at the ports so that there was no risk to the contractor excepting ordinary over-sea insurance.

22187. And it was that class of article you were speaking of?—Yes; what very often happened was that supposing 10,000 bags of mealies were required, a merchant would come and say that he had 10,000 bags on such and such a ship due on such a day, and give a quotation, either free on truck or c.i.f. at the port.

22187.* I was thinking more of contracts like meat?—There, of course, there was both the organising staff and many other points to be considered, especially the duration of the war.

22188. There has been a good deal of criticism of the meat contract; we have had evidence about it, and that was one of the reasons given that at the beginning of the war not only was there the hurry that you spoke of, but there was also the considerable risk to the contractor which necessarily put up his prices?—I think another reason—I do not know whether it has been mentioned—was that the man did not know how long the war would last. He had to start a very large organisation to carry out his work, and, supposing the war had ended in three months, it would have been a very expensive organisation.

22189. And it was said that, from the Government point of view, they had no organisation by which they could have carried on the business?—That is correct; we had none.

22190. Was the third contract in your time?—Yes, the last contract.

22191. Then you got a reduction?—Yes, a very considerable reduction; they lost money by it, I believe.

22192. And the reasons which I have been stating affected the question?—Yes.

22193. (Sir Frederick Darley.) Did you form any opinion about the meat contract as to whether it was favourable or unfavourable?—Which contract do you refer to?

22194. Take the very first contract?—I think that was not a very favourable contract to us, but I do not see what else could have been done at the time.

22195. Was it not impossible for any other contract to be made at that time, except the one that was made?—I do not think anybody would have come forward with the same organisation for distribution that these people had.

22196. And taking the risk of delivery of the meat in the field?—That is so.

22197. Then there was no fault to be found with the contract?—No. The only thing that might have been done would have been to have inserted a revisionary clause providing that if the war lasted for a considerable number of months this contract would be open to revision.

22198. Perhaps the contractor would have asked a great deal more if that clause had been put in?—I do not think he would, because everybody thought at that time the war would be over soon, and I think he shared the belief.

22199. (Chairman.) Have you anything else you wish to say?—I think there is one thing I should like to say, and that is about the present vote system being very inelastic, making it very difficult to watch expenditure and exercise control. The Commander-in-Chief, when he does see the expenditure classified under Vote heads in the monthly return, finds it exceedingly difficult to get any idea of what the actual expenditure of a Department is, or how monies are being disbursed in relation to services performed. I think the Sub-heads want amplifying, and that it might be possible to make them a little more elastic, so as to separate expenditure and classify it to a greater degree than is now possible, for instance, take Transport, you have the whole wagon transport charges and rail transport charges, and probably certain other charges, such as landing or interport shipping, or cognate services all put into one Vote and shown in that monthly return under one Vote. To separate charges and arrive at the cost of any one service, and so judge whether you are getting value for expenditure incurred is under our present system an exceedingly difficult matter involving an enormous amount of labour.

22200. You think it should be amended?—I think the Vote Sub-heads want amplifying; whether the Votes could be recast is a matter I am not prepared to give an opinion on, but I think if it were possible in some way to recast the Votes, it would render accounting and financial control simpler and more feasible.

APPENDIX A.

Appendix A.

MEMORANDUM

SENT TO OFFICERS, WHO HAVE HELD COMMANDS IN SOUTH AFRICA, SHOWING THE POINTS UPON WHICH THE ROYAL COMMISSION DESIRE TO HEAR EVIDENCE.

Evidence from officers who have held commands in South Africa during the War is desired by the Commission chiefly upon the following subjects, viz. :—

1. The adequacy, in point of strength, of the forces in the field at different dates to the work which they had to do.

2. The quality of the men of the Regular and Auxiliary forces in respect of—

Shooting capability ;

Marching ;

Horsemanship and Horsemastership ;

Intrenchment and cover ;

General physique, morale, and intelligence ; regard being had both to the quality of the men when they arrived in South Africa and to any improvement in the course of the campaign. Any deductions from the experience of the War with regard to future training of the men may also be suggested.

3. Deductions from the experience of the War in connection with the general question of the training and duties of regimental and staff officers.

4. Supplies of ammunition, equipment, food, and forage. Under this head the Commission desire evidence as to—

(a) The method and sufficiency of supply in the field.

(b) Quality of supplies.

(c) Any delay or failure on the part of contractors.

(d) The number and quality of horses.

5. Land transport, including the use of railways, ox and mule transport, traction trains.

6. The adequacy of the Medical and Engineer Services.

7. The effectiveness of the guns, rifles, and other armament used.

The Commission also desire to obtain evidence regarding the efficiency of the organisation of the Army, and the use of the different arms under the conditions of modern warfare, as illustrated by the experience of officers who have served in the South African War, and to receive any suggestions with regard to the future which this experience may have brought to their minds. But, in making reference for this purpose to the military operations witnesses should avoid any review of the decisions already made by superior authority upon the conduct of individual officers, and any controversial discussion arising with regard to strategy or tactics in particular events.

In any case where it is desired to make a statement regarding the personal conduct of a witness or of other officers, it will be necessary that the nature of such a statement should be communicated beforehand to the Secretary, and the consent of the Commission obtained.

APPENDIX B.

MEMORANDUM ON THE COLONIAL FORCES EMPLOYED IN SOUTH AFRICA, 1899-1902, BY LIEUT.-COLONEL
JOHN ADYE, C.B., R.A., LATE ASSISTANT ADJUTANT-GENERAL FOR COLONIAL FORCES, SOUTH AFRICA.

See Questions 12,205-12,373.

The war in South Africa was the first one in which we have employed Colonial Forces on a large scale and from a number of Colonies.

The experiences gained in connection with them were many, and, in view of future similar occasions, are worth placing on record.

The following memorandum only deals with the larger questions of organisation and administration in the field.

The total number of Colonial Forces employed of all natures was about:

30,000 Oversea Colonials,
60,000 South African Colonials.

The word "Oversea" is used to distinguish corps coming from Colonies other than South African.

Owing to certain circumstances the numbers of the South African Corps can only be approximately estimated.

The Colonial Forces employed were of two sorts:—

- (a) Permanent Forces, existing before and continuing after the war.
- (b) Irregular Forces, raised specially for the war, and disbanded at or before its close.

(a) were Regular Colonial Forces, having an existing organisation; and, therefore, present few special features. They came in small numbers only from outside Colonies, but comprise the Permanent Volunteer Forces of Cape Colony and Natal.

(b) form the majority of the Colonial Forces employed, and present many points of interest, which are briefly dealt with under the following heads:—

They may further be classified—as regards South African Irregular Forces—as—

1. For general service in South Africa.
2. For service in certain Colonies of South Africa.
3. For local service in certain districts.
4. For defence of certain towns—Town Guards.

RECRUITING.

The oversea corps were, of course, recruited in their own Colonies, and, as they only came within the jurisdiction of the A.A.G. for Colonial Forces on landing in South Africa as formed bodies, their recruiting is not dealt with here.

Recruiting for South African Corps, both Permanent and Irregular, went on in Cape Colony, Natal, and Rhodesia, and, to a small extent, in the Transvaal and Orange River Colony in the final stages of the war. The recruiting for the Volunteer Forces was comparatively small, merely to keep these Forces up to their establishment, and the bulk of the work was in connection with the Irregulars.

For them recruiting was carried out regimentally, and not for general service, as encouraging competition. It was in the hands of regimental officers and N.C.O.'s, but at important centres there were also District Recruiting Officers who generally superintended and kept returns.

The regimental recruiters were apt to look rather to quantity than quality, and sometimes enlisted useless men, who had to be got rid of. They also occasionally obtained men at the seaports from men-of-war and merchant vessels, and in many ways their procedure was apt to be irregular.

The proper system, in my opinion, is for regimental recruiters to beat up recruits only, and bring them to the District Recruiting Officers, who must be responsible for passing them into the Service. This ensures one standard and system for all, and prevents abuses.

These D.R.O.'s should all be Regular officers, and should show no favouritism to special corps, but enlist men for the corps they originally wish to enter, provided it is open for recruiting. They should work under the orders of the local military authorities, and render returns to the officer on the Headquarter Staff dealing with Colonial Forces, who will send them instructions from time to time through the local military authorities.

The Medical Officers who examine recruits should also belong to the Regular Forces, where possible; but the ordinary standards need not necessarily be observed by them, and were not observed in South Africa. A few general instructions for the use of military and civil practitioners should be drawn up and issued by competent authority.

Facilities for testing in shooting, and, if necessary, in riding generally existed in South Africa. This is most essential.

The dépôt officers who receive, equip, and dispatch recruits should also be Regulars, and must be careful to avoid unnecessary detention of recruits.

At each recruiting centre a careful register must be kept, showing full name, regiment, rank, date of attestation, and period of service of each recruit; also a copy of his attestation sheet, and a note of his next of kin, with address and the amount of pay—if any—he wishes transmitted to friends or relatives. These records should be kept at some central station, such as Cape Town or Pietermaritzburg.

The cost of recruiting was a matter of some difficulty, and is scarcely provided for in any existing regulations, which are not framed for such circumstances. If ordinary regulations are too strictly adhered to recruiting is much cramped; on the other hand, if too free a hand is allowed, waste and speculation result.

I would give every D.R.O. an imprest account, and give him a fairly free hand in dealing with it, at the same time issuing general instructions for his guidance. Recruiting officers of all sorts must be most carefully selected. In South Africa we were recruiting in the actual theatre of war, and that added to our difficulties.

TERMS OF SERVICE.

Men enlisted for the Permanent Colonial Forces entered on the terms laid down for these forces in their respective colonies, but nothing definite was laid down for Irregular Forces. These forces in South Africa generally enlisted men at the beginning of the war for an indefinite term, such as "for three months or for as long as my services be required," which was held to mean that were a man's services required beyond three months, he could be retained indefinitely. When the war had lasted about a year, the desirability of letting men go who wished to be discharged was recognised, and the South African Irregular Corps were consequently gradually taken out of the field and reconstituted. Short terms of three and four months were introduced, but finally one of six months was generally adopted, and it was held that men thus enlisted could be held to serve for six months if required, but not longer, unless they wished, and that, if their services could be dispensed with before the six months expired, they could be discharged.

It would undoubtedly have been better to lay down one term of enlistment and one set of conditions of service for all South African Irregular Corps, and this should be done in future.

The period of six months I regard as too short, as, by the time a man is attested, clothed, equipped, sent to the front, and has gained some knowledge and experience, it is time for him to be discharged. Thus all South African Irregular Corps were in a continual state of change, which was most unsatisfactory to the regiment, and gave a great deal of work to the staff and depots, besides being expensive.

All C.O.s, I know, agree with me on this point.

The number of recruits enlisted in South Africa for general service corps averaged nearly 20,000 a year, which meant a very great deal of hard work, and was necessitated by the short term of six months' service, which, of course, had the effect of completely reconstituting the whole of the South African Irregular Forces every six months.

On the other hand, enlisting men for an indefinite period, such as "the duration of the war," or "as long as their services are required," is not satisfactory, for many reasons, and, in the case of an unexpectedly protracted struggle, is hard on the men, who may have enlisted with an expectation of a few months' service.

I think a year is the shortest period for which such forces should be raised, and, if disbanded within that period, men should be treated generously in the way of bonus. Oversea corps were generally enlisted for one year, and this was generally interpreted as one year in South Africa. This meant that from the time of enlistment in their own colony to time of discharge there on return was frequently a period of some sixteen months, and this was hard on men who had only obtained one year's leave from their civilian employers. I think all corps sent from overseas should be enlisted for one year in the theatre of war, and this should be clearly explained on enlistment.

Men of South African Corps who re-engaged were generally given one month's furlough on full pay with free railway tickets, and men of overseas corps who remained when their contingent returned were in 1901 given a step in rank, as a rule; but this was not done in 1902.

But whatever is applied to one overseas colony should be applied to all, and, before men are called for or accepted, the Imperial Government should lay down distinctly the period of service, the terms of enlistment, the pay, and the establishment. These should be universally applied, and not departed from.

ESTABLISHMENT.

This was a constant source of trouble, owing to it not having been clearly laid down from the first for all Colonial Corps, and also to the irregular proceedings of commanding officers, who would frequently exceed the establishment of officers and N.C.O.s without authority.

An establishment for South African Irregular Corps was laid down at the beginning of the war, but was amended more than once later. The overseas corps, on the other hand, had different establishments, according to the colony they came from. While colonies paid for their own contingents, as was the case at first, there was something to be said for their fixing their own establishments, although even then I think uniformity should have been aimed at; but once the Imperial Government took over the pay, it should have laid down a definite establishment for all Colonial corps, no matter from what colony. This would have ensured uniformity, and would have prevented a contingent 1,000 strong arriving from one colony under a lieutenant-colonel with one medical man, and another of similar strength arriving from another colony as a brigade, with a brigadier and five medical men, as happened.

The establishment should invariably be fixed by squadrons or companies, with a certain proportionate regimental establishment, according to the number of squadrons or companies. An authorised establishment based on our experiences in South Africa could easily be drawn up, and should be adhered to in future when the Imperial Government pays the Colonial forces.

The friction and delay caused in regard to pay alone through want of adherence to a fixed establishment was very great.

APPOINTMENT AND PROMOTION OF OFFICERS AND N.C.O.'s.

Appendix B.

This is a question of great importance for irregular troops.

Generally speaking, I think the C.O. and the Adjutant should be Regular officers, and the others Colonials. At the beginning of the war this was generally done in regard to South African Corps, but later, when certain Colonial officers had come to the front as good leaders, it was successfully departed from. But in such cases I think the Adjutant should be a Regular officer, and I think most Colonial C.O.'s will agree with me here, as a regular adjutant with a knowledge of military routine is very useful when irregulars and regulars are acting together.

Of course, all regular officers appointed to irregular corps must be picked men, and it is difficult in time of war to obtain such men, who are wanted with their own regiments. The selection of such men must be carefully made, as they may make or mar their irregular corps. The same difficulty of obtaining good men at such moments occurs with N.C.O.'s, and at least a few good N.C.O.'s from the Regular forces are required in each irregular corps.

The appointment and promotion of officers other than Regulars was left very much in the hands of the C.O.'s, not always with success; but every appointment or promotion had to be submitted to headquarters for the approval of the Commander-in-Chief, which was only withheld when something was known against the officer. C.O.'s, however, were too lax in forwarding their recommendations, and when they did so frequently omitted to give full particulars as to name, rank, cause of vacancy, date of appointment or promotion, etc. This often caused much delay.

The above remarks generally apply to South African Corps only. Oversea Corps had their original appointments made by the Government of their respective Colonies, but promotions and appointments of officers in South Africa were made by the C.O.'s, subject to the Commander-in-Chief's approval.

The appointment and promotion of N.C.O.'s were made by C.O.'s without reference to headquarters.

TRAINING.

But little training could be given to newly-raised corps or recruits for them, once these corps were in the field, as men were always urgently wanted there. Where possible, a little practice in riding and shooting, and some necessary elementary drill, was given while men were being clothed and equipped.

This method of sending untrained men straight into the field would be most dangerous against most enemies, and a training ground with proper instructors is essential at each recruiting centre. These instructors should be Regulars, but of course the amount of drill imparted to Regular soldiers should not be attempted.

It is best to form squadrons or companies at a time, and not to deal with smaller units, and, in the same way, when sending up recruits I would not send up individuals, but relieve whole squadrons or companies.

Most corps were composed of "squadrons." I prefer the word "companies," as these corps are rather Mounted Infantry than Cavalry.

EQUIPMENT.

The equipment was, as a rule, the same as for Regulars, but in some cases, especially early in the war, certain articles were purchased locally to avoid delay. Regiments were generally distinguished by badges, worn in the hat or on the shoulder.

Overseas corps generally arrived equipped.

The care of and accounting for equipment were not generally understood by Colonial Irregular Corps, but it would be idle to expect them to keep up proper equipment ledgers. A simple form of equipment account and indent forms might perhaps be devised for their use. A Quartermaster Sergeant or trained N.C.O. from the Regulars, was sometimes obtained to act as Quartermaster for Irregular Corps, and was always very useful.

Appendix B.

DISCIPLINE.

The discipline of Irregular troops hastily raised is always a matter of some difficulty.

As a rule the Oversea Irregular Forces were raised under the Army Act, but some of the South African Irregulars were raised under the local Volunteer Acts. The point is not one of very great importance, but it is as well to adopt one system.

But under whatever Act discipline is administered, certain difficulties arise when dealing with troops whose conditions of service and rates of pay are so unusual. The scale of fines, for instance, in use for the Regular Forces is unsuitable for men drawing five shillings a day, and whose pay has perhaps accumulated for months. Fining was the punishment usually inflicted by C.O.'s for minor offences, but the scale of fines inflicted was often quite unauthorised, and it would be hard to say in some instances what became of the money thus obtained, or in what way it was credited to the public. More serious offences were dealt with by courts-martial, whose procedure was correct and the same as that dealing with Regulars.

The discipline generally was good when away from the railway or from large towns, but indifferent when in their proximity. This is to some extent inevitable in the case of Irregular troops in time of war, and was aggravated by the fluctuating state of the regiments, in which, owing to the short periods of service, men were perpetually coming and going.

If Irregular forces are employed on a large scale, I think some rules for guidance of officers should be published as regards punishments.

The ordinary camp discipline was not always good in respect of horse lines, care of horses and equipment, roster of duties, etc. This was chiefly owing to want of experienced officers and of good N.C.O.'s.

Commanding officers were fond of discharging men whom they considered worthless, and often exercised this power without higher authority. From their point of view it is, of course, a great advantage to at once get rid of a useless or undesirable man without delay or further reference; but there are several objections to such a course. In the first place, no existing regulations give a C.O. such summary power, and men so discharged could claim to have been discharged illegally. In the second place, no uniformity of treatment can be maintained, one C.O. discharging for offences another would regard as trivial. Thirdly, men so discharged without reference to one central authority have only to go to the nearest recruiting place to enter some other regiment; but this, to some extent, may be checked if such discharges are authorised only from headquarters, and all recruiting stations notified.

PAY.

The rates of pay of Irregular Forces must necessarily be higher than those of Regulars. Those of South African Corps were based on those adopted about August, 1899, for the Rhodesian and Protectorate Regiments, raised by General Baden Powell. I think we could have obtained a sufficient number of good men at rather lower rates.

But whatever rates are fixed, it is essential that they apply to all Irregulars, and remain unchanged. Great confusion existed among some oversea corps, especially the first Bushmen Corps, because of the different rates of pay, and the different sources from which pay was drawn. Some of these corps were not aware what their correct rates were.

The first oversea contingents were paid by their respective colonies, and the rates were, therefore, fixed by those colonies; but even in that case it is most advisable that all colonies sending troops to a common theatre of war should pay alike.

Later contingents were paid by the Imperial Government, but I think a few drew pay partly from their own colony, partly from the Imperial Government, while one or two were also partly paid by public subscription raised in their own colony. These various sources of pay caused confusion, and gave rise in certain instances to an idea that corps so paid drew higher rates of pay than was actually the case.

It is essential that only one rate of pay be adopted, and that it be fully explained to men on enlistment, and that the attestation sheet signed by the man on joining contain that rate, for a private, clearly laid

down. The question of who pays is one for adjustment between the various Governments, and does not affect the soldier.

In the Regular army there are certain allowances in addition to pay, laid down in the regulations. These do not generally apply to Irregular forces, and cause confusion and friction.

I recommend that all rates of pay for Irregular forces be inclusive rates, and that no allowances be granted. Travelling on duty should be free, but lodging, detention, servants, forage, ration, fuel and light, and command and contingent allowances should not be granted.

As regards methods of account and payment, these naturally caused a good deal of trouble with Colonial Corps. Theoretically, the Company and Squadron Commanders should pay their men, and keep their accounts, but in practice this was found unworkable, as most of the officers had no experience of such work, and had no time to carry it out correctly. South African Irregular Corps were, therefore, given regimental paymasters, who took this burden off the shoulders of the combatant officers, and generally were stationed at bases where they were in touch with the Army Pay Department branches, and whence they visited the regiment from time to time to pay the men and get accounts signed.

Oversea Corps did not have paymasters, but they generally had some officer whom they could employ in this way. I recommend a paymaster as part of the establishment of all such corps above a certain strength. The selection of paymasters is a matter requiring a good deal of care, as a large amount of money passes through their hands.

Instructions for regimental paymasters, and for all officers should be drawn up and issued, and a simple form of pay sheet prepared. This would not only save a great deal of trouble and correspondence, but would also tend to economy, and prevent waste and fraud.

Men away from their regiment, left behind sick, or on detached duty, found great difficulty in drawing their pay. This was because their officers did not give them last pay certificates on which the A.P.D. could pay them. Any simple form of L.P.C. would do.

The whole question of payment of these Irregular Corps is one of some importance, and should be carefully gone into in peace, as thousands may be saved thereby and great discontent avoided.

DISBANDMENT AND DISCHARGE.

Some Irregular Corps were disbanded during the war, and all existing ones at its close. This is a matter in which we have but little experience, and on which no regulations exist, as discharges in the Regular Army are always carried out individually.

When a corps is disbanded, especially in the theatre of war, ample notice should be given and circulated throughout, as many men must be absent in hospital, prison, etc.

A date should be named beyond which pay will not be issued, except to the small staff employed in winding up the regimental accounts, records, etc., and this staff should only draw pay beyond the date of disbandment on the direct authority of Army headquarters.

Before the named date the regiment should be collected at some convenient spot, and disbanded there, the men's accounts being squared, equipment and stores handed in, etc. Each man should leave a permanent address if possible, and should be provided with plain clothes and a free pass to his home.

Sufficient records should be kept to enable medal rolls to be made out, if not already sent in.

These records should be deposited, together with all correspondence, etc., at some central military station.

The staff retained beyond the date of disbandment should be given a named period in which to complete their work.

In individual discharges men should always be sent to their regimental dépôt, and finally settled with there.

FINAL OBSERVATIONS.

The Colonial Forces employed in South Africa suffered, in my opinion, from the want of a sufficient special staff to deal with them, and of a special and carefully thought out organisation and system from the outset.

This was very necessary, seeing that corps were being continually raised in the theatre of war itself, while others were coming from a number of distant Colonies, and in these numerous new creations there were but few officers and non-commissioned officers of previous military experience. To enlist 20,000 men a year is alone a considerable achievement, and requires careful organisation.

When the troops come from several colonies they require some central supervision to ensure some degree of uniformity, and I think a small department dealing only with the organisation of Colonial Forces might be usefully created at the War Office on the occasion of a big war in which contingents on a large scale are furnished by a number of colonies.

Certain broad lines upon which Colonial Forces should be raised should be laid down beforehand, and details of establishment and pay, forms of attestation and discharge, etc., should be fixed and adhered to.

A small handbook for the use of Colonial, and especially of Irregular Forces might be usefully compiled.

An officer of the nature of an Inspector-General

would have been of great use for Colonial Forces in South Africa, and he could have periodically inspected recruiting centres and base and regimental depôts, and also have occasionally visited regiments as they came in from trek, and have set right many small matters that can be better dealt with by personal interviews than by correspondence.

Both the Mounted Infantry and the Imperial Yeomanry had such an Inspector-General, but the Colonial Forces—which aggregated as many men as both put together, and from their nature required such an officer quite as much—had no such official.

If some such measures as I have indicated were taken (and I have omitted a great number of details), the great reserves of strength we undoubtedly possess in our Colonies would be employed in future wars to much greater advantage and far greater efficiency and economy be obtained in regard to them.

JOHN ADYE,
Major R.A. and Brevet Lieut.-Colonial, late
Assistant Adjutant-General C.F., South
Africa.

APPENDIX C.

PRECIS OF EVIDENCE by Colonel A. W. THORNEYCROFT, C.B., lately commanding Thorneycroft's Mounted Infantry.

(For the enclosures referred to in Colonel Thorneycroft's précis, see Appendix Vol., page 343.)

(See Questions 12374-12607.)

Order for formation of Corps.

At 10 p.m. on the 16th October, 1899, when I was serving as D.A.A.G. at Pietermaritzburg, Natal, a telegram arrived from General Sir George White, from Ladysmith, asking me to raise an irregular battalion of 500 mounted rifles.

First steps (17 October).

The "Uitlander Committee" in Pietermaritzburg had for some days previously kept a register in which all men desirous of serving at the front might enrol their names. The register showed previous war service, and where the men had lately been employed, etc. In consultation with the Committee, I decided that selections from this list, which then contained some 300 names, should form the first contingent of recruits.

Difficulty about rate of pay.

A difficulty at once arose with regard to the pay which the men should receive. It has always been the custom in South Africa that privates of irregular corps should receive 5s. per day. The Secretary of State for War, however, wished to pay the men at the ordinary rate received by the British soldier, and this they would not accept. Some offered to serve for nothing in their enthusiasm to get to the front, but it was necessary to start the battalion on a sound and proper basis; so I communicated with Sir George White, who telegraphed to the Secretary of State for War. In the meantime, I made enquiries as to supply of equipment, and horses, drew up a scheme for establishment and organisation, etc., and kept in close touch with the men.

Provisional enlistment (20 October).

As no definite answer had been received about the pay by the 20th October, I decided—with the concurrence of the G.O.C. Lines of Communication—to provisionally enlist the men, as mounted troops were urgently required at the front. A camp was formed in the Agricultural Society's show grounds—which was admirably adapted to the purpose—and on the night of the 20th over 300 men were assembled there. By provisional enlistment I mean that the men were not under any military law, were not tied to serve, but came on my invitation in order that we might proceed with the tests in riding and shooting, and in the necessary preliminary drills, pending the decision about pay. They received rations, were accommodated in tents, and had two blankets each. With the assistance of a number of gentlemen who were applicants for Commissions, a committee was formed to test the riding capabilities of those wishing to join, and for this purpose 50 cobs were drawn from the Remount Department. Another similar committee was formed to test the men in shooting. Rifles and range were borrowed from the Natal Volunteers, and no man was passed unless proficient. The test in both cases was severe. As the men were proved efficient they were drafted into squads; and under the instruction of men of previous experience in Colonial warfare, were drilled in simple formations of Mounted Infantry drill.

This went on till October 27th, when authority arrived to pay the Privates 5s. a day, together with a scale of pay for Officers and Non-Commissioned Officers—marked "A" and attached. By this time there were 400 selected men available in camp.

Enlistment (27 October).

Enlistment was at once begun. Attestation form attached (marked "B").

The clause in the oath "and I further undertake to serve under the penalty of immediate dismissal for inefficiency or misconduct" is a most necessary one.

As the men were enlisted they were drafted to Companies, and in each Company four Sections were formed, each Section being divided into sub-sections of four men each. The men were allowed as much as possible to choose their Company, and comrades were invariably permitted to serve in the same sub-section of fours.

Required considerable care. It has been the custom in some Corps in South Africa in the past to select their own Officers. The system is a bad one, and I would not permit it. The "Uitlander Committee" wished to make the appointments, but such a course was impossible. I had the authority to select the Officers, and to submit their names to the Governor of Natal; and the plan worked well. My object was to secure about half from Officers of experience and tact then serving, or who had served, in the Regular Army, and the other half from colonial or civilians with previous war experience. Unfortunately there were very few Regular Officers available at the time. My Second in Command could not join till after I had got to the front; and the only Regular Officer I had was Captain E. M. Morris, Devonshire Regiment, as Adjutant. Under these circumstances I selected several gentlemen who had been in the Natal Police, etc., and who had been in the Zulu, Basuto, Matabele, and other South African wars, as Subalterns. They were acquainted with the history of many of the other applicants, having served with them; and I nominated those whom I thought fit for Subaltern's rank only; Captain's Commissions being reserved till I had opportunity of observing their various merits. By this means about half of the number of Officers required were obtained; the remaining vacancies being gradually filled up by selections from Officers of Yeomanry who had come out from England to seek employment, Officers of the Indian Staff Corps—who had brought out horses and syces and who then became available, Officers of the Regular Army who could be spared from their Regiments, a number of gentlemen from Rhodesia with whom I had communicated, and who were thoroughly experienced in South African warfare, and several gentlemen from Australia and other Colonies who came out directly war was declared, on the chance of employment. Subsequently, as vacancies occurred, many Commissions were given from the Ranks for distinguished service in the field. I go into these details as I consider one of the most vital points in raising an Irregular Corps is the selection of qualified Officers of tact and discretion, and who can command the respect and confidence of the men for whose lives they are responsible.

The only Non-Commissioned Officer of Regulars available was Squadron Sergeant-Major Chadburn, 11th Hussars, who was appointed Regimental Sergeant-Major. The remainder of the Non-Commissioned Officers were first appointed with acting rank only—permanent rank being given when they had proved their ability; if they failed, they resumed their place in the ranks and others were tried.

The Battalion was completed to its full strength by the 7th November, in Non-Commissioned Officers and men. For establishment, see enclosure marked "C."

In the meanwhile instruction in drill was rapidly proceeded with, only the most simple movements being taught; great care, however, was taken to teach the men to mount and dismount rapidly, and to bring the led horses up quickly from cover. After a week the Companies were drilled together, and practised in out-post duties and reconnaissance.

In conjunction with the drill, practice with ball ammunition was carried out at unknown ranges, with small objects as targets, and the horses were taught to stand fire by a considerable expenditure of blank ammunition.

Cobs and ponies were issued as fast as we were ready for them from the Remount Department at Pietermaritzburg; fortunately they were nearly all South African Colonial bred, and though some of them were small

they stood the hard work and heavy weights remarkably well. A very large number of them were still in the ranks after a year of arduous campaigning, and some survived throughout the whole war. Too much cannot be said in praise of the South African Colonial bred pony.

The ponies were at first in open sheds in the Agricultural Society's grounds, and afterwards picketed in camp outside Pietermaritzburg till the Battalion moved to the front.

Directly the men were enlisted, arrangements were made to draw such arms, equipment, and clothing as could be procured from the Ordnance Department at Pietermaritzburg. Those articles which were not in store were procured locally, or from the nearest available place.

A complete report upon the equipment and clothing was submitted to the Director-General of Ordnance at his request, and I attach a copy (marked "D").

The following remarks are in further explanation:— I was fortunate in securing the services of two thoroughly good business men as Quartermaster and Quartermaster-Sergeant, who kept a good account of all articles drawn from store and issued to the men; a matter of no small difficulty.

There were no rifles available for issue from the Ordnance, but 500 Martini-Enfields, Mark III, with long bayonets, were procured from the Natal Volunteer Armoury.

There were none available, but my relations in England sent out two 303 Maxim guns mounted on tripods, with pack saddles and ammunition complete. I afterwards borrowed from the Colt Gun Company three 303 guns (Colt), mounted on Dundonald carriages. (See report marked "D.")

Very few were procurable, but I fortunately had 18 good telescopes, as used for deer-stalking, and 24 pairs of Zeiss glasses sent out by my brother, and these proved invaluable. It is impossible for scouts to obtain reliable information without them, and all Regiments should have an ample supply both in times of peace as well as in war, as it is as necessary to train men to the use of telescopes and field-glasses as it is to train them in the use of the rifle. (See report marked "D.")

One per man to carry 50 rounds were also procured from the Natal Volunteer Armoury (special web material made in South America). They were serviceable, but had a bucket attachment for a carbine which was of little use for long rifle; but we could get no other bandoliers at the time.

Infantry pattern from the Ordnance Department. This pattern of pouch is useless for Mounted Infantry.

There were very few saddles and bridles available in store, so practically the whole number required to equip the Battalion had to be bought locally in Pietermaritzburg; these were necessarily of an inferior quality, made of bad leather, saddles with weak trees, etc., etc.; but none others were available, and mounted troops were urgently required, so we had to take the field with what we could get.

Part of the harness had to be made locally, and was inferior; the remainder was of excellent quality.

Issued from the Ordnance Department, and were serviceable (see report marked "D," which deals with all articles in use).

All clothing which was available in Government store was issued, but a number of articles had to be purchased locally. As these, especially the breeches, were of inferior quality, they were replaced as soon as possible. (For report on clothing see report "D.")

The following articles were issued to each man:

Ankle boots	-	-	-	-	-	2 pairs.
(One pair is sufficient if good.)						
Breeches	-	-	-	-	-	1 pair.
Braces	-	-	-	-	-	1 pair.
Bandolier	-	-	-	-	-	1
Bayonet and scabbard	-	-	-	-	-	1
Bridle	-	-	-	-	-	1
Blankets	-	-	-	-	-	2
Drawers	-	-	-	-	-	2 pairs.
Descriptive card	-	-	-	-	-	1
Emergency ration	-	-	-	-	-	1
Frocks, khaki	-	-	-	-	-	2
(One is sufficient unless spare one is carried on wagon.)						

Flannel belt	-	-	-	-	-	1
Field dressing	-	-	-	-	-	1
Forage cap	-	-	-	-	-	1
Helmet	-	-	-	-	-	1
(Pattern is bad.)						
Haversack	-	-	-	-	-	1
Housewife	-	-	-	-	-	1
Holdall, with knife, fork, spoon, and comb	-	-	-	-	-	1
Horse-rubber	-	-	-	-	-	1
Horse brush and curry comb	-	-	-	-	-	1
Hoof-picker	-	-	-	-	-	1
Jack spurs	-	-	-	-	-	1 pair.
Jersey	-	-	-	-	-	1
Knife, pocket	-	-	-	-	-	1
Laces, boot (spare)	-	-	-	-	-	1 pair.
Mess-tin and strap	-	-	-	-	-	1
Neck strap and reim	-	-	-	-	-	1
Nose-bag	-	-	-	-	-	1
Putties	-	-	-	-	-	1 pair.
(Leather gaiters would have been better.)						
Pouch for ammunition	-	-	-	-	-	1
Rifle, with pull-through and oil bottle	-	-	-	-	-	1
Rifle bucket	-	-	-	-	-	1
Shirts, flannel	-	-	-	-	-	2
Socks	-	-	-	-	-	2 pairs.
Shoes, canvas	-	-	-	-	-	1 pair.
Stable sponge	-	-	-	-	-	1
Saddle complete	-	-	-	-	-	1
Saddle blanket	-	-	-	-	-	1
Soap, pieces	-	-	-	-	-	1
Towels	-	-	-	-	-	2
Tin of grease	-	-	-	-	-	1
Trousers	-	-	-	-	-	1 pair.
(Not wanted.)						
Waistbelt and frog	-	-	-	-	-	1
Water-bottle	-	-	-	-	-	1
Waterproof	-	-	-	-	-	1
Warm coat (British)	-	-	-	-	-	1
Waterproof sheet	-	-	-	-	-	1

A very large majority of the men who joined had long Colonial experience; many of them had travelled extensively in the interior in search of big game, prospecting expeditions, etc., and were experienced rifle shots. Every opportunity was taken to improve their efficiency by practice in field firing, Loyd-Lindsay competitions, etc., always at unknown ranges, and at small targets not larger than the head and shoulders of a man. On the whole I consider that the shooting was satisfactory; but if I had had more time to train the men I should have made a speciality of snaphooting at short ranges.

The test which the men had to pass before enlistment threw out all men who were indifferent riders; and so the efficiency of the Battalion in riding was distinctly good.

The class of men enlisted was of a high character, the majority were accustomed to have horses of their own, and could afford Kaffirs to look after them; they were therefore unaccustomed to groom their own horses. Knowing this, I impressed on the men the necessity of personally looking after their own mounts, so that they might remain efficient in the field; at the same time pointing out that they were well mounted on a fair class of country-bred ponies, and that it was not likely that remounts of the same class would be forthcoming as the campaign proceeded, and the country-bred became more difficult to procure. The men took this to heart; and although they disliked the routine of "stables," they gradually saw the absolute necessity of careful stable management, which was strictly carried out under the supervision of the Company Officers. Notwithstanding the inferior class of saddles at first in use, there were very few sore backs, and every man knew that if his horse became inefficient by his neglect, he would not get another at once, but would be left out of the fighting for a time—and so it became a disgrace to be left without a horse. The forage supplied was good; and notwithstanding the hard work and the heavy weights which the ponies had to carry, they improved in condition; and many men prided themselves that they rode the same pony for a year or more in the campaign, and the necessity of careful stable management was fully understood and loyally carried out.

In the first stages of the war—that is, in the first few weeks—the men thought little of cover; those of them who had been under fire before had mostly experienced the indifferent shooting of Kaffir warfare, but the necessity of cover was soon brought home; and

Appendix C.

Qualities in respect of shooting.

Riding.

Horse-mastership.

Skill in entrenchment and taking cover.

Appendix C. where the natural features of the country were insufficient, they very rapidly grew expert in improvising defences. Those who had had the opportunity of big game shooting—and they formed a considerable body—brought their experience to bear in the use of ground, as in stalking, and it became a custom in the Battalion to think “how can we best inflict loss on the enemy with the least possible loss to ourselves?”

Entrenching tools were carried on the Scotch carts provided for ammunition, which were always in the first line of transport.

Scouting.

The great advantage which South African Colonials had over others in scouting is apparent to anyone. Accustomed for years to the veldt, they were able to observe what would to the ordinary person have been unrecognisable. Their individuality, unhampered by any training save that of necessity, had accustomed them to observe for themselves, and by the intelligent use of telescopes and field glasses with which I supplied my men they were able to obtain much valuable information. Then again many were expert in the knowledge of “spoor,” telling on examination the approximate number of men, horses, or wagons which had passed, the way they were going—and in some degree the speed—all valuable information. Again, many could speak either Kaffir or Dutch, or both, and so acquire information from Kaffirs in the field or at their kraals, or at farms as they passed.

These qualities, combined with a natural desire to gain credit for their Corps by obtaining *trustworthy* intelligence—sometimes acquired by stealth, at others by dash—made the men most valuable as scouts.

Although a large number came from Johannesburg, they were by no means “town bred”; nearly all of them had experience in many parts of Africa, and were merely drawn to Johannesburg in pursuit of business. Several of them had been specially employed as scouts in the Matabele war, and nearly all of the men could find their way about at night.

By being able to select my own Officers, I was able to obtain from British Regiments, Indian Staff Corps, and picked Colonials, officers thoroughly experienced in reconnoitring and sketching, and under their leadership much good work was accomplished.

General physique.

Exceptionally good. A careful medical examination was made before any recruit was passed. The men were somewhat heavy for the ponies, but that could not be helped. On the whole there was very little sickness.

Morale.

The discipline of the Battalion was of a high order, and I attribute this in no small degree to the fact that the men had thorough confidence in the officers and non-commissioned officers who led them. The question of officers is, as I have said before, one of supreme importance. By their example they gave a tone and bearing which was eagerly followed by the men, and so the whole Battalion became imbued with the true feeling of *esprit de corps*, moral superiority, and confidence in themselves so essential to the well-being of any corps as an efficient fighting unit. There were cases of spies of the enemy who made every endeavour to become members of the Battalion, but these men were discovered and removed.

Intelligence of officers and men.

I was very much struck by the individuality displayed by all ranks. A very large number of both Officers and Men had previous war experience, not only in South Africa, but in many other countries; so no tedious efforts at teaching drill were necessary. The standard of education was high, and all quickly fell into their places, bringing their intelligence to bear on all points, the one idea being to get to the front and there prove their worth. With such a spirit prevailing the Command of the Battalion was an easy matter.

POINTS TO BE NOTED IN THE RECRUITING, TRAINING, AND EQUIPMENT OF OFFICERS AND MEN OF A COLONIAL FORCE.

(1) The selection of Officers is the vital point. No political or other influence which may be brought to bear should in any way impair the judgment of the Officer who is responsible for the efficiency of the Corps.

(2) The necessity of a Regimental Paymaster is most apparent. This Officer should himself pay the men, keep the pay lists and accounts, and so relieve the combatant Officers of a duty which it is impossible for them to perform efficiently in war, and which in peace takes up a great deal of their time which would be better employed in the intelligent training of their men. I adopted this method with excellent results.

(3) It is essential that a thorough test in riding and shooting should be insisted upon before enlistment. In the Colonies most men can ride, but rifle shooting wants further encouragement. Ammunition should be provided at reduced rates to any organised rifle clubs, provided that it is expended in such practices as are conducive to efficiency in war, and not fired away at large targets at known ranges.

(4) A careful medical examination is, of course, a necessity.

(5) Complete equipment and clothing of the very best materials should be forthcoming; it is absurd to expect high efficiency with indifferent materials bought at haphazard in an emergency. (For suggestions on equipment and clothing, see report marked “D.”)

(6) The rifle should be a short one, about 42 inches in total length, sighted up to 2,500 yards, encased in wood with few projections so that it can be easily slung on the back, magazine to carry five rounds, protection for foresight, and double pull-off. The rifle to be made in three sizes of stocks to suit men with long or short arms.

Bayonet, present pattern, but a little longer.

(7) Whether a Regiment is to work independently, or in a Brigade of Colonials, a thoroughly efficient intelligence department is necessary, under a specially selected Officer with white and native scouts under him. Ample funds for the establishment of secret agents in the country to be operated in should be provided.

(8) For report on Horses, Mules, Oxen, Saddles, Veterinary Stores, Forage, etc., see enclosure marked “E.”

(9) The Regimental Medical Establishment was satisfactory. One Doctor, one Sergeant, and two Privates as orderlies, with four men per Company as stretcher bearers, and one large Regimental Ambulance; but there should be in addition a light ambulance to accompany patrols.

(10) In a Colonial Corps it is difficult to enlist or maintain an efficient number of signallers. On the outbreak of war there is no time to train them. I had a number of telegraphists who soon learnt to use the flag, but for the heliograph and lamp had to eventually obtain trained signallers from the Regular Army. The question of signallers is of great importance, and no system of outposts or reconnaissance can be efficiently carried out without them.

(11) Maps of the country to be operated in are an absolute necessity. During the Natal campaign they were almost unprocurable, and most unreliable. Had it not been for the knowledge which some of my Officers and men who had served in the Natal Police, etc., had of the country, I should have been placed in an extremely awkward position in carrying out reconnaissance.

(12) The establishment of a Regimental Mess for the Officers is of great importance. By the social intercourse there established a Commanding Officer is better able to judge of the character and capacity of those under him. Company Messes for Officers, although useful for outpost and detached duties, are not advisable in a Colonial Corps; should it be necessary to send a Company away, a proportion of the Mess kit can be sent with it. I established a Regimental Mess with very excellent results. The Regent's Allowance, as given to the Messes of Regular Regiments, should have been allowed, but I was unable to obtain it.

APPENDIX D.

Appendix D.

PRECIS OF EVIDENCE BY COLONEL M. F. RIMINGTON, C.B.

(See Questions 12608-12824.)

STEPS TAKEN TO RAISE AND EQUIP RIMINGTON'S GUIDES.

Whilst I was on secret service at Bloemfontein for nearly three months, before war commenced, I had many opportunities of finding out the English inhabitants of the Orange Free State who were well disposed to Great Britain.

War being imminent, in accordance with my instructions I left the Free State and at once applied for permission to raise and equip a corps of white guides and scouts.

This was granted about October 3rd, 1899, and was to be carried out *sub rosa* and the assistance of Captain Gale, R.A., Captain Rankin, 7th Hussars (Dr. Lindley and Officers, Adjutants, etc.), and later Lieut. Chester Master, Rifle Brigade, A.D.C. to Lord Milner, was obtained. Information to this effect was sent through to friends in the Transvaal and Orange Free State, and recruiting was started in Cape Town and Port Elizabeth.

The headquarters were at Naauwport, about 40 miles south of the Orange River, and there every man was seen, inspected, and examined as to his ability by me personally.

QUALIFICATIONS DEMANDED FROM MEN.

- (1) As guide to some part of the Orange Free State and Transvaal.
 - (2) As to ability to speak Dutch or a native tongue.
 - (3) As to shooting and riding.
- (Tested in each.)

If satisfactory they were medically examined and sworn in, and signed on for the duration of the war.

They were immediately equipped and drilled every morning, and in several cases men from the Border Colonials were sent out the same evening as enlisted on scouting expeditions of 40 miles to the border.

PRECAUTIONS AGAINST SPIES.

To prevent any spies enlisting, no man was taken unless personally known to myself or answered for by two members of the corps, or unless he could furnish references from persons such as I knew were responsible; for instance, the Secretary of the Uitlanders Committee.

In one case a man, sent by the Intelligence officers at Cape Town, was objected to by several of the N.C.O.'s and men as a suspicious person, and at once sent back to Cape Town as a suspect. Several others were refused as suspected persons.

Every officer and man was on the watch for spies, and I can state positively that no spy was enlisted in my corps.

A very large number of applicants were refused, about one only in five being accepted. Quality and not quantity was desired. Thus a very hardy, good lot of men were enlisted, and afterwards, when we were fighting every day, the least evidence of want of pluck or nerve was followed by instant dismissal.

Insubordination of a serious nature was very severely punished or the delinquent dismissed. As there were many applicants, this caused no inconvenience. Age was no bar to selection, and several men of over 60 years of age proved magnificent scouts.

HORSES.

Permission was obtained for men to provide their own horses, and to be paid 5s. per diem for use of same, and thus many bought the best horses obtainable, in some cases men bought two. All horses were passed by me personally as suitable, and were valued by me for

Government, and registered in a horse book. Later, when stealing horses became common, proved receipts were demanded by me.

Two advantages accrued (as was foreseen by me) when asking for permission for this, from this system:— (1) The men got good colonial horses, in many cases race horses and racing ponies; and (2) they looked after their horses well, and so set an example to those men who did not provide their own horses.

Without regular officers of strict disposition this system would have been impossible; having them, it succeeded, though at the cost of much trouble.

- (1) Horse management was strictly attended to by the officers.
- (2) Grazing was always resorted to at every possible chance.
- (3) The men never allowed to sit on their horses at the halt.
- (4) Always made to off-saddle at every opportunity, even for five minutes.
- (5) The kit carried on the horse reduced to the minimum.
- (6) They were made to dismount and walk *down* (never up) all hills. Thus a good system was established, and our horses continued in good condition throughout the war, and many of them (one of my own included) lasted throughout the campaign, and are still fit and well.

In a campaign horse management is absolutely the first thing to be considered by mounted troops. Men who give sore backs should not be at once remounted or sent to a base, whether horses are available or not, but should be made to walk for at least 10 or 14 days, and be made to go on picquet on arrival at camp.

With all mounted troops extreme severity and absolute disregard for the men's health, feelings, or safety is necessary in this respect; because good horses are scarcer than men in a long campaign.

EQUIPMENT, TRANSPORT, ETC.,

The transport wagons, mules, harness, etc., were purchased by me at Naauwport, and the mules cost on an average £10 less than contract price, £35. I bought small mules, which were found to last and pull best, and I only took seasoned animals.

On white team (10 mules) worked to the end of the war to my own knowledge. I had picked Cape boy drivers, and a good Dutchman as conductor, and my wagons could do 40 miles in a day, without casualty, and never fail to get up to my bivouac at night, however long the march.

ARMS.

The men were armed with Martini-Enfield carbines (no magazine), and carried 100 to 120 rounds in bandoliers. I found the Martini-Enfield carbine shot well, was very light, and would carry and kill as far as any ordinary man could see to shoot, viz., at 1,800 and 2,000 yards.

I entirely dissent from the theory that a rifle should be preferred to a carbine for mounted troops. Amongst my corps were some nearly perfect rifle shots, and they invariably preferred and carried a carbine.

Carbines were carried slung over the shoulder.

A certain number of men carried their own pistols, or some (of the proportion) of revolvers, pistols, issued to them.

Appendix D

SPYGLASSES.

About 10 per cent of binoculars and telescopes were provided by the Ordnance, but nearly 120 were obtained about six months after the war commenced by a public appeal in England through the press, and were absolutely invaluable. Glasses at once double or treble a scout's value, and are indispensable.

Officers were forbidden to unduly expose themselves in the firing line, it being pointed out that there was no reason that they should thus pay a bad compliment to the courage of the men, who were presumably as regardless of bullets as they were, and that the chief object was :—(1) To kill the enemy without being killed or wounded themselves; and (2) to gain information unknown to the enemy.

All scouting parties sent out by me left at night, and got into some place where they could see and not be seen before dawn.

The whole available officers and men turned out practically every day, and certainly five days per week throughout the war, two or three hours before dawn, when we were in touch with the enemy, and scouted up as near to them as possible before dawn, remained in observation till the evening picquets were withdrawn, most days engaging the enemy's scouts and exchanging shots.

Later in the day the bulk of our men were withdrawn as quietly as possible, leaving parties in observation till after dusk.

If our parties once got into position before dawn, and some remained till after dusk, the Boers did not attempt to get up to their positions, and they could be got into again every day before dawn without loss.

Every man was encouraged to take every opportunity of observing the enemy, and to collect and report information, especially from native sources, with regard to the enemy.

Though for scouting and fighting against Boer mounted infantry my Guides were all that I could wish for, and though, later, I found no difficulty in galloping at and storming, carbine in hand, any temporary Boer position with them, I am positively certain that they, being untrained in shock tactics, and having no personal weapon, would have had no chance whatever against well trained, well mounted, and well led Regular Cavalry, half their number.

I say this after being engaged, when in command of these men, on approximately 120 days. Later I commanded the Inniskilling Dragoons, and found that, though for individual shooting and scouting they could not compare with those born and accustomed to the veldt, and able to get information from every native, that well-mounted, well-trained, Regular Cavalry in action were worth double their number of M.I. (whether Boers or British).

I wish particularly to draw attention to this, as since I came back to England I have heard many individuals express opinions which show that they had no conception that such was the case, and it appears to me that there would be a very rude awakening if M.I. attempted to hold their own against Regular European Cavalry trained, say, for instance, on the German system.

One point, very generally lost sight of, is that the small bullet does not kill or stop horses or men in the great majority of "hits."

The other point being that dismounted men (whose horses are near) are apt to take up a long front without reserves, and so, when a flank attack most likely takes place on them, they are extremely vulnerable, as they have no defensive power.

Later in the war, whilst in command of a mobile force, I had the 3rd New South Wales Mounted Rifles under my command, some 800 to 900 in number. These men were practically ready-made cavalry, and by cavalry I mean :—

1st. Good horse managers.

2nd. Good riders.

3rd. Men able to ride at the enemy and use a personal weapon.

And I formed the opinion that Australia, New Zealand, Canada, and South Africa can supply enormous numbers of good cavalry if only they are encouraged

in peace to drill as cavalry, and on all possible opportunities to gallop at the enemy and to use a personal weapon.

Acting on these lines, I on several occasions directed the 3rd N.S.W.M.R. to charge their enemy mounted with fixed bayonets. The Boers would not stand up to this, and like all recourse to *l'arme blanche*, it increased the morale of my men.

For mounted troops in the Colonies I advocate cavalry drill in squadron columns, etc., a short rifle, or, better, a carbine, and a sword, whose handle is made like a bayonet handle, so as to fix on to the carbine, this being especially useful for defence against a rush at night.

EQUIPMENT.

My equipment was purchased locally or drawn from Ordnance stores. I was specially fortunate in obtaining Colonial pattern saddles.

These can be made to fit any horse by means of stuffing the panel with hay, wool, or hair, one of which we could always obtain.

The general Service pattern saddle is not a suitable saddle for the well-bred riding class of horse, because :—

1st. Nearly every horse's back is differently shaped, and therefore requires a differently shaped sideboard (if the saddle is to give equal pressure throughout), e.g., some horses have hollow backs, and need a greater bend in the sideboard, others have a more or less straight back, and require a straight sideboard.

Then many horses are very narrow, and require the sideboards set nearer together and at a different angle.

To meet these differences there are three sizes in the arches for all horses. If a stripped saddle is put on a horse's back and the sideboard is found to press hard on one point, no blanket or numnah will do much to alter it. In practice on service blankets are almost useless for this purpose.

2nd. General Service pattern saddles are too short in the seat, and make men ride too much on their fork, and not sitting on the bones of the pelvis with the knees well forward; so they tire the men, who consequently tire their horses.

The opinion formed was that a really well-made Colonial pattern saddle in four sizes, with plain knee-flap cut well forward and a long seat, with hair-stuffed and leather-covered panels, and a leather cinch girth, would be the very greatest economy if generally adopted for riding horses.

WATERCARTS.

I altogether discouraged the use of watercarts, as useless and cumbersome, and disseminating enteric.

My men were remarkably free from enteric, but I invariably tried to keep as far as possible away from towns, and up stream, if possible; the men, being Colonials, did not drink much water except in the form of tea or coffee.

COLONIAL OFFICERS.

I found nearly all Colonial officers, whether S.A., Canadian, or Australian, very quick, brave, able to act on their own responsibility, and prepared to run any show, however big. They are specially good with horses, mules, cattle, and transport.

As to interior economy and discipline, they are generally untrained, and under great difficulties with regard to men who come from their own towns or villages, and who are often their equals in social standing.

A certain amount of training in England with Regulars is a great advantage to them, and gives them much greater control over and authority with their subordinates.

They appreciate and respect Imperial officers who are rough and ready, and good horsemen and scouts.

I think really good N.C.O.s from England would help Colonial troops in their drill, training, and orderly-room work to a very great degree.

Generally speaking, the line to be adopted in training Colonial mounted troops would appear to be—

- (1) Teach all to shoot.
- (2) Take all the best riders in squadrons, and teach them the use of a personal weapon, and make them into a troop of swordsmen for shock tactics as cavalry.
- (3) Gradually work more up to the highest standard of cavalry, and thus "leaven the whole lump."

NOTES ON HORSEMANSHIP.

I found throughout the war, with all sorts of troops and all ranks, that care of horses comes naturally to very few men except those brought up from boyhood with horses.

As a rule, all other soldiers only do what they are compelled to do, and at best regard the care of their horses as a very weary and irksome necessity.

This points to the fact that in the future we must, as far as possible, pick only men brought up to and accustomed to horses as recruits for the mounted branches, and this is especially necessary with a three years' service system.

Three years with this proviso is enough to train a cavalry soldier, especially if, as often occurs, he goes back to work with horses in the Reserve.

CARRYING OUT FIELD IMPRISONMENT.

This should not be entrusted to a prisoner's own corps, where, when on service, he can get food from his friends, and is often let down easily. The penalty is thus unequal in corps.

The Provost Marshal should have charge of these prisoners, and he can and must make field imprisonment No. 1 severe enough to frighten offenders as much as the lash for which it has been substituted.

OPERATIONS.

Appendix D.

Under my command Rimington's Guides took part in the following engagements and operations:—

With Lord Methuen—

Belmont	-	-	-	-	-	Clasp.
Graspan.						
Modder River						Clasp.
Magersfontein.						

With General French—

Colesberg (about three weeks' constant fighting).						
Relief of Kimberley	-	-	-	-	-	Clasp.
Paardeburg	-	-	-	-	-	Clasp.
Poplar Grove.						
Driefontein						Clasp.
Bloemfontein.						

With General Broadwood—

Sanna's Post (in rear guard).

With General E. Hutton—

Brandfort.
Vet River.
Sand River.
Kroonstad.

With General Ian Hamilton—

Lindley.						
Heilbron.						
Doornkop.						
Johannesburg						Clasp.
Pretoria.						
Diamond Hill.						Clasp.
Heidelberg.						

With General Sir A. Hunter—

Bethlehem.						
Wittebergen	-	-	-	-	-	Clasp.

With General Bruce Hamilton—

Operations in Northern Free State till January, 1901.

Appendix E.

APPENDIX E.

NOTES ON REMOUNT OPERATIONS BY COLONEL T. DEANE, C.B., BASED ON HIS EXPERIENCE AS DIRECTOR OF THE ARMY REMOUNT DEPARTMENT IN INDIA; CHIEF STAFF OFFICER IMPERIAL YEOMANRY, HOME; AND SPECIAL SERVICE IMPERIAL YEOMANRY, SOUTH AFRICA.

(Handed in at Question 13087).

Perhaps the experience which I have gained as Director of the Army Remount Department in India may be useful to the Commission, if I explain a few facts in regard to the remount operations, which have occurred to me in reading the various reports on remount affairs during the past war.

It is manifest that in a campaign like the past one, the Director of the Remount Department must have been responsible, to a considerable extent, for the successful operations of war. Lord Roberts telegraphed from South Africa that he could do nothing in that country without a mobile army, and mobility depended on the supply of horses. This supply had to be arranged for by the Director. In India his responsibility is clearly fixed. One of his chief duties is that of preparing mobilization tables, which are printed in what is known in India as the Field Service Departmental Code, "Remounts" and its confidential supplement. In these manuals are shown the requirements of the various branches of the Mounted Services in peace and war with the number of horses required to make good those which are eliminated at the commencement of a campaign on account of age and other causes. Those are the first requirements made good. The next is to bring the units of the Field Army up to the war strength, and after that is done, to provide for the probable amount of casualties during war. After the Field Army is brought up to its proper strength from units which are depleted for that purpose, it becomes the duty of the Director to arrange for horses to make good the depletion referred to, and field casualties. All these tables are carefully worked out in peace time, so that it may be told at a glance how many horses are required for a regiment, battery, brigade, division, army corps, or any other force which may have to take the field. No calculations have been made in the tables referred to, which would have met, or anything like met the casualties during the past war. During the Crimean campaign the casualties amounted to 80 per cent., and during the past war it has been noted that they have amounted to 120 per cent. The calculations of the Indian Remount Department have hitherto been much less than this. However, provision for casualties should always be made with reference to the conduct of operations from month to month, the proportion being increased as the casualties occur. I do not know whether such tables as these have been prepared in the War Office or not, but manifestly, as a guide they are most necessary for the proper administration of remount affairs; and if they have not been prepared, I venture to suggest that they should be taken in hand. The next requirement of the Remount Department to be arranged by the Director is clear printed instructions in regard to the duties of a purchasing officer. These find a place in the Remount Manuals which are prepared in India for the guidance of all purchasing officers and depot superintendents. They are most elaborate, and if strictly adhered to, it is almost impossible for officers to make mistakes. I have found that the best purchasing officers are those who most closely attend to these instructions. They are based on many years' experience, and would apply to the purchase of horses of almost any class. Complaint has been made during the past remount operations, this war, that purchasing officers had no experience, and that therefore they were unable to satisfactorily perform their duties. I do not know what the instructions were regarding rules in the Home Remount Department, but if there should not be any such rules as those alluded to I look upon it as one of the most essential requirements of any future remount system. Every Englishman, and most Irishmen considers himself a better judge of horses

than his neighbour, but I have often found that those who profess to know most really know the least. I am therefore a firm believer in clear instructions, in the use of the tape, the weighing machine, and the instructions referred to, in preference to what is generally supposed to be the value of a good eye for horses.

One of the most important duties of the Director is that of having, in his mobilization manuals, clear information of the various sources of supply from which horses are likely to be obtained. These are printed in the manuals I have alluded to for Indian use. I take, for example, the case of South Africa, where a table is published showing the names of those from whom horses could be obtained, the district in which they are securable, the brands of the horses, and the numbers likely to be obtained within a week's notice, or within a month. Classes are shown as horses fit for light cavalry, mounted infantry, and also mules and ponies; with probable price. Such information would, I have no doubt, have been of some use during the past campaign if resorted to at the proper period. Similarly, information is given as to the sources of supply in Australia and New Zealand, in Persia, and in the various districts throughout India. Other information was obtained in regard to various foreign sources, and is on record in the Director's office, but has not been published in the manuals referred to, because it was unlikely that in war time these distant sources would have been resorted to. I allude to such places as North and South America, Hungary, Syria, and Arabia. Information is available also in regard to the mule supply in these localities, in Spain, Italy, Cyprus and elsewhere. Manifestly, on the occurrence of war references to these tables are of high value. The Indian system is that of constantly referring to the Intelligence Department for any such information as may be required, or if it be not there obtainable, to seek it from the Governments concerned direct. They have always been found ready, through their Consular or diplomatic officers, to supply the fullest information required.

The personnel of the Remount Department is a more difficult one to obtain than is generally supposed. Purchasing officers, depot officers, and conducting officers should all have some experience of their work. It is well known that during the past campaign all officers preferred employment at the front to work in the Remount Department, or in any Department; and therefore even the best officers who might have been available for remount work were not under the circumstances obtainable. It is not easy to make any suggestion in regard to how the remount personnel of the future should be supplied. That will depend upon whether the Department is enlarged or not. The nucleus of a good staff is the great thing to commence with, but the present staff of the Remount Department at home is very small, and quite inadequate to supply what is required. It is understood, however, that it has been proposed to spend a sum of £200,000 in enlarging it, but I believe only about £7,000 has been made available for the purpose. The supply of the personnel will greatly depend also upon the provision of some war reserve horses. There is, I understand, no such reserve at home, and it is doubtful whether any such will be provided. This seems a mistake, as, for India, where the war strength of units is stronger than in England, a reserve of 1,000 Australian horses is allowed in addition to the up-keep of about the current year's supply for acclimatisation. The reserve consists of seasoned horses trained and almost ready to join the ranks at once. One of the great defects of the supply during the past war was that horses were purchased in most directions straight off the grass, and comparatively

tew, hard, and ready for work. Those which had undergone training, such as were obtained from the omnibus companies in London, did the best work, and I think that had it been possible to obtain a larger supply of horses in hard condition, the results would have been better. No doubt if the large contractors in England had been more freely resorted to, horses of this class might have been obtained in larger numbers; not young, perhaps, which was unnecessary for a year or two's work, but of a mature age, between six and ten, would have certainly been more valuable than the raw material. If in the future, Yeomanry and mounted infantry, are to be trained in the way they should be, it would appear that a reserve of horses might be suitably kept up, and utilised during peace time for their training.

I venture to refer to the necessity of the Director always having an adequate staff for administration purposes, and apart from the executive staff. Without this it is impossible for him to properly conduct his duties. I observe in one of the official reports of the past operations, that up to May, 1900, he was only allowed the services of one officer. What he was subsequently allowed I do not know, but I should have been sorry to have attempted to conduct all the vast operations he had to control, without the assistance of five or six officers of very good business capacity. That, and the provision of suitable accommodation for them, appears one of the first requirements. I refer to this matter as it has been prominently noticed in the proceedings of a recent Court of Enquiry. If a suitable staff were provided, it would be a comparatively easy matter to divide the work into the various branches, and to organise it accordingly.

With regard to South Africa, I have some diffidence in making any remarks on remount affairs connected therewith as I was not at any time concerned in remount matters; though the subject, from my antecedents, was of intense interest to me. I hope, therefore, I may be pardoned for noticing one or two points which appeared to me strange. The authority of the Director at home seemed not to extend to the administration of remount affairs in South Africa to the extent which it might have suitably done; that is to say, he did not appear to be sufficiently in official communication with officers there who were purchasing horses, and who could best have let him know the state of affairs, both in regard to casualties, demands, &c. In one instance that I know of, for example, an officer was purchasing horses in Australia without any reference to him. Constant daily communications should have passed between the officers in South Africa and the Director, in addition to which he might have been suitably placed in direct communication with the officers in chief command in that country, those in command of the lines of communication, &c. I was also struck by the apparent absence of any controlling remount authority in South Africa. There was at the head of affairs a very able, energetic officer with the rank of Assistant Adjutant General for remounts. Considering, however, the importance of remount matters in that country, what was necessary appeared to me to be the appointment of an officer not under the rank of Major-General, with central controlling authority, and in constant touch with the Director at home. It is very difficult indeed, even were such an appointment to have been made, to have given such an officer absolute authority to say that horses would not be sent from the chief depots on, or near the sea-board until they were fit for work, but I think that this would have been his first duty. It is unnecessary, perhaps, to refer to reports on record which show how short a time a horse lasted, in consequence of having been hurriedly sent to the front. There is ample on record to show that this was a serious mistake. The delay involved in getting horses ready would really, in the end, have been no delay at all, for they would have been more fit for the work which they had to do. It was apparent also that near the seaports of Cape Town, Port Elizabeth, East London and Durban, there should have been a far greater reserve. It is easy to be wise after the event, but certainly during the first six months of the war it might have been apparent that, distributed amongst those four places, it would have been well to have had at least 100,000 horses to call upon. It must be remembered that many of these horses were not only unacclimatised, but untrained. Speaking of Australians I can confidently say that during my ten years' experience as Director in India, I have invariably found that the horses which were supposed to be the best trained and most ready for work as imported by the shippers, were the worst and most difficult to train. The percentage of really broken

horses obtained from this source was very small indeed. Unbroken Horses.

The depôts beyond the base were of two kinds: Advanced, or Issuing Depôts, and Resuscitating Depôts. As a matter of fact, all those beyond the sea-board might have been termed Resuscitating Depôts, as few of the horses issued from them were really fit for immediate work. Nevertheless, the wants of the Army had to be met, and they had therefore to be issued and the best made of the necessary state of affairs. Depôts.

Another complication observable in the supply is that, according to the English Field Service Tables, or Yellow Book as it is termed by Colonel Birbeck, the Director of Transport is supposed to be responsible for these depôts and indeed, that he shall control both remount and veterinary services. As a matter of fact it has been shown that he controls neither the one nor the other, and very rightly too. The work of the Remount Department should be controlled by an officer of authority, in somewhat the manner suggested, and it would be suitable, probably, if he were allowed to, also to control the Veterinary Depôts, as has been so well suggested by Colonel Birbeck. Director of Transport.

With regard to establishments, as separate from the Establish- officer personnel, the English war service tables show what they should be for Base and Advance Depôts. It is notable that the men sent out to form these Depôts were, in the Remount Service, as they were indeed for the Yeomanry, taken for work at the front. Only skeletons therefore remained, and these had to be made good by the supply of native labour when it could be obtained. Subsequently cadres of Depôts were sent out, and formed the nucleus of what was required for the various Depôts. Nominally the Army Service Corps is supposed to supply the establishments required for the Remount Depôts, but often the men were not forthcoming in sufficient numbers. The Depôts were therefore under very great disadvantage in all matters connected with their management and supply of horses. In future it would appear advisable to supply the cadres of Depôts to the extent necessary, at all events in Non-com- missioned Officers, Conductors, &c., and to recruit the remainder in foreign countries from local labour. Other- wise there will always be a temptation to withdraw from Remount Depôts men of the combatant class for the front. It was observable that the Remount Department was called upon to train nearly all the horses which issued to the mounted units, and, as shown, comparatively few of these were received trained. The work of training alone was therefore very heavy, and this is a duty which I think should not in future devolve upon the Remount Department, but depôts should be formed for the purpose on the advance lines, and men should be supplied therefore to train the horses for the mounted units, and take them away as ready. As a matter of fact, large numbers of men had to remain dismounted and unemployed until horses were ready for them, and it would have been much better to have employed them in training, at selected places adjacent to the Remount Depôts. Cadres necessary at first. Training Remounts.

The work of the Remount Department in connection with the supply of mules was vast, quite irrespective of the supply of remounts. The tables show that up to the 31st January, 1902, over 94,000 mules were supplied by the Remount Department, and they were of a very admirable class. It is worthy of consideration whether, when Remount duties in horses alone have to be conducted on such a large scale as during the past campaign, it would not be desirable to place the supply of mule transport in the hands of the Army Service Corps. This is the system in India, where the Transport Department supplies its own transport, the Remount Department being only concerned in the supply of horses, and a comparatively few mules for the mounted batteries. Had the Remount Department been relieved of the supply of mules during the past campaign, doubtless it would have had more time to arrange for the large supply of horses required. Supply of Mules, Army Service Corps.

The arrangements for the transport of horses by rail struck me as being of a very defective character, in comparison with the arrangements for the transport of horses in India. No doubt the best had to be made of things as they were, and every truck or wagon had to be utilised for the transport of men and munitions to the front; but the way that the horses were conveyed by rail caused very much delay, which perhaps might have been avoided. The wagons were so unsuited for the conveyance of horses that the remounts had to be unloaded at the various halting stations on the lines of railway, as shown in the official reports. The business Detraining. Rail Trans- port.

Appendix E. of entraining and detraining unbroken horses took up much time, and very little was done in the way of feeding or watering the horses whilst in the wagons. This was due to the trucks being unsuited for the conveyance of horses. They were as a rule placed almost anyhow in the trucks, generally ten in each. In India covered wagons are, at a very small cost, made susceptible of carrying horses, and they are placed therein head to head, with two bars in the centre, and a passage for the attendants, and for forage, feeding troughs and water. By this means it is possible to transport remounts for long distances without detraining; and provided the horses are carefully fed and watered *en route*, there is no difficulty in keeping them on board the train for many days. One of the first requirements, therefore, of transport in the future, is to see that the wagons and trucks are thus converted. This has been already recognised as a necessity, as I see that Colonel Girouard has given orders for the conversion of wagons in South Africa in this manner, as has been recommended by the Remount Department. This was one of the matters on which a Director on the spot, with authority, might doubtless have made arrangements, as time and money would have been thereby saved during the first six months or year of the campaign. In comparison with this deficient rail transport, the transport of horses on board ship was wonderfully well conducted, and an examination of the tables will show that the percentages of loss were, after all, but slight. When they were high it was as a rule due to inefficient Conducting Officers, and to their want of supervision of the horses on board ship.

The supply of remounts for the campaign made by the Remount Department up to the 31st of January 1902, amounted to 216,863 horses, and it is noticeable that the recent Committee of Enquiry have reported that for two Army Corps the probable requirements in horses would be 25,000, of which 9,600 were likely to be wanted to replace casualties for the first six months. It has also been shown that a reserve of 2,000 horses was recommended for peace time. If this reserve be ever sanctioned, it will be about the minimum which should be kept up at home; but even if there be no reserve, it is apparent that the provision of 25,000 horses or more must always take a great deal of work and organisation, and it is with reference to this possible future supply at home that I venture to add some additional remarks.

There seems little use in referring to the conflicting opinions in regard to the merits of the various classes of horses, but this much may be said, that it is plainly the duty of the Director to collate all the opinions he can, in regard to the merits and defects of the various classes, to form his own opinion on what he has thereby learnt, and then to make a supply as best he can without outside interference. In fact, complete trust in him is necessary, for there is no subject on which more varieties of opinion exist than the merits of horses of different kinds, where they should be obtained, and how much should be paid for them. It is one of my chief difficulties in India that outside irresponsible advisers of Government on this subject were many, and that changes were constantly being suggested in the method of obtaining horses for the various branches of the mounted service in that country. I do not think on the whole that the Indian system of supply, as regards imported horses, can be improved upon, and I am glad to find how highly that system has been spoken of by Lord Downe, in his recent report upon the purchasing operations in the Colonies. That system is one, in brief, of giving contracts to reliable dealers who have proved themselves worthy of selection, and I think that, had this system been adopted from the commencement of the past war, the Remount Department might have saved itself a great deal of trouble, not only in Australia, but from other foreign sources. The system of obtaining horses *c.i.f.*, that is, cost, insurance, freight inclusive, to be landed at the port required, and there taken over if found fit, is a good one. This is apparent by the reports on the system of obtaining horses in this manner from Australian dealers like Messrs. Kreuze and Madden, Glascock, and others. Horses might have been obtained in this manner from almost every source, provided the organisation was good and that a certain amount of advances had been paid on each shipment previous to embarkation. This system of advances is well known in India, but there the advances are only paid as the ship arrives in the port of disembarkation. From Persia, and other sources, however, advances are sometimes made previous to the horses' arrival, and I see no reason why this system should not be adopted, with the reliable contractors in future in England. If any one point is prominently brought out in the recent

reports of remount operations, it is that of the futility of attempting to deal with owners, or small dealers, direct, almost anywhere; and of the advantage of employing the great contractors who have the whole business in their hands. There is no doubt that had the largest contractors in England and Ireland been thus employed to a greater extent, under the advance system, many more horses could have been obtained, and probably of a better class, and more suited for immediate work. This was the system, for example, adopted in Hungary, where, it was found, practically the whole supply was in the hands of one individual, without dealing with whom, purchasing became almost futile. There were of course many other sources of supply left untapped; for example, Chicago is one where eight million horses are supposed to be available for purchase of a very good quality. To have attempted to obtain horses from thence without dealing with the large contractors would have been useless. It may be said, however, that there is clearly insufficient information recorded concerning the various sources of supply in the Department which is to be responsible for that supply in times of emergency, and it will well repay the State to take in hand the preparation of such manuals as I have already alluded to, containing the information in regard to the number of horses available, the names of the principal contractors, the time within which horses can be obtained, and the probable price. This information should of course be almost annually revised, and the very clearest rules should be prepared beforehand in regard to the method under which horses should be obtained. These methods should be drawn out and printed, so that all concerned might know the system under which horses would be purchased by the British Government, in the event of any emergency. One system should be adopted throughout, and I have always found that it saved very great trouble to be able to hand to numerous enquirers a printed statement showing the conditions under which horses would be purchased, not only from the foreign, but from the home (Indian) sources of supply. In considering this matter it will be well to bear in mind that it is advisable not to place any orders for horses in the hands of one large contractor when there are others who are reliable in the same locality. Thus, if an advance of some thousands of pounds has to be given to one individual for a single shipment under the system referred to, it would be well to extend a similar order to other contractors who may be recommended as trustworthy and reliable, by those who are best able to judge of their capabilities of supply. In foreign sources, Consuls or diplomatic authorities are invariably best able to advise on such matters, and if their advice be sought, much needless travelling and expense will be saved by sending officers about to make enquiries on subjects which are already fully recorded in existing departments.

It is observable that the reports on the South African purchases show that 126,372 horses and 30,699 mules were there purchased. I do not know from whom these were obtained, but I venture to give my own experience of arranging for the purchase of such animals from South Africa, which resulted in the officers sent having to resort to a large contractor out there, who virtually obtained for them what was required, and who, when he found the conditions under which horses were bought, arranged subsequently to import them himself, as a private speculation, at his own risk, to India.

If the clearest description of the horses required, and the price to be paid, be supplied to contractors such as I have referred to, and if they be made advances, they have only themselves to blame if any large percentage of their horses be rejected on arrival at the port of disembarkation; but such was the want of horses in South Africa that, had the contractors been encouraged to import in this way, the horses must have been very bad indeed if the rejections could not have been sold somewhere. In this connection it must be observed that it is necessary, in adopting the *c.i.f.* and advance system recommended, to give liberal prices for the horses required. So far from too much having been paid for the horses during the past war, in my opinion I consider that, generally speaking, it would have, in the end, proved more satisfactory to have given more liberal prices. I observe that the horses imported from Australia, for example, were purchased at from £31 to £33 each, landed at the port of disembarkation. I was asked to give an opinion of some of these whilst at Durban, and enquired first as to what they had cost. The reply given was that the price was not known, which struck me as curious, and I said that it would be impossible to venture an opinion upon them until I knew what had been paid for them. It will be observed in some of the reports

of the horses in South Africa, that, to commence with, Lord Roberts was of opinion that Australians were required, and would do well. He doubtless had in mind the excellent horses supplied under the Indian system at £50 per head, and that they should be acclimatised. It is shown in the reports alluded to that the Colonial horses which came from India did excellently. This was no doubt due to their having been acclimatised for a year or more in India, and to their high price. On the other hand it is observable that the ordinary Australian, imported direct from the Colonies for service, did badly. It is without doubt a fact that an Australian horse, or indeed a horse from any foreign source of supply, coming to a country like South Africa, where the climate is reversed, will do badly without rest. A month's rest is not sufficient, and this has been proved, but the majority of remounts supplied during the war went direct from grass on board ship, and from thence on trek into the field.

In support of this opinion it may be observed that the Argentine horses were almost universally badly reported upon. The exception was that of the 10th Hussars, which corps reported on them favourably, but the reason for this was evidently that the horses they received were given a period of acclimatisation in South Africa before they were issued.

The total expenditure of the Remount Department during the past war is understood to have been about £13,000,000, and doubtless some of this money might have been saved in transport charges. Under the contract system advocated rates can often be arranged more cheaply by the shippers themselves than by any Government agency. This fact is recorded in one of the official reports on the purchases made in Australia, which shows that shippers can often obtain freights at half the Government rates. It is noticeable also that in one of the reports alluded to, a statement has been made that 50 per cent. of the horses imported were unfit for mounted work in South Africa, or any country, and that those which were imported to Durban would be unfit for work for nine months. This shows the necessity for

a proper system of rest being given to the horses that have been landed, and the necessity for care being exercised in regard to the individuals from whom remounts are purchased. The supply in Australia and elsewhere is vast, but the large contractors who are accustomed to supply are often far more fitted to obtain suitable remounts than the inexperienced officers who have had comparatively little opportunity of purchasing in the localities where they have been sent.

The Indian Remount Manuals contain clear instructions in regard to every article of equipment required for a base or advance remount dépôt, and the method under which the horses ought to be issued. It is observable in recent reports that most of the horses in South Africa were sent to the front without any rolls showing whence they had been received, date of landing, or when they should be issued. Very clear instructions on this subject, if drawn up, cannot fail to be of use to officers who may have had little experience of dépôt management. The remount dépôts in South Africa, most of which I saw, were nearly all conducted on the Indian system in almost every detail. A great many men from India were obtained for their management, such as cavalry native officers, non-commissioned officers, syces, farriers, &c. These proved most useful, and it is very noticeable how well the veterinary dépôts were also managed, under a similar system. No better arrangements could be made in future than to draw up tables showing how far India can be called upon to assist in native establishments for both remount and veterinary dépôts. All such arrangements as these should manifestly be drawn up in time of peace, so that on the occurrence of war the Director may know exactly what is to be done, and from whence his remounts and establishments are to be obtained. Leaving such details to the last, on the occurrence of war, is most strongly to be deprecated. On almost every subject here referred to it is possible to have printed instructions ready, which should require comparatively few modifications, as, provided the principles laid down be correct, the details can subsequently be altered.

APPENDIX F.

PRECIS OF THE EVIDENCE BY GENERAL SIR F. W. E. F. FORESTIER-WALKER, G.C.M.G., K.C.B.

(See Questions 13,636-13,838.)

1. I arrived at Cape Town and assumed command of the troops in South Africa on September 6th, 1899.

At that time the combatant forces in Natal consisted of two regiments of cavalry, three batteries Royal Field Artillery, one mountain battery, and four battalions with four companies mounted infantry; being one battalion and one mounted infantry company in excess of the peace garrison which had existed since May, 1897.

In Cape Colony the combatant forces consisted of two and a half battalions, three mounted infantry companies, and two companies Royal Garrison Artillery; being one battalion and one mounted infantry company less than the peace garrison. The difference from the peace strength in the two colonies was accounted for by the transfer from the Cape to Natal of the 1st Liverpool Regiment. Two battalions were at the time on the water to reinforce the South African Garrison, one each for the Cape and Natal. That for the Cape, I was informed, was not to provide a mounted infantry company, so that on its arrival the garrison would still be deficient of its peace strength by that unit.

Two companies of Engineers above the normal strength were in Cape Colony, and one in Natal. At Kimberley there were three officers, but no troops. Two corps of mounted infantry had been raised in Mashonaland and Bechuanaland—strength, 450 each. The horses for these had been purchased, but the authorised number of recruits was not complete.

All the troops in South Africa had been provided with complete regimental transport, but there were no field auxiliary services such as bearer companies, field hospitals, or ammunition columns.

For some time past the authorities at home had been urged to purchase horses and mules in the Transvaal and Orange Free State, large numbers of which were available; but, probably owing to the fear of rendering the political situation more acute, leave could not be obtained to buy more animals than were needed for the forces then in the country.

As to the actual state of affairs and the imminence of war practically nothing was known beyond the reports which appeared in the daily papers, nor was it known, should hostilities break out, what part the Staff and Garrison of Cape Colony would take, nor where the expeditionary force would land. Intelligence officers, however, had reported on various sites which had been selected as bases and advanced depôts, and, provided that the troops, a scheme of operations and a staff of officers were forthcoming, it would not have been difficult to arrange for the needs of an expeditionary force.

I had been informed of the constitution of the force which it was proposed to send from India to Natal, and shortly after my arrival I received the intelligence that four battalions from the Mediterranean were about to be despatched to South Africa—two for Natal and two for the Cape. I gathered from the general indications given that, in case of war, the troops would advance through Natal to the Transvaal.

2. The existing scheme of defence in Natal had been worked out under the General Officer Commanding in Natal (Sir W. Symons) and his predecessor on the spot. It was at best merely a plan for utilising to the best advantage the small force in the Colony of Natal. That force might have operated against a raid from the Transvaal or Orange River Colony, but against an invasion by the forces of one or both Republics it was out of the question to expect it to act in the field. As soon as the Indian contingent was sent to Natal the conditions were changed. The command of the forces in that Colony was then separated from the Cape command, and was given to General Sir G. White.

The troops in Cape Colony all, with the exception of one battalion and one mounted infantry company, belonged to the coaling station, and could only be removed from the coast at the risk of leaving Simons Bay

and Table Bay undefended. A scheme had been drawn up for sending detachments to occupy the bridge over the Vaal at Fourteen Streams, the Modder River bridge, and the bridges over the Orange River at Orange River station—Norvals Pont and Bethulie. To carry out such a scheme with the normal Cape garrison would only have been to invite disaster. Moreover, the High Commissioner was anxious to avoid placing any posts so near to the Orange Free State frontier, so long as the attitude of that State was in doubt, as to lead the burghers to suppose it was intended to invade their territory. It had, therefore, been determined, as soon as a crisis arose, to do everything possible to keep open the Western line, more especially as it was beyond doubt that Mafeking would be isolated as soon as war broke out, and would have to be relieved. It was therefore arranged to send to Kimberley half a battalion, six mountain guns, and a detachment of Royal Engineers. If possible, Fourteen Streams and Modder River bridges were to be occupied. Half a battalion, one company of mounted infantry, two guns, and a detachment of Royal Engineers, were to occupy Orange River Bridge, and half a battalion with Royal Engineers, De Aar. The railway junctions in the centre and east of the Colony at Naauwpoort and Stormberg were to be occupied each by half a battalion, two guns, one mounted infantry company, and a detachment Royal Engineers. If it was decided to advance through the Orange Free State, De Aar, Naauwpoort, and Stormberg would become advanced depôts, and would act as defended points for covering the concentration of the invading force in rear.

These arrangements would dispose of the entire available force in Cape Colony, except half a battalion. As reinforcements arrived it was proposed to strengthen De Aar and to concentrate at Orange River a movable force with the object of moving towards Kimberley, or of invading the Free State from its western frontier, and operating against the rear of any commandoes which might have crossed the Orange River.

It was not possible at this stage to place any reliance on the Volunteer forces of Cape Colony, as the Cape Ministry were strongly opposed to allowing them to be used in a war with the Transvaal.

With the forces at my disposal in Cape Colony, weak as they were, and provided with obsolete guns, it was impossible to expect more than that they should hold on to certain definite points till the arrival of reinforcements from England. The attitude actually taken up was only justified by the belief that the Boers would not take the initiative by invading Cape Colony.

3. On the 18th and 19th September the troops detailed for the defence of Kimberley and Orange River Bridge were despatched from Cape Town, and on the 25th September the De Aar detachment left.

Colonel Baden-Powell's force had in the meantime been placed under my orders, and every effort was made to comply with the demands he made. He asked for modern guns. The stores at Cape Town did not then contain a single modern weapon for such a purpose. Application was made to the Admiral at Simons Town, who supplied a list of spare guns in store; none of these were of any use for the object required, and eventually two obsolete 7-pounder R.M.L. guns were discovered by the Ordnance Department and despatched northwards.

The defences of Kimberley were thrown up in accordance with the scheme prepared by Colonel J. K. Trotter, A.A.G. Orange River and De Aar were also put into a state of defence. As soon as the officers in command reported those places to be secure, supplies and stores were poured into them as fast as possible. Kimberley had already been provided with supplies for two months for its garrison.

Meantime animals were being purchased in every part of the colony, and a certain number was obtained from

the Republics. But towards the end of September it was too late to make use of the sources of supply beyond our border, and arrangements had to be made to import animals from America, Australia, and Argentina.

Authority was sought from the Secretary of State to raise corps of scouts in the Cape and Natal, but sanction was not obtained till by means of the High Commissioner's representation on October 2nd I was informed that the enrolling of 2,000 men would be approved.

The first information I received that it was intended to land the Army Corps in Cape Colony and that I, with my staff, was to have command of the Lines of Communication, was from a telegram sent me by General Buller, September 29th. The managers of the Cape Government Railway were at once summoned to a consultation, and it was arranged so to distribute the rolling stock that a division might be landed at each port, Cape Town, Port Elizabeth, and East London, the corps, troops and cavalry coming to Cape Town. Officers were sent to Port Elizabeth and East London to arrange for stores, rest camps, etc., and supplies were poured into those places. The railway lines were organised and an officer placed in charge of each line between the base and advanced depôt. As special service officers became available the many appointments necessary for the supervision of the lines of communication were organised and filled. Naauwpoort and Stormberg had been garrisoned on October 1st and were put into a state of defence.

The arrangements I proposed were cabled to General Buller on his arrival at Madeira and were approved by him.

To facilitate the collection at and despatch of troops from the base at Cape Town large areas were hired for infantry and mounted troops, sidings were constructed and huts erected. Ground was obtained for extending the Ordnance Depôts, and an arm of the dockyard was taken up entirely for berthing transports and

for storing their cargoes. Similar arrangements on a smaller scale were made at Port Elizabeth and East London.

A base hospital was established at Wynberg. The accommodation at the Remount Farm at Stellenbosch was greatly increased and sidings for loading up mules, horses, and wagons, were constructed. It was arranged that all units requiring regimental transport should proceed to Stellenbosch and take over the transport there. On the eastern line a Remount and Ordnance depôt was formed at Queenstown, and on the Central line a similar depôt was established near Port Elizabeth.

Armoured trains were constructed for Cape Town, Kimberley, and Mafeking, and ambulance trains were prepared at Cape Town.

4. I have nothing to add to the evidence on Supply and Transport already given to the Royal Commission. The requirements were in general notified from England and they were complied with in full.

5. The exigencies of the political situation, no doubt, stand in the way of military preparations at the stage preceding the outbreak of war. But it is impossible to exaggerate the advantage to be gained by the judicious expenditure of a sum of money before the actual commencement of operations, when it is poured out like water. In the early stages of the crisis the time of an undermanned staff was taken up, and the telegraph wires were occupied with matters mostly connected with expenditure of a very trivial nature. If the reference of such matters to higher authority could be avoided, time would be saved, and the General Officer Commanding in command on the spot, who is best able to appreciate the requirements of the moment, would be able on his own responsibility to take such steps as were necessary.

FREDERICK FORESTIER-WALKER,

29th January, 1903.

General.

Appendix G.

APPENDIX G.

Copies of the Reports made to the Secretary of State for War by General Sir FORESTIER-WALKER, G.C.M.G. K.C.B., Commanding Troops South Africa, prior to the arrival in South Africa of General the Right Hon. Sir Redvers Buller, G.C.B., G.C.M.G.

(See Question 13743).

C.R. No. A—3065—9.

Cape Town,
September 12th, 1899.

SIR,—With reference to recent correspondence by cablegram on the increase of troops in South Africa, I have the honour to make the following report.

2. I have been shown by his Excellency the Governor a copy of a cable communication from the Secretary of State for the Colonies, recommending that, on the arrival of the 1st Manchester Regiment, Laing's Nek should be occupied by the troops now at Ladysmith. On receipt of this copy I at once telegraphed to the General Officer Commanding Natal to ask if he considered the operation safe, impressing upon him at the same time the importance of avoiding a reverse, however trifling, at the outset of hostilities. I received on the 11th, a reply to the effect that, with the more than doubtful attitude of the Orange Free State he did not think it advisable to occupy the Nek, at any rate until the Indian Contingent was within a week of reinforcing Ladysmith. I entirely concur in this recommendation, and I beg to point out that the force occupying the Nek would almost certainly be cut off from Ladysmith, and that to re-establish connection with it, serious fighting would probably be necessary over the difficult ground between those places, where we should find the Boers at their best.

3. I may add that the difficulty in dealing with this, as well as with the question of the preliminary arrangements of organisation and preparation for the forces to be sent out, is great owing to my ignorance of the line to be adopted in case of an advance into the Transvaal. No doubt at the present stage it is impossible to say definitely what measures will be taken, but I desire to impress upon you the urgent necessity of giving me early information concerning points of disembarkation, lines of advance, and advanced depots, in order that the necessary administrative arrangements may be taken for the reception and forwarding of the troops and for the collection of transport and supplies. I also desire to point out that, in order to deal with these matters, a large increase is needed of Army Service Corps officers, both for transport and supply, Ordnance Corps officers, Pay Department officers, and Remount officers (to pass animals purchased under contract), together with a suitable proportion of non-commissioned officers and men of all these departments.

4. As regards this Colony, I am already taking steps to form a rest camp at the remount farm near Stellenbosch, 32 miles from Cape Town, where there is ample room for encamping troops, and where the Royal Engineers are now engaged in making a railway siding. This arrangement involves only a small expenditure, and considerable saving will result from using land for camping purposes for which no payment will be required.

5. Regarding the action of the troops in Cape Colony, I am awaiting a report from Lieut.-Colonel Kekewich,

commanding 1st Loyal North Lancashire Regiment, who has been sent to Kimberley, to consider what measures are necessary to supplement those taken by the Colonial Government. I consider it of great importance to secure the railway line as far as, and including Fourteen Streams Bridge, and with this object I consider that it will be necessary to occupy the positions referred to in my predecessor's letter of June 14th last. I enclose on a separate sheet the exact composition and destination of each detachment. From the information I have been able to gather from the border districts, it is very desirable that these positions should be occupied as soon as political considerations allow, in order to prevent the passage of disloyal Boers from the Colony to the Orange Free State, and of arms and ammunition from the Free State into the Colony. After the detachments, as detailed, have secured the points to which they are sent, it may be necessary to push them right up to the frontier along the Orange River, should such a course appear safe.

6. I desire particularly to draw attention to the composition of these detachments, and to point out that, though provided with regimental transport, they cannot be regarded as a mobile or manœuvring force. The only mounted troops in a country peculiarly suited for Cavalry are three Mounted Infantry companies, of which one only can be regarded as well trained. The artillery is improvised from 2·5-in. and obsolete 9-pounder R.M.L. guns belonging to the Cape defences; it has a limited supply of ammunition, and is not horsed, so cannot manœuvre. I particularly recommend this point to your attention, and I consider it most important that the force in this Colony should be well armed and specially mobile. If the advance into the Transvaal should be made by Natal, the Orange Free State remaining nominally neutral, it will, I conceive, be necessary to supplement the very limited supply power of the Natal Railway, by using the line to Fourteen Streams, and this line, which is already essential for maintenance of communication with Kimberley and Mafeking, would become of greatly-increased importance as a line of supply to the forces in the Transvaal, as well as a means of containing a certain portion of the Boer forces by threatening their South-West frontier.

7. Therefore it is very important, I consider, that the troops sent to the frontier stations, which under present circumstances, can only be regarded as local garrisons, should as soon as possible be reinforced, and should be formed into mobile units provided with mounted troops and efficient field artillery.

I have, etc.,
(Signed) FRED FORESTIER-WALKER,
Lieut.-General,
Commanding Troops, South Africa.

The Under-Secretary of State,
War Office, London, S.W.

12--9--99.

PROPOSED DISTRIBUTION FOR BORDER DEFENCE OF EXISTING GARRISON IN CAPE COLONY.

Station.	Commanding Officer.	Royal Artillery.	Royal Engineers.	Infantry.	Mounted Infantry.	Machine Guns.	Army Service Corps.	Royal Army Medical Corps.
Stormberg	Lieutenant-Colonel Evans - Gordon, 2nd Royal Berkshire.	1 officer, 24 men, 2 guns, 9-pr.	1 section, 29th company; 1 officer, 25 men.	Headquarters and 4 companies, 2nd Royal Berkshire.	2nd Royal Berkshire.	2 from King William's Town.	Captain Colquhoun, 1 lance - corporal, 1 baker, 1 butcher.	Major Saw and King William's Town Hospital staff.
Naauwpoort	Major McCracken, 2nd Royal Berkshire.	1 officer, 24 men, 2 guns, 9-pr.	Headquarters, and 1 section, 29th company; 1 officer, 39 men.	4 companies, 2nd Royal Berkshire.	2nd King's Own Yorkshire Light Infantry.	2 from Graham's Town.	1 warrant officer, 1 baker, 1 butcher (affiliated to Stormberg).	Major Greenway and Graham's Town Hospital staff.
De Aar	-	-	2 sections, 7th company; 1 section, 29th company.	-	-	-	(Affiliated to Kimberley <i>pro tem</i> .)	-
Orange Bridge.	Lieutenant-Colonel Kincaid, Royal Engineers.	1 officer, 40 men, 2 guns, 9-pr.	Headquarters and 1 section, 7th company.	4 companies, 1st North Lancashire.	1st North Lancashire.	2 from Cape Town, manned by Royal Artillery.	(Affiliated to Kimberley <i>pro tem</i> .)	Captain Shanahan, 1 sergeant, 2 men.
* Modder Bridge.	-	-	Detachment from Fourteen Streams.	-	-	-	-	-
Kimberley	Lieutenant-Colonel Kekewich, 1st North Lancashire.	3 officers, 50 men, 4 guns, 2.5 in.	Detachment from Fourteen Streams.	Headquarters and 2 companies, 1st North Lancashire.	-	1 1st North Lancashire.	Captain Gorle, 1 warrant officer, 3 non-commissioned officers and men.	1 sergeant, 1 man.
Fourteen Streams	Major Murray, 1st North Lancashire.	1 officer, 40 men, 2 guns, 2.5 in.	1 section, 7th company.	2 companies, 1st North Lancashire.	-	2 from Cape Town, manned by Royal Artillery.	(Affiliated to Kimberley <i>pro tem</i> .)	Lieut. O'Gorman, ambulance, 1 sergeant, 2 men.
		Total:—6 guns, 9-pr.; 6 guns, 2.5 in.; 7 officers, 178 men.						Total:—4 on Royal Artillery charge; 5 on Infantry charge.

* To be watched by detachment from Kimberley; Officer Commanding Kimberley will arrange for Defence.

Appendix G

September 19th, 1899.

12 Officers,
537 N.C.O.'s
and Men.

18 Officers,
582 N.C.O.'s
and Men,
144 horses.

In confirmation of my cipher cablegram of yesterday, I have the honour to report that a detachment of four companies North Lancashire Regiment, detachment R.A. with six 2.5in. R.M.L. guns, section R.E., and detachments A.S.C. and R.A.M.C. left for Kimberley last night.

To-night a force of four companies North Lancashire Regiment, one Mounted Infantry company, two guns R.A., section R.E., and details leave for Orange River Bridge under the command of Lieut.-Col. Kincaid, R.E.

2. These troops are being dispatched at the request of H.E. the High Commissioner, who informs me that the Colonial Government will be responsible at present for the safety of the communications between Kimberley and

Mafeking. The force of police, however, which is at their disposal is small, and they cannot be expected to resist a serious raid.

3. I propose within the next few days to move to the positions already fixed at the railway junctions the remainder of the troops of the Cape District, leaving in Cape Town four companies of the 1st Royal Munster Regiment, and about 150 of the Royal Garrison Artillery.

4. I am informed by the Admiral, Commander-in-Chief (in conversation), that, in case of emergency, he is prepared to land a force of 600 bluejackets with a proportion of field guns.

5. I enclose a revised form of distribution of the troops on the frontier.

C.R. A.—2994—10.

PROPOSED Distribution for Border Defence of existing Garrison of Cape Colony, 20th September 1899.

STATION.	Commanding Officer.	Royal Artillery.	Royal Engineers.	Infantry.	Mounted Infantry.	Machine Guns .303-in.	Army Service Corps.	Royal Army Medical Corps.
Stornberg	Lieut.-Colonel Evans-Gordon, 2nd Royal Berkshire.	One officer, 24 men, two guns, 9-pr.*	One officer, 25 men, one section 29th Company.	Head Quarters and four companies 2nd Royal Berkshire.	2nd Royal Berkshire.	Two from King William's Town.*	Captain Colquhoun, one lance corporal, one baker, one butcher.	Major Saw and King William's Town Hospital Staff, one sergeant, three men.
Naauwpoort	Major McCracken, 2nd Royal Berkshire.	One officer, 24 men, two guns, 9-pr.*	Head Quarters 29th Company, one section 29th company, one officer, 39 men.	Four companies 2nd Royal Berkshire.	2nd King's Own Yorkshire Light Infantry.	Two from Grahams-town.*	One warrant officer, one baker, one butcher; affiliated to Stormberg.	Major Greenaway and Grahamstown Hospital Staff, one sergeant, two men.
De Aar	—	—	One section 7th Company, one section 29th Company.	Four companies 2nd King's Own Yorkshire Light Infantry; four companies 1st Royal Munster Fusiliers.	—	—	Affiliated to Kimberley <i>pro tem.</i>	+
Orange River Bridge	Lieut.-Colonel Kincaid, Royal Engineers.	One officer, 40 men, two guns, 9-pr.*	Head Quarters and one section 7th Company.	Four companies 1st Loyal North Lancashire.	1st Loyal North Lancashire.	Two from Cape Town.*	Affiliated to Kimberley <i>pro tem.</i>	Captain Shanahan, one sergeant, three men, one ambulance.
Modder River Bridge	Lieut.-Colonel Kekewich, 1st Loyal North Lancashire.	Four officers, 90 men, six guns, 2.5-in.	One section 7th Company.	Head Quarters and four companies 1st Loyal North Lancashire.	—	One 1st Loyal North Lancashire,* two from Cape Town.	Captain Gorle, one warrant officer, five non-commissioned officers and men, one butcher, one baker.	Lieutenant O'Gorman, seven sergeants, two men, one ambulance.
Fourteen Streams	(Protected by Cape Police.)							
		Total.						
		Six guns, 9-pr.						
		Six guns, 2.5-in.						

* Eight manned by Royal Artillery, one manned by 1st Loyal North Lancashire.

† Exact details will be decided on establishment of Ordnance Depot, which will be located here.

Appendix G.

September 26th, 1899.

In continuation of my letter of 20th instant, No. A.—2994—10, I have the honour to inform you that four companies of the 2nd Battalion Yorkshire Light Infantry and two sections R.E., the whole under Major Hunt, 2nd Yorkshire Light Infantry, left this place for De Aar Junction last night. As soon as the 1st Royal Munster Fusiliers are provided with transport, I propose to despatch four companies to the same place, where ordnance and supply depôts will be established.

2. When the Mounted Infantry company of the 1st Royal Munster Fusiliers is formed, I propose to send it to Orange River, and to transfer the Mounted Infantry Company of the 1st North Lancashire Regiment from there to Kimberley. The Officer Commanding at this latter station is making urgent appeals to me for some mounted men, the police having been withdrawn for the protection of the frontier northwards, and as a temporary measure I am sending to him one officer and twenty men from Orange River, but no more can be spared till another company is formed.

3. As soon as the four companies of the 1st Royal Munster Fusiliers become available to move to De Aar, I anticipate that it will be necessary to reinforce Orange River bridge with the half battalion of the 2nd Yorkshire Light Infantry from De Aar, as it is of the first importance that this crossing should be protected.

4. The movement of the Royal Berkshire Regiment to Naauwpoort and Stormberg has been postponed in deference to the wishes of H.E. the High Commissioner, and I await his sanction to complete the frontier dispositions.

5. I have reported by cable the advance of the 18th Hussars, two batteries, the 1st Leicester Regiment and the 2nd Dublin Fusiliers from Ladysmith to Glencoe Junction for the protection of the Dundee coalfields and the transfer of the 5th Lancers and 1st King's Royal Rifles from Maritzburg to Ladysmith. No. 10 Mountain Battery, having concluded its practice, also remains near Ladysmith.

6. Arrangements have been made for establishing a rest camp at the remount farm, Stellenbosch, and the companies of the 1st Royal Munster Fusiliers which I

propose to send to the front proceed there this week to be mobilised, and to receive their transport and Mounted Infantry ponies. As soon as this move takes place, the entire camp at Wynberg will be evacuated, and will become available as a base hospital, after the necessary alterations have been made.

7. The preparation of an animal account, so far as the Central Remount Office is concerned, has been completed, and the horses and mules have all been brought on charge and accounted for to date.

8. One thousand mules are now in course of shipment from Cape Colony to Natal.

9. The issue of condemned great coats to drivers and leaders as well as of cheap boots, puggarees, and numbered arm badges has been sanctioned.

10. So far as the Lines of Communication are concerned, the general system of organisation for "B" Staff Officers and A.S.C. has been drawn up and will shortly be issued to all concerned.

11. The formation of stations at Kimberley and Orange River Station, as well as of an advanced depôt at De Aar has been begun, and orders have been given to complete the reserve of rations and forage to three months (two months Woolwich supplies and one month local), and at all places contracts for the supply of fresh provisions are being concluded.

12. Arrangements are being made for base stores for units going to the front, and for the accommodation of the details to be left behind.

13. Negotiations are being carried on for the exclusive use of storage for supplies and stores landed ex-transport at Cape Town.

14. Arrangements are being made to complete Colonel Baden-Powell's force to four months reserve of rations in consequence of the difficulties of communication during the wet season.

15. The exact state of the animals purchased and of casualties is shown on a return enclosed in a separate letter.

October 4th, 1899.

I have the honour to report, in continuation of my letter of the 26th ultimo, that on the 30th ultimo the detachments detailed in the table accompanying my report of the 19th ultimo for the occupation of Naauwpoort and Stormberg Junctions left Grahamstown, King Williamstown, and Cape Town, and I have since heard of their arrival at those stations.

2. Yesterday six companies of the 1st Royal Munster Fusiliers left for Stellenbosch, where two companies will remain to perform the duties of the rest camp, and four companies and one company M.I., as soon as formed, will proceed to De Aar, where some progress is being made with the formation of a depot.

3. At Kimberley the formation of a town guard has been sanctioned, and already 900 men have been enrolled. His Excellency the High Commissioner has sanctioned the purchase of 200 horses to form two companies of Mounted Infantry from the Volunteers, and the formation of these companies is being proceeded with. The redoubts designed in the defence scheme have been nearly completed, and the Volunteers have been embodied. The Premier Mine has been garrisoned and provisioned for independent defence.

4. To meet the urgent demands of Mafeking two 7-pounder guns belonging to the Cape Police have been sent from Kimberley to Mafeking, where there are already two similar guns. Lieutenant-Colonel Hore's force remains quartered in Mafeking, and so long as the place continues to be threatened by the Boers collected at Lichtenburg, it will be impossible for it to leave the large collection of supplies stored there, without adequate protection.

5. Two armoured trains are now on the line about Mafeking—one is being sent from here to Kimberley to-day, and two more are being prepared for use between Orange River Station, De Aar, Naauwpoort, and Stormberg. As the arming and manning of these trains will considerably weaken the garrison of the places, they will only be used in cases of emergency.

6. The engine drivers and railway employees of the Orange Free State, who are mostly British, have announced their intention of retiring into British territory as soon as the regular working of the railways ceases, and I have undertaken to employ these men in our service. I propose to attach them to the 8th Company R.E., and to utilise them on railway work. I have already obtained some of the Free State Railway Staff, who have come out of the country, and I expect that large numbers of them are now leaving their employment.

7. General Sir G. White and staff arrived yesterday morning, and proceeded by mail train in the evening to East London, whence the R.M.S. "Scot" will convey them to Durban. The following special service officers were disembarked here:—

Lieutenant-Colonel Ewart.

Major Haking.

Major Fairholme.

also

Colonel Richardson, C.B.

Lieutenant-Colonel Landon, A.S.C.

Lieutenant Horsboro, A.S.C.

Quartermaster Woods, A.S.C.

1 Warrant Officer, A.S.C.

1 Staff Sergeant, A.S.C.

I propose to utilise the special service officers for the organisation of the ports of disembarkation at Port Elizabeth and East London, and the lines of communication to De Aar, Naauwpoort, and Stormberg from Cape Town, Port Elizabeth, and East London.

8. In answer to urgent telegrams from Colonel Baden-Powell, his reserve of supplies has been increased to four months' rations for men.

9. A large store has been obtained in the South Jetty

of the Cape Town Docks, and a berth has been reserved for transports in close proximity to it.

10. At the remount dépôt at Stellenbosch there are now 177 horses and 772 mules. 1,000 mules have been despatched to Natal.

819 horses and 1,200 mules are still due on contract.

11. Terms of contract have been drawn up for the hire of ox wagons. The most substantial firm, Julius Weil and Co., do not care to guarantee more than 500 or 600 wagons complete.

October 11th, 1899.

With reference to my letter of the 4th instant, I have the honour to report as follows :-

2. On the 4th instant the s.s. "Gaul" arrived at this port, and in accordance with your telegraphic instructions received the same day, I disembarked from her the 1st Battalion Northumberland Fusiliers, and despatched the battalion to the rest camp at Stellenbosch, to be supplied there with transport and mobilisation equipment on South African scale.

3. The following were also disembarked at Cape Town :

No. 9 Company, Army Service Corps,

No. 15 Company, Army Service Corps,

and the following officers : Captain E. T. Ward, Captain Pigott, D.S.O., Lieutenants Duffus, Grose, and Lord, Lieutenants and Quartermasters Law, English, and MacFarlane, and Major Birch, R.A.M. Corps.

4. The Special Service Officers disembarked ex "Tallion Castle" have been disposed of as follows :—Lieut.-Colonel Ewart as Commandant at East London, Major Fairholme as Commandant at Port Elizabeth, Major Haking as Commandant of the advanced dépôt at De Aar.

These officers have all proceeded to their stations.

As I am so weak in Army Service Corps officers and men, I am not able to send staffs to Port Elizabeth and East London to perform B. duties.

5. On the night of the 9th instant the mobilised wing of the 1st Battalion Munster Regiment, left Stellenbosch for Orange River Station, and last night the Mounted Infantry company of this battalion followed.

6. On account of the report received yesterday morning from His Excellency the Governor that a rupture with the S.A. Republic may be expected to-day, immediate instructions were issued yesterday for the 1st Battalion Northumberland Fusiliers to be entrained at Stellenbosch, and to proceed to De Aar. Accordingly, the

battalion was despatched last night. The transport will be entrained at Stellenbosch within the next day or two, and will follow the battalion, which will complete its mobilisation at De Aar. The Mounted Infantry Company will be entrained to-night.

7. I am pushing up stores and supplies to De Aar as fast as possible, and a daily train is being arranged for this service. I am not yet in a position to open dépôts at Naauwpoort or Stormberg owing to the risk of attack, but arrangements for the provision of sidings and erection of sheds are being proceeded with, and as soon as I am satisfied of the security of those places, I shall commence to stock them.

8. A position is being sought south of Stormberg for a remount dépôt. At De Aar a remount dépôt has already been opened.

9. Five armoured trains are being prepared, of which two are now working at Mafeking and one at Kimberley. A fourth will be despatched to-morrow to Stormberg, and the last will be sent to De Aar in about a week.

10. I returned yesterday evening from inspecting the posts at De Aar, Naauwpoort, and Stormberg. The position of De Aar renders it little liable to attack, and with an increased garrison it should be safe to equip it as a dépôt as rapidly as possible. Naauwpoort is a good natural position, but its vicinity to Colesberg, and the surrounding disaffection do not justify any increase to the stores at present there, as such addition would only offer temptation.

Stormberg is a fairly good position, but there again the farmers round are most disloyal, and any irruption into the Colony from the Free State might have a disturbing effect locally, so that, until I am in a position to increase the garrison, I consider it would be unwise to risk more than the erection of store sheds.

11. I enclose a table giving the distribution of the troops in Cape Colony, the Bechuanaland Protectorate, and Rhodesia.

Appendix G.

DISTRIBUTION for Border Defence of existing Garrison of Cape Colony, 11th October 1899.

Station.	Commanding Officer.	Royal Artillery.	Royal Engineers.	Infantry.	Mounted Infantry.	Machine Guns, 303.	Army Service Corps.	Royal Army Medical Corps.

October 18th, 1899.

Sir,

I have the honour to report the following events which have occurred since the date of my letter of 11th instant.

2. On the 14th instant, the half battalion of the 2nd Bn. K.O. Yorkshire L.I. from Mauritius was disembarked from the "Powerful," the quarantine regulations having been relaxed by direction of His Excellency the Governor, and was despatched that evening to De Aar.
3. The same day a squadron of the 9th Lancers arrived in the "Nairung," and was despatched that night for Orange River Bridge.
4. Two 15-pr. B.L. Guns, lent by the Prince Alfred's Own Cape Artillery, were sent with this train to reinforce Orange River Bridge.
5. On the 15th a second squadron of the 9th Lancers arrived in the "Nowshera," and was despatched the same evening for Orange River Bridge.
6. On the 15th, at the request of Officer Commanding Orange River Bridge, the 1st Battalion Northumberland Fusiliers were entrained at De Aar, and proceeded to Orange River Station.
7. To-day the "Nevassa," with the third squadron of 9th Lancers arrived, and the mounted portion proceed this evening for Orange River Station. The half, dismounted on account of the loss of horses on the "Wardha," proceeded to Stellenbosch to be remounted.
8. On the 11th, according to the terms of the President of the South African Republic's ultimatum, a state of war was commenced at 5 p.m.
9. On the 12th the wire between Mafeking and Vryburg was cut, and the armoured train which was sent from Mafeking to meet at Vryburg a similar train escorting two 7-pounder R.M.L. guns for Mafeking, was run off the line and captured at Kraaipan. The crew of the train, the two 7-pounders, and probably one or two machine guns were taken by the Boers. The Officer in command, Lieutenant Nesbitt of the Protectorate Regiment, was wounded in the head.
10. On the 14th the wire between Modder River and Kimberley was cut at 11 p.m. The wires between Kimberley and Vryburg were also cut. The railway line between Modder River and Kimberley was broken. From subsequent communication with Kimberley it was ascertained that the armoured train from that place engaged the Boers at Spytfontein on the 15th without suffering any loss, though fired on by artillery, and it is believed that some Boers were hit.
11. On the 15th the Boers occupied Spytfontein, and fortified the neighbouring kopjes.
12. On the 16th, the Boers occupied Windsorton and burned the station and stores; Kimberley water supply was probably intercepted.
13. On the 17th, the Boers occupied Belmont Station at 1 p.m.
14. Communication continues to be maintained with Kimberley by means of runners and horsemen, and it is also hoped to establish a similar connection with Mafeking. Both places are believed to be secure, especially Kimberley, where no serious attack seems imminent. From accounts received through Pretoria it is gathered that the Boers have attacked Mafeking without success.
15. Commandoes are reported to be near Norvals Pont and Aliwal North. It is very important for future operations that our posts at Naauwpoort and Stormberg should be strong enough to resist any attack, and I have therefore asked for the assistance of a Naval contingent at the latter place.
16. The Officer Commanding Orange River Station yesterday destroyed Hope Town road bridge, at the request of the magistrate, as he said it was feared Boer Artillery would cross there. The inhabitants are said to approve of this step.
17. Planking is being laid down on the Orange River bridge, so as to make it passable by artillery and cavalry. When this is completed, and when the troops at that station are reinforced by the three batteries expected this week, I shall have a force of all arms there ready to assist Kimberley and to threaten the retreat of any force which may attempt to invade the Colony by Bethulie or Norvals Pont bridge.
18. Three months' supplies have been put into all the stations occupied, and at De Aar a large supply and store dépôt has been formed.
19. Instructions have been given to Officers Commanding Posts not to allow armoured trains to proceed far without support.
20. The arrangement for establishing disembarkation depôts at Port Elizabeth and East London are proceeding, and I have to-day in an interview with the Railway Department made the necessary arrangements for the simultaneous movement by rail of troops and stores from the three ports of disembarkation to the advanced depôts at De Aar, Naauwpoort, and Stormberg.
21. The distribution of troops is enclosed.

DISTRIBUTION for Border Defence of existing Garrison of Cape Colony, 18th October 1899.

October 26th, 1899.

I have the honour to report the following events which have occurred since the date of my letter of 18th instant.

1. During the past week the remainder of the 9th Lancers have been conveyed to Orange River, the last squadron being mounted partly on the horses saved from the "Wardha," and partly on ponies from Stellenbosch Remount Depot. I trust that remounts may soon arrive from Australia to replace the latter.

2. A force of 17 Officers and 328 marines and bluejackets, with two 12-pounder Q.F. guns, has been sent to Stormberg and has arrived there safely. This post may now be regarded as reasonably secure.

3. Two armoured trains are now working south of the Orange River, one between De Aar and Orange River Bridge and one in the vicinity of Stormberg.

4. The lines East London-Stormberg, and Port Elizabeth-Nauwpoort, are being reconnoitred with a view of the concentration of some of the Volunteers recently called out at the most vulnerable points.

5. The Volunteer Force now under arms consists of—

- (a) The Prince Alfred's Own Cape Artillery, one battery with six 15-pounder B.L. guns, of which two have been lent to Orange River Bridge.

The Cape Garrison Artillery.

The Duke of Edinburgh's Own Volunteer Rifles.

The Cape Highlanders.

The Cape Medical Staff.

This force is all concentrated at Cape Town, and is performing garrison duty there.

- (b) The Prince Alfred's Guard at Port Elizabeth.

- (c) The Kaffrarian Rifles at East London.

- (d) The 1st City Volunteers at Grahamstown.

- (e) The Queen's Town Rifle Volunteers at Queens-town.

- (f) The Frontier Mounted Rifles at Barkley, Cathcart, Molteno, and Indwe.

6. This force, except the part at Cape Town, will be used to guard exposed points on the lines of communication from Port Elizabeth and East London to their advanced depôts, till it can be relieved by regular troops.

7. No men in Government employ have been called out, unless the head of the department furnishes a certificate that he is able to dispense with their services.

8. The Border Regiment arrived in the "Sumatra" on the 22nd, and was dispatched at once to De Aar, where it was to relieve the 2nd Battalion King's Own (Yorkshire Light Infantry), which was ordered to proceed to Orange River Bridge. On arrival at De Aar, however, instructions were received directing that it should be placed at the disposal of the General Officer Commanding

Natal, and accordingly the Battalion will be entrained for East London to-night, where the "Sumatra" has been sent to meet it. Appendix G.

9. I had intended to concentrate both the 2nd Battalion King's Own (Yorkshire Light Infantry) and the Rifle Brigade at Orange River Station, but owing to the emergency in Natal this move has been cancelled.

10. On the 24th the "Gaika" arrived with the Ammunition Column. The section for Cape Colony was disembarked, and proceeded by rail to Stellenbosch the same day to pick up transport. The remainder of the column, in accordance with the wish of the General Officer Commanding Natal, proceeded direct for Durban this morning.

11. All officers for Natal arriving per R.M.S. "Mexican" transhipped here to the "Gaika."

12. The "Zayathla," with the 67th and half 75th batteries Royal Field Artillery arrived yesterday and proceeded the same evening for Orange River station.

13. I have continued to fill up De Aar Depot, but no great quantity of supplies has yet been sent to the other two places, and as I learn that the Orange Free State is under the impression that no advance by these lines is contemplated, I am loth to do anything to call attention to them.

14. The bridges at Bethulie and Norval's Pont remain untouched, and no movements of importance are reported on this side.

15. Mafeking was reported all well on the 21st, and Kimberley on the 25th.

16. The Boers have proclaimed a Republic in the Vryburg district, and in parts of Griqualand West.

17. Seizures have been made in several places of goods consigned to the South Africa Republic, Orange Free State, or to private individuals in those Republics, and I have been in communication with His Excellency the High Commissioner as to our right with reference to contraband of war.

The Attorney General of Cape Colony has given it as his opinion that goods consigned before a state of war was proclaimed, as well as goods consigned to private individuals, are liable to stoppage but not seizure.

A ruling on this point is necessary, and I may at the same time mention that the date of the proclamation of a state of war was some days after actual hostilities had been commenced by the South African Republic.

18. The number of Reservists called out is 212, of whom 185 have joined. Of those absent six at least are in Mafeking and Kimberley, the notices of four have been returned, and several are still expected from distant stations.

Five Cavalry Reservists, 11 R.A., and 74 Infantry men have been sent to join units at Orange River Station, 2 R.A., 10 R.E., and 19 Infantry to Stormberg, 16 R.E. and 21 Infantry to Nauwpoort, and 10 R.E. to De Aar.

A distribution of the troops is enclosed.

Appendix G.

DISTRIBUTION State, 26th October 1899.

November 2nd, 1899.

I have the honour to report as follows:—

1. In accordance with paragraph 5 of my last week's letter, the Border Regiment was despatched from De Aar to East London, and embarked there in the "Sumatra" on the 28th ultimo.

2. The two 6·3-in. howitzers on siege carriages, referred to in Secretary of State's cablegram of the 25th ultimo, were obtained on loan from the Colonial Government, and shipped at East London for Natal, together with 900 rounds of ammunition, on the 28th ultimo.

3. On the 24th ult. a telegram was received from Colonel Kekewich announcing that with a force of two companies 1st Battalion L.N. Lancashire Regiment, two 2·5-in. guns, and the Mounted Corps recently raised in Kimberley, he had advanced against a Boer commando at Windsorton, and had driven it from the position occupied with considerable loss, the Commandant, Botha, being killed. The Garrison of Kimberley is reported to be greatly elated at this successful encounter. The details of our losses have already been communicated to the Secretary of State by cablegram.

4. The 15-pounder ammunition for the column under Brevet Major Young, 2,190 rounds, was, in accordance with telegram from the War Office, shipped for Natal, together with 1,000,000 rounds of ammunition 303-in. on the 29th October

5. On the 27th ult. the "Braemar Castle" arrived with the Army Service Corps Companies for the Army Corps, and Lines of Communication. These companies were at once forwarded to the landing places of the divisions of the Army Corps, to arrange positions for organising the transport of the brigades to which they belong.

6. On the 31st ult. General Sir R. Buller, v.c., g.c.b., k.c.m.g., landed and assumed command in chief of the troops in South Africa.

7. The last report from Kimberley is dated 29th ultimo. The forces there had then 70 days' bread and meat and 42 days' forage. Every attempt has been made to collect all supplies in the neighbourhood.

There were 20 days' supply of water in the reservoir, but water was being pumped in from the Premier Mine, and it was considered that this supply would be sufficient.

8. Arrangements have been made for patrolling the railway line by employees of the railway company, and these are supported by military posts at Hex River Bridge, Fraserburg Road, and Beaufort West on the Western System, Cookhouse and Witmoos on the Central, and Molteno and Sterkstroom on the Eastern.

9. Information has been received to-day that Colesburg has been occupied by a Boer commando from the Orange Free State, and that the telegraph office has been seized by them and two sappers captured.

PRÉCIS OF EVIDENCE BY LIEUT.-GENERAL THE LORD METHUEN, G.C.B., C.M.G., K.C.V.O.

(See Questions 14,135-14,469.)

"Inadequacy of force."

From the information in the possession of Sir Redvers Buller I gathered from him that, so far as he could judge, I had no reason for anticipating a determined resistance from the enemy in any very large numbers between Orange River and Kimberley, though, probably, they would elect to fight on the Modder.

My movements were to be made with as great celerity as possible, because Kimberley seemed to be in straits according to Mr. Rhodes, and because there was the danger of reinforcements coming from Natal to the enemy directly they heard of my advance. I had to relieve Kimberley, throw in a large supply of provisions, clear out the non-combatants, and return to Orange River.

To fulfil these conditions it would not have been an easy matter to march through the country with a large force, because of the limited amount of mule transport, I had no ox transport, and the small supply of water in the country I had to traverse. For instance, after the exhausting day of the Graspan fight there was only one well with a limited supply of water and a pond of muddy water for my entire force of men, horses, and mules.

As matters turned out, the enemy made a determined resistance from the first, and as their force consisted entirely of mounted men they could on the defence change their position with the utmost rapidity, changing thereby a flank into a frontal attack; notably so at Graspan.

In such an open country, and against a force so composed, I consider my mounted force of one Cavalry regiment and 120 mounted Colonials inadequate. A battery of Horse Artillery would have proved of great value.

The horses were soon quite worn out, for they were in poor condition when they left Orange River, being dependent entirely on their insufficient ration; there was no grazing at Orange River.

The above remarks refer to the time between leaving Orange River and encamping at Modder River.

As regards the Magersfontein reverse, without wishing to rake up more than I can help, the disputed question as to whether, or no, my force should have marched round the enemy's left flank, I consider that such a movement, entailing, as it did, quitting my line of communications, leaving the strong ridge of which Magersfontein formed the key in the enemy's hands, would have been unjustifiably hazardous. My reason for saying so was because my force was not sufficiently mobile, nor was my mounted force, augmented by one Cavalry regiment, adequate. The question of transport would have been a matter of difficulty, supposing my force had been adequate for the task set it.

After Lord Roberts gave me the Kimberley command, until he reached Pretoria, my force was adequate.

"Shooting."

"Regulars."

The shooting of the Regular troops was conducted under exceptional difficulties on account of the clearness of the atmosphere, and because the enemy offered no good target.

But my opinion, gained from my experience during the Tirah and South African campaigns, is that the shooting of our Infantry is not worthy of the accuracy and long range powers possessed by the present rifle.

No money can be so well spent by the nation on the Army as it can be on musketry practice.

I do not lay the blame on the soldier for his want of precision in aiming, or his lack of knowledge in judging distance correctly. I blame ourselves because we have set far too much stress on the "figure of merit" in the different battalions in the Army, which, in the opinion of many, would be far better abolished. We require to devote far more time, money, and intelligent interest on musketry practice, specially at movable targets. We should see that the soldier, whilst shooting, takes care he does not offer a target to the enemy. Good shooting, accurate judging of

distance, and intelligent use of ground are the very essence of success in modern warfare, and well worth the purchase at a heavy price.

The shooting of the Militia. When I say that in many cases the men had not even gone through their musketry practice, and were recruits in a musketry sense, I do not think I need go any further.

The shooting of the Imperial Yeomanry. I do not suppose any men would be more surprised than the Yeomen were I to say their marksmanship was satisfactory.

Anyone who has any knowledge of Volunteers and Yeomen will know how very seldom you find the combination of a man who is a good horseman and also a proficient with a rifle.

We have now to make the Yeomen know that his riding powers are of little value unless he is at any rate a fair shot.

The shooting of the Colonials from the Cape, Australia, New Zealand, and Tasmania varied very much, but in some corps was decidedly good. Making good use of ground came natural to them. Although the Colonials from Australia, New Zealand, and Tasmania joined me later on in the campaign, it is as well to include them in my evidence. As soon as the weak men were weeded out, and the troops were in condition, there was no question as to the men marching well. I cannot ever recollect the men not being ready to do more than I asked them to perform. I gladly include the Militia and the "Volunteer companies" in this statement. As long as the men are well fed and taken care of by their officers, one need not fear stragglers. I except as a rule the men of Section D from the above remarks, as they fell out, and we left a good many behind us at different places.

I do not venture an opinion on the Cavalry soldier. As regards the Yeomanry of the first contingent, I think on the whole their horsemanship was quite satisfactory.

As regards the Colonial corps, the rider and horse were one.

The Artillery were the best horsemasters in my force.

The Cavalry next.

The Yeomen and Colonials seemed at first to have an idea I had an unlimited supply of horses always ready for them at a moment's notice. After I made them march on foot for some little time they seemed to realise the value of riding, and in time became fair horsemasters.

We have in peace time to make the Colonial and Yeoman understand what a horse can do if properly tended, for at present they have very little idea of saving a horse or nursing a tender back.

The Boers taught us the advantage of narrow, deep trenches, the line being scarcely visible. We were at first too apt to show our line of defence.

Our men had not much idea of selecting sites for entrenchments, or using configuration of ground to conceal themselves; the officers were not strong on this point. This is the fault of our peace training, and the want of suitable ground for practising entrenching.

The Boers and Colonials made use of ground instinctively, probably from living in country away from towns, and many of them accustomed to stalking game.

As I have already said, we have plenty to learn in this respect.

In the Guards very fine.

In the Regulars very fair.

In the Militia fair in some battalions, indifferent in others. My remarks are limited up to the time the troops reached Pretoria.

Militia.

Imperial Yeomanry.

Colonials.

Marching.

Horsemen and ship.

Horsemasters, Artillery, Cavalry.

Yeoman and Colonials.

"Intrenchment and cover."

Cover.

Physical.

Guards, Line.

Militia.

In the Yeomanry of the first contingent the physique and stamina varied greatly, which fact I assume accounts for the large number who went home early in the war. A large percentage of those who found their way into hospital were either not strong enough or energetic enough to risk a second venture on the veldt. There was a very marked improvement in this respect in the second contingent of Yeomanry, for they did their best to avoid going into hospital, and then rejoined without delay. It is only fair to those men in the 1st Yeomanry who stayed out the whole of their time, many at very great self-sacrifice, and saw the really hard work dating from the time we left Krugersdorp in July, 1900, to make this remark, and also because in the event of the Yeomanry being called upon to serve in any future campaign it is as well to bear in mind this abnormally large wastage in war.

With the exception of the objects of the above remarks, I can conceive no troops possessed of higher morale than the men whom I had the honour to command throughout the campaign, and I hope I may not be out of order if I include the second contingent of Yeomanry, the "Volunteer companies," and the Volunteers in the other branches, and the Rhodesian Police in these remarks, all of whom served under me in the latter part of the war.

The Cavalry soldier. What struck me in comparing him with the Yeoman or Colonial was the lack of individual initiative. To give an example of what I mean: I was marching through the Marico district, living from hand to mouth. I noticed some nosebags of the Cavalry whilst on the march empty, although the Yeomen and Colonials had their's all full of mealies. The two latter required no telling; the Cavalry soldier, on the contrary, had probably received no definite instructions, he had not been trained to look out for himself, and used his own intelligence. He is dependent on his officer or non-commissioned officer, and if he finds himself alone he gets into difficulties.

The shrewdest men I have ever had to deal with are the Colonials; anything they do not know is not worth knowing. They were quite the Boer's equal in everything but courage, in which quality they excelled him greatly.

The Yeomanry gained in military knowledge to a surprising extent during the campaign. They bought their experience rather expensively at first, but I could place implicit reliance in them after a short time. This good result was due to their individual intelligence, their independence, and the confidence they, with justice, placed on the leading of many of their officers.

The Royal Engineer fitted himself into any job, seemed theoretically and practically well educated for work on service, and it made no difference whether the officer was by his side or not.

I question whether there is very much room for improvement in the gunner as a fighting machine. Most of my time in action was spent with a battery, and I give the officers the utmost credit for the fine fighting soldier they have formed out of the same material supplied to the Infantry. The gunner thinks of nothing but his horses and gun, and there is little more he can be taught about either.

The Regimental Officer.

A very great improvement has been shown of late years in the knowledge possessed and the interest taken in his profession by the regimental officer.

No doubt there is much more to be done. If they have shortcomings let us be fair, and not lay all the blame on them, but admit frankly the shortcomings belong to our system, and sometimes are our own. You cannot make bricks without straw, and can anything have been more disheartening to a zealous officer than to find himself in command of a company reduced from various causes to a unit not worth commanding? Added to this, he often enough finds himself restricted to ground quite inadequate or unadapted for tactical instruction.

The best young officers I have ever met were serving in native regiments in India, and why? Because they had commands in which they could take interest, plenty of ground for practice, and occupying positions of responsibility. It is this system which establishes the keenness of Continental armies, and if we wish

to stimulate emulation in our regimental officers assuredly the remedy lies in ourselves.

I hold no brief for them, but they have been my best friends, and the more intelligent work I have given them, the more I have forced them to be independent, and not to rest on their seniors for support, the better and keener soldiers they were for it.

Whether the double company system would not be a wise innovation, considering our small companies, I have for many years thought worth consideration, and also whether you might not endeavour to strengthen the territorial system by placing, so far as possible, officers in the regiments, Militia and Regulars, belonging to their own counties.

It has been stated that officers cannot draw up a report. My experience on service does not bear out that statement. From the time I left Orange River to the time I left Modder River to take up my command at Kimberley the reports and the sketches were as clear and comprehensive as they could well be under the conditions of modern warfare, i.e., the difficulties entailed by smokeless powder and long range fire. Later on in the war the short reports sent me from the front were seldom misleading.

What is required is not a well-finished sketch and a verbose report, but a rapid sketch, the situation described in as few words as possible, in a clear hand.

I have already spoken about the training of the Infantry.

Musketry training all the year round, intelligent seeking of cover, a sufficiently large unit to give an officer interest in his command, and ample space on which to work. Given these conditions, let every opportunity be offered to the best officer to see his way to promotion as a reward for his zeal and ability.

The Artillery officer, quite apart from his thorough military education at Woolwich, shows the good result of having an independent command. As a major he has a self-contained unit in the battery, and the three subalterns the same in their three sections, hence a very efficient body of officers.

The great disadvantage a General labours under in our Army is going on service with a staff strange to him, though in the Army Corps system this will be rectified. The Staff.

It is essential, if a General is to be well served and to have his brain free to think out the general scheme, that he should be able with confidence to leave all details in the hands of his staff. For this reason it is essential the Staff officers should have passed through the Staff College, or else have had a thorough practical experience of Staff work on active service or in time of peace. To place any regimental officer, however capable, without the above qualifications in a position of trust on the Staff is unfair to himself, and likely to prove of danger to the country. More can be made of the fine training given at the Staff College than at present. The officers who go there should be manly, practical men, and more care exercised in shutting out the College to men who know everything, but can do nothing. There is a feeling now that if once the P.S.C. is gained this is a certain pass for employment, whereas it should be no such thing. Only the best men should be selected, and more men should be encouraged to go there, so that there should be a larger choice to select from. Unquestionably, during the campaign many regimental officers with inadequate training filled Staff billets, which would have been far better filled had we possessed a larger reserve of passed Staff College officers than we have at present.

Then again it should be understood that the place of Professor at the Staff College should be a stepping-stone to high Staff appointments; they should be men admittedly leaders in the field, as well as men of sound theoretical knowledge; men whose value is known throughout the Army. Far more care should be taken that an officer goes back to regimental duty from Staff employment; "once on the Staff, always on the Staff" means injury to the man and the Service.

I speak with some knowledge of the Staff College, because I was allowed as a full colonel to attend the second year's course as a Volunteer.

A.B. No remarks, except that they were very ample and of very good quality.

C. I knew of none.

D. The quality of the horses has been reported on by the Commission on "Remount," and I do not think I can say more.

Appendix H.

4. Supplies of ammunition. Equipment, Food, and Forage.

Appendix H. I do not see I can give any information of value, as it is a big question. If the Commission would name any special points I might be able to answer them.

5. Land Transport.

I was quite satisfied with the Medical Staff Corps. The new and sweeping changes were recognised as necessary, and should give the Army an efficient Medical Staff Corps. The civilian surgeons, fresh from the hospitals, and up to all modern requirements, were of great value. I should judge that their services should be utilised in any future campaigns.

6. Adequacy of Medical and Engineer Services.

The orderlies were not always good, but we are inclined to forget a large number were makeshifts from the Regulars and Militia.

I have seen more than my share of sisters and nurses, and the Army owe them a very deep debt of gratitude.

The Engineer service was too weak during the latter part of the campaign, being supplemented by natives, but was always very efficient.

I know the Artillery officers will repudiate my statement, but I cannot think our field gun equalled the Creuzot in range, nor do I think we found the range as quickly or accurately as the enemy.

The Pom-pom was of value, very light, it could easily accompany a mounted force. It did not, perhaps, do great execution, but it frightened the enemy.

The Lyddite shell did not come up to its reputation, but I always took one howitzer with me in the hills, as it terrified the enemy more than any other arm.

We had no reason to complain of the accuracy or range of our rifle, though the mechanism and general finish of the Mauser are superior.

The Maxim never had a good chance, for the only occasion when it would have been of value, i.e., at Tweefontein, I had none.

METHUEN, Lieut.-General.

29th January, 1903.

APPENDIX I.

Appendix I.

PRECIS OF EVIDENCE BY LIEUT.-GENERAL SIR A. HUNTER, K.C.B., D.S.O.

(See Questions 14470-14687.)

Edinburgh, 29th January, 1903.

Sir,—Your letter of 1st January warns me to be ready to give evidence about February 13th, and calls for a précis of evidence I am prepared to give.

Before I proceed to answer categorically the points on which you seek information, let me preface my remarks with a short personal explanation, so that Lord Elgin, and those labouring with him, may understand when and why I went to South Africa:—

As early as June 4th, 1899, when I held a first-class district command at Quetta, Baluchistan, India, I was told by telegram that I was designated to be "Chief of the Staff" to General Sir Redvers Buller, who was to be Commander-in-Chief in South Africa in the event of war.

I sailed from Bombay with part of the Indian Brigade on the 21st September, 1899, and landed at Durban 5th October, 1899. General Sir Redvers Buller was expected at Capetown about 29th October, 1899, to assume supreme command in South Africa. General Sir George White was expected at Durban on 6th October, 1899, the day after I landed. Sir Redvers' orders were for me to attach myself to Sir George White as a temporary measure, acquaint myself with the condition, distribution, supply, transport, etc., of the forces in Natal (Sir George White's command) and leave Sir George White in time to join him (Sir Redvers) at Capetown on his arrival.

I proceeded to Pietermaritzburg 6th October, early and there met Major-General Sir Penn Symons. I stayed at Government House with his Excellency Hon. Sir Walter Hely Hutcheson, and learnt from him and Penn Symons the actual state of affairs and the preparedness of the local troops of the Colony for war. Sir George White arrived at Pietermaritzburg 7th October; I acted as his Chief of Staff (and never joined Sir Redvers) till after the relief of Ladysmith, when on 7th March, 1900, I was appointed to the command of Tenth Division. On 5th April, 1900, I was ordered with Tenth Division to Cape Colony, and on 19th April received from Lord Roberts, at Bloemfontein, orders to proceed to Kimberley (Tenth Division ordered to Cape Town, myself to Bloemfontein), and organise the column for the relief of Mafeking. On 3rd May, 1900, I started the relief column for Mafeking from Barkley West, and crossed the Vaal River at Windserton with the only three battalions of infantry of my division yet arrived, and my artillery, to draw as many as I could on to the top of me, and let Colonel Mahon, commanding the Mafeking column, get as clear a start as possible.

I fought at Rooidam 5th May, 1900, got to Fourteen Streams 7th May, 1900, completed the railway deviation bridge and entered the Transvaal 15th May, 1900; Mafeking was relieved 17th May, 1900. I repaired the railway to Maribogo Pan, capturing Taunings and Vryburg, occupied that line, re-occupied Mafeking. I take it it is no concern of the Commission to know that original ideas were changed as to my moves. Occupied Lichenburg 3rd June, 1900; Lord Roberts occupied Pretoria 5th June, 1900.

The Commission are, by the terms of Reference, limited in their inquiry to the last quoted date.

In quoting dates, I believe, but would not swear, I quote correctly.

TERMS OF REFERENCE.

Military Preparations for the War in South Africa.

Before outbreak I was in India. I had nothing to do with the preparation; a scheme was issued on 28th August, 1899, by Quartermaster-General in India, under orders of Commander-in-Chief, for an Indian contingent; I was given a copy, which I have.

Transport by Sea.—No connection with it. I have remarks to offer—

Taking the points in your confidential memorandum, I will now answer them in brief. I have already told you how I was employed during the time covered by the inquiry.

1. I sent in my official diary, a very complete one; Sir George White took it with all Ladysmith records; my private diary is now my only *aide memoire*. I kept a fairly complete record of my views and those given by others as to the adequacy in point of strength of the forces in the field, etc. It would be simpler to state them than to write them. I wish to be as careful as possible, and to avoid saying whatever I may, as those who differed from me are some of them dead. I will answer whatever I am asked, and hope my motive for not writing in full here will be understood.

2. *Shooting Capability.*—Shooting is greatly a matter of eyesight and practice; town-bred men naturally see worse than country-bred men, specially than hill-men.

Practice is essential; no stranger in a game country is as good as when his eye is practised to light and background. Making allowance for these things, the capability of the British soldier to shoot well is first-rate.

Marching qualities excellent.

Horsemanship good.

Horsemastership.—It depends on where the theatre of war is; in Europe I should opine our horsemastership would stand the test well. South Africa offers conditions unknown, except in parts of Canada and Australia.

Intrenchment and Cover.—Our men are clever with pick and shovel, and we soon learn what cover means with the lead flying about.

General Physique.—We shall never have an army fairly representative of the physique of the Empire till we have conscription, or pay soldiers as good artisans and something over.

Morale.—A1.

Intelligence.—Considering how long the School Board has operated, the average intelligence should be better, so far as education goes. So far as **animal cunning**, woodcraft, eyesight, and hearing, etc., go, we suffer from the defects inherent in a town-bred civilised race, but no more, if as much, as other similar races. Naturally, the faculties and fighting wits of everybody improved with prolonged experience on active service.

Suggestions for Future Training of the Men.—(a.) I advocate training men during peace over large tracts of varied country under experienced officers, who are neither too fat nor too old to "live" with them. I mean by "living," to keep with them. (b.) I suggest making manoeuvres much more practical; have sudden mobilisations and expeditions over sea, i.e., to Ireland, Isle of Man, Orkney. (c.) Non-commissioned officers might be specially trained, i.e., a Staff College for non-commissioned officers. (d.) I would pay men (pay every soldier a living wage and the rest extra) according to their value—extra for scouting, marksmanship, hill-climbing, signalling, manual dexterity, vitality, swimming, sobriety, first-class school certificates, and languages.

3. *Training and Duties of Regimental and Staff Officers.*—The only officers in the Army who receive a fair military education are Engineers and Artillerymen—even they are no better trained than they ought to be, if as well. I regard it as a personal affront, being an infantry officer, that any boy who passes through Royal Military Academy, Woolwich, is my acknow-

Appendix I. ledged superior, yet "such things be." The officers in the Army are:—

- (a.) Too few.
- (b.) Badly educated to start with.
- (c.) Badly paid.
- (d.) System of classification and promotion required.

(a.) If this country undertakes a war, take, e.g., the condition of a territorial regiment, of, say, first and second line battalions, third and fourth Militia; the line battalions both go on service, the third and fourth volunteer to a man. The line battalion is perhaps already short, by unavoidable absence, death, sickness, etc., of some few of its establishment; others flock off as embarking and disembarking officers, signalling officers, various staff billets, brigade majors, railway staff officers, press censors, gallopers, civil administrators, *ad lib.*, magistrates, transport, no end of jobs, and there is no surplus stock to draw on. The cadre of officer ought to be duplicated—in peace time use them as the proper instructors and fuglemen of the auxiliaries, and in war, when the principle of expansion is in vogue, you have something and somebody to expand with. Now you try to expand, and you deplete everybody to starvation point.

(b.) *Badly Educated to start with.*—Anybody of average intelligence can learn when they are young. I have advocated for years that the way to get officers for the Army is the same as we recruit for the Navy, *catch when young*. Teach everybody to be a fair linguist, draughtsman, field engineer—give him more than a smattering of field surveying, let each be as good on the barrack square as the sergeant-major; teach every officer to ride fairly well, and have done for ever with the disgraceful exhibitions of riding, such as are seen in all Royal processions, specially of late years. Every officer should be a marksman and a man at arms, and should be capable of imparting his knowledge to the Militia and Volunteers, if required. Take boys 12 to 14 and teach them till they are 18 or 19. By then he knows something, and is fit to be trusted with other men's lives, and to sit as another man's judge. Now he often is not.

In the auxiliaries he generally is not—no need to cite examples.

(c.) *The British Military Officer is highly underpaid.*—In no rank that I have ever yet filled has my Army pay sufficed for the requirements of the position I held, except in Egypt, when an alien Government paid me. Except in the Indian Staff Corps and in Indian Service generally, which is most pernicious and poisonous to the general welfare of the British Army, the same remark obtains everywhere.

(d.) Anybody who knows will agree with me when I instance the case of the publication of a Gazette after a campaign; hundreds of men conceive themselves to be wronged because (a) they are not mentioned in despatches; (b) being in, and they are not promoted or decorated.

Because a county player is not chosen to play in the match North v. South, or England v. Australia, as a

cricketer, he does not regard himself as disgraced. Yet, because A is mentioned and B is not, B and B's relatives resent it. The fact is, officers should be divided into two classes: those fitted for preferment to the higher grades, those fitted for the lower grades; the dividing line should be field rank (substantive), and no consideration should be tolerated, except personal merit, for admission into the advanced grade. Neither "Duke's son, cook's son, nor son of a millionaire" should go beyond the rank of captain unless he be recognised as fit to be trusted with the fate of other men. I hope to live to see this—hitherto I have not. In no point is the war in South Africa so emphatically pronounced as in the paucity of officers available for the multiplicity of billets to be filled.

4. I have never had any trouble. A good deal depended on the extent to which you made war pay for war.

- (a) I followed the normal practice. I drew transport originally, maintained it from local supplies, and sent to recognised bases to fill up supplies as required.
- (b) Excellent (very).
- (c) I dealt with none.
- (d) They varied according to their country and origin, period in South Africa before use, and worth when purchased. Hungarians were worst, country-bred best. The London 'bus horse made perfect remounts for Field Artillery teams.

5. I have no special remarks to offer. I used all kinds, and have a very fair knowledge of traction and wide knowledge of the others. Mule transport beats all in South Africa.

6. I think the *Medical Service* has been captiously criticised. I found it always as good as, in war time, you have a right to expect.

The same of *Engineer Services*. They neither of them ever failed to do for me all I thought was necessary and essential.

7. As regards *guns*, it is a wide subject, both Navy and Army.

I have remarks to offer.

As regards *rifles*, as a single firer, ours was as good as any. As a magazine loader and firer, not quite so good as the Mauser.

I conceive, as regards the remainder of suggested answers required, that the questions are somewhat vaguely couched, and as I have never, till 18 months ago, served in the United Kingdom as a field officer, I should like permission to answer direct questions.

ARCHIBALD HUNTER,
Lieut-General Commanding
Scottish District.

The Secretary to the Royal Commission on the War in South Africa, St. Stephen's House, Victoria Embankment, Westminster, London, S.W.

APPENDIX J.

Appendix J.

SELECTED TELEGRAMS AND DESPATCHES RELATING TO MATTERS REFERRED TO IN THE EVIDENCE OF GENERAL THE RT. HON. SIR REDVERS BULLER, V.C., G.C.B., G.C.M.G., AND GENERAL SIR GEORGE WHITE, V.C., G.C.B., G.C.S.I., G.C.M.G., G.C.I.E., G.C.V.O.

(See Questions 14688-15651.)

Note.—These documents are selected as being material to elucidate the evidence out of a considerable number which have been submitted to the Royal Commission by the War Office. Two, dated 12th and 13th December, were written despatches. The rest were telegrams.

From the General Officer Commanding, Natal, to the Secretary of State for War.

(Telegram.)
(No. 11.)

Ladysmith Camp, 12th October, 1899, 11.55 p.m.

The enemy, with 18 guns, have invaded Natal from Orange Free State, via Tintwa Pass, nearly due west from Ladysmith. It is probable that they are encamped to-night 10 miles west of Acton Homes. At 3 a.m. to-morrow (13th instant) I move out to meet them with 5th Lancers, the Liverpool Regiment, the Gordon Highlanders, the Manchester Regiment, the Devonshire Regiment, and one other battalion which comes from Glencoe by rail to-night, together with three Field batteries and one Mountain battery; also with about 250 Natal Carbineers, and a Colonial battery. I believe myself stronger than enemy. Spirits of troops excellent. No occasion for public alarm.

From the Commander-in-Chief to the General Officer Commanding, Cape.

(Telegram.) War Office, 16th October, 1899.

If Navy land guns, do not forget railway bridge over Orange River, near Hopetown. Important to hold this, as enemy may destroy other railway bridges over river.

From the Commander-in-Chief to the General Officer Commanding, Natal.

(Telegram.) War Office, 17th October, 1899.

Have you complied with order to put 60 days' supplies in Glencoe?

From the General Officer Commanding, Cape, to Lord Wolseley.

(Telegram.)
(No. 184, cipher.)

Cape Town, 17th October, 1899, 8.40 p.m.

I am holding Orange River railway bridge, where I now have two battalions, two squadrons of Cavalry, three companies Mounted Infantry, and four guns. I propose to further reinforce this position with brigade (division) of Artillery when they arrive so as to establish connection with Kimberley and demonstrate against any Boer forces operating via Bethulie or Norval's Pont Bridge. Officer Commanding troops at Orange River has reported last night that he has destroyed road bridge at Hopetown Bridge: I regret he found this was necessary, and I have asked for his reasons. I have not asked formally for naval assistance, but am in communication with Admiral as to what amount of help he can render.

From the General Officer Commanding, Cape, to the Secretary of State for War.

(Telegram.)
(No. 185, cipher.)

Cape Town, 17th October, 1899, 8.40 p.m.

I have not asked formally for naval assistance beyond asking Admiral his opinion as to their employment. Consider that 300 men and two 12-prs. would be most useful to assist in defence of advance depot at Molteno until the arrival of reinforcements expected; the most important question of the moment is to make these advance depots so secure that we can commence to stock them at once. When troops arrive the line of railway will be blocked; rolling stock is I fear not sufficient for simultaneous movement of troops from Port Elizabeth, East London and Cape Town.

From General Sir George White to the Secretary of State for War.

(Telegram.)
(No. 30.)

Ladysmith Camp, 18th October, 1899, 12.10 p.m.

Telegram from Natal Governor last night states that he has evidence, which he considers trustworthy, to the effect that the enemy's plan is to hold me here in Glencoe while striking down through Zululand against Pietermaritzburg and Durban. This news is not unlikely to prove correct, as certain indications here seem to point in that direction. Although detaching troops for the purpose weakens my position here immensely, I cannot disappoint the Governor's appeal for adequate provision for his capital nor the possible issue involved. I have therefore sent him 19th Hussars, five squadrons Imperial Light Horse, and seven companies Liverpool Regiment, as well as one Field battery and half 2nd Bn. King's Royal Rifle Corps, the other half being at present at Pietermaritzburg. Estcourt has also been reinforced with one squadron Imperial Light Horse and one company Liverpool Regiment, together with armoured train. General Symons maintains his position near Dundee; he has a large supply of food, forage, &c., for over 60 days, as well as ample ammunition, medical, surgical, and other stores; he has perfect confidence in his power to hold his post against attack. The force here occupies commanding positions which are being strongly fortified and covers Ladysmith.

From the Secretary of State for War to the General Officer Commanding, Natal.

(Telegram.)
(No. 473, cipher.)

War Office, 25th October, 1899, 9 p.m.

Have you trustworthy information confirming Governor's apprehension of Boer attack on Durban or Pietermaritzburg? Are these places threatened by Joubert's force? Do you anticipate that they will be attacked by large numbers from the north, and that attacking column will have heavy guns? Are you well supplied with information as to movements of northern forces?

(Received through Colonial Office.)
From the Governor, Natal.

(Telegram.)
(No. 2.)

Pietermaritzburg, 26th October, 1899, 1.40 p.m.

Following received from White:—

"I most earnestly request that pressure may not be put on me to reduce force here. The report of threat of attack on Pietermaritzburg, through Greytown, may be misleading. All the enemy's efforts so far have been directed against army. If I am strong here, and can strike out, country is unconquered. If I am shut in here the Colony is at mercy of enemy, and will have to be reconquered from the sea. While I have sufficient forces to strike out they dare not do more than raid; if I am reduced in force, I cannot count on striking out. Enemy's guns range further than ours, and our men cannot be expected to face heavy loss, day after day, fighting superior numbers in strong positions. I consider Rifle Brigade and Border Regiment could best be used here in the interests of the Colony, but will not press for them. The effect of dissemination of forces at Dundee, even on victorious troops, is a lesson. A small force cannot save you if the troops here are shut in, though it might help me to deal a decisive blow."

I have replied as follows:—

"Object of my telegram of yesterday was to ascertain your intentions, not to put pressure on you. You need

Appendix J.

have no anxiety on that head. Your reasoning appears to be common sense, and I concur in your decision. Now that I know your intentions, I shall make my own arrangements here in consultation with Officer Commanding Lines of Communication. Shall you require 'Powerful's' 12-pr., or may I count on them for Durban or Pietermaritzburg if needed?"

I am consulting with Officer Commanding Lines of Communication, and we both think that unless Commander-in-Chief sees strong objection, Rifle Brigade should be landed in Natal.

From the General Officer Commanding, Natal, to the Secretary of State for War.

(Telegram.) Ladysmith, 26th October, 1899.

There is no certain information to hand that an attack on places mentioned is meditated by the Boers. These places so far are not threatened by Joubert's force. So long as I am strong enough to keep the field here, I do not anticipate they will be attacked. While I hold Ladysmith the heavy guns of the enemy cannot be moved south of it, as they are transported by railway. It is very difficult to secure information from really trustworthy sources about the movements of the hostile forces. General Yule's column has marched in. After allowing them a couple of days' rest I shall move against any enemy that offers me a fair chance. Concentration of all possible forces at this place is the true policy. I have now a fine force, and will use it. If I am beaten or shut up, one or two battalions will not save either Durban or Pietermaritzburg, and they might enable me to strike decisive blow.

From the General Officer Commanding, Natal, to the Secretary of State for War.

(Telegram.) Ladysmith, 27th October, 1899.

Ladysmith is being approached by a very strong force. At 4 p.m. yesterday (Thursday, 26th) they were 15 miles distant, on Helpmakaar road; I have sent out to watch them. Orange Free State troops moved yesterday as if to join hands, concentrating on Newcastle road.

From the Secretary of State for War to the General Officer Commanding, Natal.

(Telegram.) War Office, 27th October, 1899.

Please understand that we expect you to act strictly in accordance with military requirements of the situation. Governor is within his rights in directing your attention to political consequences of your arrangements, but responsibility for the decision rests entirely with you. You may find steps necessary which may run counter to public opinion here and in the Colony, but we shall unhesitatingly support you in adhering to arrangements which seem to you militarily sound.

From the Commander-in-Chief to General Sir George White.

(Telegram.) War Office, 28th October, 1899.

Please report movements more fully. We do not know exact position at Glencoe. I do not wish in anyway to hamper your discretion, but generally I am anxious about safety of Colenso bridge.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 287.)

Cape Town, 31st October, 1899, 11.40 a.m.

Have arrived and assumed command.

From Lord Wolseley to General Sir Redvers Buller, Cape Town.

(Telegram.) War Office, 31st October, 1899.

Issue to General White, who is now one of your Generals, whatever orders you may think best.

White's telegrams lead me to fancy that he means to hold on and allow himself to be besieged in Ladysmith. Is he wise to do this, which will place all Natal at enemy's mercy? I warned him before you left of what seemed to me the importance of Colenso, where I wish he was now, with the river rising from the rains. But you are the best judge, and we all trust your judgment.

From General Sir Redvers Buller to General Sir George White.

(Telegram.)

(No. 3, cipher)

Cape Town, 1st November, 1899.

Your telegram of 30th October. Regarding exchange

of prisoners, as the prisoners we took have already left Natal, I think it would cause a bad impression here to send them back at once. Cannot you temporise for a while? In addition to your telegram to me one has come to Governor from Governor, Natal, in which he says you are sending Dublin Fusiliers to Colenso as only course open to save the Colony. Please telegraph me accurate description of your view of the situation. I doubt if Boers will ever attack you if entrenched. Hitherto you have gone out to attack them. Can you not entrench and await events, if not at Ladysmith then behind Tugela at Colenso?

No reinforcements can reach you for at least 14 days. Why not try and play the game now played by the Boers?

The only thing I can do is to send some of the fleet to Durban to protect our base; let me know if you wish that done. Please telegraph to me as explicitly as possible.

From the Secretary of State for War to General Sir Redvers Buller

(Telegram.)

War Office, 1st November, 1899, 7.55 p.m.

Secret. We are not in a position here to form adequate judgment on recent military operations. Please remember that you are absolutely responsible for distribution of all subordinate commands, and that no consideration must be allowed to stand in the way of putting the most efficient men in places of greatest difficulty.

Personal and private. The above telegram represents the views of the Defence Committee of the Cabinet.

From General Sir Redvers Buller to the Commander-in-Chief.

(Telegram.)

(No. 5, cipher.)

Cape Town, 1st November, 1899, 4.15 p.m.

Your telegram of 31st October. I suggested to White that Colenso and the line of Tugela River offers a promising position, but he has selected Ladysmith, which he says is strongly entrenched and whence he could not now withdraw. I suspect that in this he is right. His supplies are there. If he sends them back in advance he might be isolated without them, and *vice versa* he might lose them, also his men must want rest badly. As to Durban, I have arranged with the Admiral to protect it; but Pietermaritzburg is at present indefensible. On the west Kimberley is howling to be relieved, the bridge over the Modder River being destroyed; I have told High Commissioner that in my estimation to attempt its relief would be mere throwing into it men that I want badly elsewhere, to eat its supplies, already said to be little enough.

At Norval's Pont Bridge, Bethulie, and Aliwal North Bridge the Dutch appear to be increasing their forces, and raids into this Colony are predicted. Such is the situation which I find on arrival. My opinion is that, in these difficult circumstances, I ought to strike straight at Bloemfontein. I shall be sorry if Kimberley and Ladysmith go, but I cannot help them better, though it will be a month before I can reach it at the earliest, probably more, and the situation is likely to become very acute before that. Mule harness is what we want most; every set of value. It should be sent, as fast as it is made, in every ship. It should be on the top of the cargo, and we should be informed of each ship in which it is sent. I observe that the Admiralty have already commenced putting into one ship troops for two different ports. Do not allow this. It is better to send the ship half full, and in the end will be cheaper.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 6, cipher.)

Cape Town, 2nd November, 1899, 1 p.m.

Referring to my No. 5, cipher, of 1st November, to Commander-in-Chief, the situation has not improved. From Hunter, whom I caused to report independently of White, I learn that the position at Ladysmith is not too secure, while in Cape Colony the enemy have crossed Colesberg and Bethulie bridges, some 1,600 strong, and a commando 10,000 strong is said to be *en route* for south from Johannesburg, but this information is not yet confirmed. Railway communication between Orange River Station and De Aar Junction was interrupted yesterday, but is now restored. I learn that the first month's reserve

supply, which, when I left England, was promised to be here on 28th October, had not on this date even left England. The train with Artillery from the "Zyathla," on Tuesday was shot at near Piquitberg, and wilfully derailed at Fraserberg road, and the railway authorities think that in Dutch districts the line must be protected by troops.

I consider that I must reinforce Natal, and hang on to Orange River Bridge, giving myself time to organise the troops expected to arrive from England. I am therefore withdrawing the Waterfall River garrison at Stormberg and Naauwpoort. Gatacre's division as it arrives I shall send to Natal, and Methuen's and Clery's must try to keep main line open and to relieve Kimberley. I do not wish to be pessimistic, but it seems to me that I shall have to wait till March* to commence active offensive operations. Meantime the Government should, if possible, prevent importation of food stuffs into Transvaal via Delagoa Bay, and should largely strengthen the fleet here.

In regard to the refugees, the above military policy will probably increase the existing difficulties, and large quantities of supplies should be immediately sent out.

* In a further telegram, dated 6th November, Sir Redvers Buller says for "March" read "January."

From the General Officer Commanding Lines of Communication, Natal, to the Secretary of State for War.

(Telegram.)

Pietermaritzburg, 2nd November, 1899, 11.50 p.m.

Your telegram, 1st, November. Telegram No. 104, 29th October, referred to Ladysmith only, I think, and calculated supplies available from every source for force there only. The actual state of supplies, both provisions and forage, for whole force now in Natal is as follows:—At Maritzburg 6 days, at Estcourt 1 day, at Colenso two days, at Eshowe half a day, Ladysmith 50 days; for the actual strength now stationed at the various stations I have at Maritzburg 65 days, Estcourt 100 days, Colenso 50 days, Eshowe 100 days, and Ladysmith 60 days. In both cases the figures given for Ladysmith are taken from their last return, but are not to be relied on, and can be taken as about 10 days under what they have actually.

From the Quarter-Master-General to General Sir Redvers Buller.

(Telegram.)

(No. 2A, cipher.) War Office, 3rd November, 1899.

Your No. R 15, 1st November, asks that supplies may be consigned to Cape Town, Port Elizabeth, and East London; but your No. 6, cipher, of 2nd November indicates that you only intend to use at present Cape Town and Durban. Supplies will therefore be consigned Cape Town for orders, unless you wish otherwise, in which case wire your wishes.

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)

(No. 3, cipher.) War Office, 3rd November, 1899.

Your telegram 2nd November, No. 6, cipher. Are you of opinion that General Gatacre's division, which you now propose to send to Natal, should be replaced in Cape Colony by another division?

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)

(No. 4, cipher.) War Office, 3rd November, 1899.

Your telegram 2nd November. No. 6, cipher. In reference to the concluding sentence, please confer with the civil authorities as to feeding refugees. Ought not this to be undertaken by them? In regard to transport of supplies we could help.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 9, cipher.)

Cape Town, 3rd November, 1899, 12.55 p.m.

Yesterday telegraphic connection with Ladysmith was interrupted, and White's force is isolated. He is well supplied with everything except ammunition for his naval 12-prc., which are the only guns he has that can compete with the hostile artillery. I regard the situation

as one of extreme gravity. Pietermaritzburg and Colenso Bridge are held by one battalion each. We are protecting Durban from the fleet. I shall despatch the first reinforcements which I receive to Durban, but I cannot conceal from myself that if the enemy previously occupy even with small force the country south of Mooi River the relief of White by troops just landed will, unless he can hold out 6 weeks at least from now, be an almost impossible operation.

I regard as essentially necessary the immediate establishment of a strict blockade of Delagoa Bay and the removal of the ends of the cable there into an English office on board ship. I have completed the withdrawal of the garrison and stores from Naauwpoort to De Aar Junction, to which place I have sent General Wood, Commanding Royal Engineer, in temporary command, and I have completed the withdrawal of the garrison and stores from Stormberg to Queenstown, at which place I have asked the High Commissioner to concentrate a force of volunteers, I am also urging the arming of Englishmen in some of the western districts; all these will, of course, have to be paid.

From the Secretary of State for War to the General Officer Commanding South Africa.

(Telegram.) War Office, 3rd November, 1899.

Your telegram No. 9, cipher. I concur, and if you can enlist a large number of serviceable men you are authorised to do so, in both colonies. Keep us informed as to your requirements for arms for this purpose.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 10, cipher.)

Cape Town, 4th November, 1899, 4.45 p.m.

Your No. 3, cipher, of 3rd November. The following are my intentions:—I propose to send to Natal to command, Clery and headquarters, 2nd Division; with him will go the first 3 brigade headquarters that arrive, excepting Guards. The 3 brigades will be composed of the first Line battalions that arrive. Headquarters, 1st Division, will land at Cape Town, and Lord Methuen will command the advance on Kimberley with Guards brigade and one other; headquarters, 3rd Division, will, as circumstances require, land at Cape Town, or East London, and will be completed with a new brigade under Fetherstonehaugh formed of the 3 extra regiments, and one from the Lines of Communication or the Colonial regiment.

I propose to take charge of the advance on Ladysmith; if providentially we are successful there and at Kimberley, I think collapse of opposition possible. These proposals are subject to the High Commissioner's view of state of Cape Colony, and to what may happen in meantime anywhere else.

The preparation of an extra division seems desirable, but I do not yet see need for its despatch from England.

I shall speak with more confidence when I have seen French, who is, I hope, en route here from Ladysmith.

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)

(No. 32.) War Office, 4th November, 1899, 5 p.m.

Your No. 6,* cipher telegram, 2nd November. As to supplies, see my telegram, No. 481, 26th October, and No. 517, 31st October. 28th October was date mentioned to you for completion of first month in England not for delivery of supplies in South Africa, they had all been shipped by the 30th October, see my telegram No. 17 code, 2nd November. Second month was ordered 30th September, and completion in England promised about 18th November, about four days of it have been shipped, and all the groceries are promised by 9th November shipment is made as stuff comes in. Third month's supply for double the number of first and second months were ordered 19th October, completion expected in England by 7th December, every endeavour being made to expedite despatch. You were communicated with yesterday as to destination in reply to your No. R 15, 1st November.

Appendix J. *From the Secretary of State for War to the General Officer Commanding South Africa.*

(Telegram.)
(No. 5, cipher.) War Office, 4th November, 1899.

Referring to telegram to Secretary of State for Colonies from High Commissioner, 27th October, No. 4. If the force of 2,000 is raised as mounted troops, they can be paid the same rates as have been given to the Imperial Light Horse, but whether such force is necessary rests with you to decide. If you do consider it necessary to raise the force, but as Infantry, you should say what rate should in your opinion be given.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)
(No. 03, code.) Cape Town, 5th November, 1899,
11.35 a.m.

In my No. 10 cipher of 4th November, three indicates force to be sent on to Natal. At least 40 days' complete rations for that force and one brigade division, Royal Artillery, one howitzer battery, one Cavalry regiment, and 400 Mounted Infantry in addition should be sent immediately direct to Natal in special ships. The delays caused, if supplies for the two bases are loaded indiscriminately in same ships, are now dangerous and, owing to the two commands having been separated, I have no information regarding them, Ward being at Ladysmith.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)
(No. 12, cipher.) Cape Town, 5th November, 1899,
4.25 p.m.

South of Norval's Pont Bridge and Bethulie Bridge are some 3,000 of the enemy. Imperial troops hold Orange river station and De Aar Junction, and half battalion of the Berkshire Regiment and Volunteers hold Queens-town. I am raising Volunteers for protection of eastern and western line. Cradock and Graaf Reinet districts are simmering; Cape Town is only garrisoned by 500 Volunteers; if Boers advance south-west, local authorities expect those districts to rebel.

There is fear also of trouble about Victoria West. In these circumstances with no available troops in the Colony I am raising whatever Volunteers I can get, in other words, I am secretly arming the English near disaffected districts. I shall report the rates of pay when they are fixed.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)
(No. 13, cipher.) Cape Town, 5th November, 1899,
8.30 p.m.

In Natal the General of Base and Communications has taken the field with all available troops, which consist of 2 battalions and levies, totalling 2,200 men, but he is short of mounted men and artillerymen. He is, I believe, now at Estcourt, having withdrawn from Colenso—I do not know why. It is reported that the line from Estcourt to Colenso is open and that the Tugela River Bridge is intact.

Governor, Natal, sends rumours which Governor here sends to England. Any news that I can trust I will telegraph at once.

From the General Officer Commanding Lines of Communication, Natal, to the Secretary of State for War.

(Telegram.)
(No. 10, No. L. 408.) Estcourt, 10th November, 1899,
10.30 a.m.

The following has been received from General White:—
Second Lieutenant Hooper, 5th Lancers, arrived safely on the 6th November. The enemy have all round us long-range guns, but I cannot ascertain the strength with which they hold their different positions. We calculate that they spread over a circle of more than 20 miles. Our position is also very extended, about 11 miles, to secure the retention of our Artillery position, which if lost would render Ladysmith untenable. This

curtails our force for offensive operations, but does not incur grave risk to Ladysmith.

Long-range bombardment by heavy guns continues daily, causing a few casualties, but doing no serious harm. A message was received this morning from General of Base and Communications in cipher, dated 5th November. To-day the Boers have sent in, under a flag of truce, a number of civil refugees from the Transvaal. A flag of truce from Ladysmith met them outside our pickets. When parties separated Boer guns fired on our flag of truce before it reached our pickets. Major Gale, R.E., who was sending a message, was wounded to-day.

I am very anxious for news, particularly as to whether the Boers are pushing south in any numbers, and whether the message sent by pigeon post reached Durban safely. The entrenchments are growing stronger daily. Provisions ample.

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)
(No. 12, cipher.) War Office, 10th November, 1899.

Your telegram of 4th November, No. 10, cipher. A division is now being prepared; but without knowing for certain whether it will be wanted, we cannot venture to take up shipping. This can be left open as long as you please; but the provision of ships, and more particularly horse transports, takes time. Are you now in a position to say by what date you will want troops?

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)
(No. 27, cipher.) Cape Town, 11th November, 1899,
7.10 p.m.

Your No. 12, cipher. The advance of the enemy seems to have been so thoroughly checked by the defence of Ladysmith that I have now some ground for hoping that the successful relief of Ladysmith and Kimberley may terminate opposition. But on the other hand, Dutch here, who can be relied upon, predict guerilla warfare as a certainty. I ought, therefore, I think, as soon as possible, to have another division. At present my great want is mounted forces, of which I am raising as many as possible. Further, should like to have as soon as possible, for service with them, a few good Special Service Officers not above the rank of Captain, Infantry Officers being preferred.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)
(No. 28, cipher.) Cape Town, 12th November, 1899,
9.45 p.m.

Two messages, dated 10th and 11th November, have been received from White. All round Ladysmith the enemy are strongly entrenched; several attacks have been made by them and all have been repulsed, but it is clear that the position is daily becoming more difficult. The Boers have 22 large guns in position which have a longer range than White's field guns. The bombardment still continues, but there are no serious casualties. Clerly left for Natal to-day; as soon as I send him Artillery he ought to be able to advance, but no ships containing Artillery have yet arrived.

From the Secretary of State for War to the General Officer Commanding-in-Chief, South Africa.

(Telegram.)
(No. 18, cipher.) War Office, 14th November, 1899.

Your No. 27, cipher, of 11th November. The additional division of Infantry under Sir Charles Warren will with the least possible delay be despatched. The constitution of the division is the same as that of those in the Army Corps, but instead of one squadron, it is accompanied by one complete regiment of Cavalry.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 30, cipher.) Cape Town, 14th November, 1899, 3.33 p.m.

Just before dawn it is often darkest. I ought not, however, to hide from you that I think the situation is extremely critical. Chieveley was occupied yesterday by the enemy in strength. At Estcourt, Hildyard has now three battalions and 6-7-pr. guns. The Infantry reinforcements will reach him daily, but "Armenian," with the Artillery, left here only last night. Neither Clery's Column in Natal nor Methuen's Column to Kimberley, will be as strong as I should like. About Bethulie, the enemy have 4,000 men, and on the news of their advance, from 500 to 800 from Cradock may join them.

I hope for the best, but the advance in Natal with Infantry who are just off the ships and are short of Cavalry and Artillery, on the Boers in positions carefully prepared, will be a risk, but it is a greater risk to leave Ladysmith alone. In case of accident, it will be essential to have more troops, a stronger fleet, and a stricter blockade of Lorenzo Marques. I think you should, as speedily as possible, send both troops and men-of-war.

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)

(No. 24, cipher.) War Office, 20th November, 1899.

With the division now under orders we can send either one or two Field Artillery brigade divisions; which do you prefer to have? It is not likely that they will reach Cape Town before end of the first week in January.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 37, cipher.)

Cape Town, 20th November, 1899, 5.5 p.m.

On the evening of 22nd November I propose to leave for Natal.

From General Sir Redvers Buller to General Gatacre, Queenstown.

(Telegram.) Cape Town, 21st November, 1899.

I calculate it will be at least 5 days and probably a week before I have a second battalion to send you or a battery of Field Artillery, but I am anxious to get into a position to protect the Indwe Mines better than we do. Do you think it would be safe for you to advance your force or part of it to Stormberg and hold that instead of Queenstown? I am told it is a good position for a force the size of yours. Of course you will have no support.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 40, cipher.)

Cape Town, 21st November, 1899, 10.50 a.m.

Your No. 24, cipher. I prefer 2 brigade divisions. I shall want them if I lose Ladysmith. I should prefer that the first brigade division sent should be equipped as Field Artillery, but should be armed with Horse Artillery guns, which are lighter in draught and sufficiently powerful.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 39, cipher.)

Cape Town, 21st November, 1899, 2.52 p.m.

I have to-day received from Clery the following message:—"Hildyard reports as follows: Midnight, 19th November. It appears from correspondence received from Ladysmith that while a containing force of enemy still invests that place, the main body has gone south in order to intercept the reinforcements. According to the natives 2 commandos have crossed the Tugela river at Colenso and will take guns up on to the hills which com-

mand Estcourt, and will make an attack to-morrow. At Willowgrange the railway is seriously threatened, and accordingly I have reinforced the 5 companies there under Kitchener with some Cavalry and 2-7-prs. I consider that the line is safe to there to-night. Hildyard ends. The situation here, as telegraphed to you yesterday, possibly may develop into something serious. If a part of the enemy's force investing Ladysmith is going to support the movement against Estcourt, then I may be forced to give up Estcourt. As you know I am tied to the railway, and Boer's tactics appear to be to keep out of the reach of attack and to work round against the railway in rear. If the battalions now due do not quickly arrive, there might be difficulty in meeting this with my small force of mounted troops. I am, however, well aware that any such backward movement would naturally delay a subsequent advance. Therefore I have instructed Hildyard that I want, if possible, not to let Estcourt go, but that he is not to be cut off, and that he is to be ready, if necessary, to fall back towards Barton on Mooi river."

I have told Clery to hold on to Estcourt if possible. Three battalions left yesterday for Durban, and 1 goes to-day.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 41, cipher.)

Cape Town, 21st November, 1899, 2.50 p.m.

Methuen with Naval Brigade, with 4-12-pr. 12-cwt. guns, 9th Lancers, 63rd and 64th Batteries, Field Artillery, Guards, and 9th Brigade, and details, marched from Orange River this morning on Kimberley; he hopes to arrive there on the 26th instant.

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)

(No. 26, cipher.) War Office, 22nd November, 1899.

In reply to your No. 40, cipher. Three Horse Artillery batteries with separate ammunition column are being sent in addition to the Field Artillery Brigade Division accompanying Sir C. Warren's Division. To send Field Artillery with Horse Artillery guns is not considered expedient.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 49, cipher.)

Pietermaritzburg, 29th November, 1899, 3.38 p.m.

To forecast the future is difficult. My opinion is that whatever happens I shall, to restore order and protect communications, require a large force of mounted men. Last week Joubert raided this colony with 4,000 mounted men, and till he camped at Highlands we were helpless. As to siege train which you are preparing I do not see any real use for it, and I only accepted them because I thought you probably wished to employ Garrison Artillery. Saddlery, Colonial equipment, is what I shall want; it has only to last 6 months, and the same sort of equipment as was supplied to British South Africa Company, will do very well.

I shall mount Infantry and let them ride in trousers as the Boers do. (This explains my code telegram No. 098, of to-day.)

From the Secretary of State for War to General Sir Redvers Buller, Pietermaritzburg.

(Telegram.)

(No. 32, cipher.)

War Office, 30th November, 1899, 4.30 p.m.

A 6th division is being prepared, which, when ready, can follow the 5th Division, which is now being despatched. Can you let me know whether you are likely to want a 6th division, and if so, when? If it will be wanted soon, the horse transports must be at once got ready. Afterwards, if wanted, we can prepare a 7th division.

Appendix J. *From General Sir Redvers Buller to the Secretary of State for War.* *General Sir Redvers Buller to the Secretary of State for War.*

(Telegram.)
(No. 52, cipher.)

Pietermaritzburg, 1st December, 1899, 3 a.m.
Your No. 32, cipher. The situation still appears to me extremely grave. Methuen's force seems to have all it can do to reach Kimberley; and to relieve Ladysmith will be a hard task for me. In the centre of Cape Colony the state of affairs becomes worse, and we shall not be too strong to deal with it even with the aid of the 5th Division. Mafeking meanwhile will without doubt fall; this will free a considerable force of the enemy to attack Matabililand. Consequently, if the enemy maintain their opposition another division will certainly be wanted or its equivalent in men. I think we have enough field guns, but I should like 8 or 10 4.7-inch naval guns, or similar long range guns, on good travelling carriages. We want a mounting off which the gun can be lifted so as to travel, separate from its mounting, in a bullock cart. People here assert that ammunition of all sorts is being smuggled into Delagoa Bay. Delagoa Bay should, I think, be blockaded absolutely and at once; this would be of more help to us than any number of divisions.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)
(No. 70, cipher.)

Frere Camp, 10th December, 1899, 11.25 a.m.
I hope by the 1st January to have Methuen's force concentrated about Naauwpoort, Warren with Division about Middleburg Road, and Gatacre reinforced by 2 Cavalry regiments and 2 Brigades from Natal about Stormberg. I ought by the end of January, to have stamped out the rebellion in Cape Colony, overrun the Orange Free State, and be in a position to cross the Vaal river. I shall at that moment want the 6th Division. I have enough Cavalry; I do not want more. But I do want mounted men, and shall increasingly want them; these, however, I am able to improvise here from material in comparison with which Cavalry are really not so useful.

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)
(No. 47, cipher.)

War Office, 10th December, 1899.
Your No. 70, cipher. We have just heard of Gatacre's reverse. Do you think that the 6th Division should arrive earlier on this account?

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)
(No. 73, cipher.)

Frere Camp, 11th December, 1899, 9.30 a.m.
Your No. 47, cipher. The earlier the troops reach here the better, thereby giving us longer time to equip them and get them into condition; in this respect we have been over hurried of late. Except in these respects Gatacre's reverse does not seem to me to affect the date on which the 6th Division should be despatched. Of this reverse I have no details beyond a statement of losses. He, however, telegraphs from Molteno, and the inference is that although he will concentrate at Queenstown his position at Putter's Kraal is not immediately affected. The reverse accordingly amounts to the loss of about 1,000 Infantry by getting into bad country. The Derbyshire Regiment is due at Durban to-morrow, and that I am sending on to him; further, I have always looked forward to employing the 5th Division in the midland districts. Although my knowledge is imperfect I do not see any cause for anxiety.

(Written Despatch.)

Frere Camp,

Sir,

12th December, 1899.

The 13th Hussars march in here to-morrow, and the whole of the troops I can expect to collect for the relief of Ladysmith will then be here.

I to-day moved out General Barton's Brigade, less $\frac{1}{2}$ battalion Royal Scots Fusiliers, to a hill about 2 miles the Colenso side of Chieveley Station. With the Brigade went two Naval 4.7-in. guns and six Naval 12-prs., and I hope they will be able to hold some of the defences of Colenso.

After a careful reconnaissance by telescope I came to this conclusion, that a direct assault upon the enemy's position at Colenso, and result of it, would be too costly. The approach to the drift this side is a dead flat without any cover, and the enemy have a very strong position which they have systematically fortified just the other side of this drift.

When that is passed there is a steep defile commanded on both sides by high rocky hills to be ascended, and at the top is a very favourable position for the enemy. I enclose a letter from Mr. Lang, which is really a good description.

I have determined, therefore, to leave the 6th Brigade in position in front of Colenso, and to march on the night of the 13th with the whole force available to Springfield, force the passage of Potgieter's Drift, and then advance to Ladysmith by the Acton Homes—Ladysmith road.

It is open country to Springfield, and open country again about 2 miles the other side of the Tugela to Ladysmith; but I shall have a train of about 400 ox-wagons, and shall have 4 miles of difficult country about the drift. The operation, therefore, is not a very pleasant one, but it has this great advantage, I am sure to get water; on the other road the 9 miles of fighting from Colenso to Onderbroek would have been in a waterless country.

I attach a state of the force here.*

At the Cape Lord Methuen should be just attacking the positions about Spytfontein. He has been reinforced by a battery of 5-in. howitzers, and a Naval 4.7-in. gun, and if, as I have told him, he will simply shell one end of the position for some days, I have no doubt of his success.

General French is holding his own about Naauwpoort. General Gatacre having tried a night attack on Stormberg, was misled and met with a serious reverse, losing two guns and nearly 800 men.

He will be reinforced by the Derbyshire Regiment the moment they arrive, and I do not think the reverse he has suffered will compromise his position, but it will strengthen the hands of the disaffected in the Colony, and intensify the existing strain.

I hope as soon as I am through at Ladysmith to get back to the old Colony, and to endeavour to deal with the state of rebellion now existing there.

I should mention that, having no Cavalry bearer company here, and no divisional field hospital, and expecting a severe fight at Potgieter's Drift, which is 25 miles from the railway, I have organised a local bearer company of half whites, half natives, who will carry out any wounded.

I have the honour to be,

Sir,

Your obedient Servant,
REDVERS BULLER,
General.

Rosetta Station,
7th December, 1899.

Sir,

If the Tugela is crossed about 10 or 15 miles above Colenso it will be found the country is more open to get to Ladysmith, and there is lots of room to outflank the enemy. The country is also more or less flat, with odd kopjes from Ladysmith north-east.

By wagon road up the Colenso road is about one of the strongest positions that could be got. It is three positions, there is only one way of getting big guns up, and that is by the road. I suppose there are trenches across by now; you cannot get on one side, it is too stony, and deep stony embankments. The second position is about 1,200 yards

from there. There are lots of big stones as big as wool-sacks. The third position is almost worse; about 3 miles farther on stones and trees.

There is one old road leading from Colenso to Ladysmith past Pieters, stony hills and deep valleys; you will also have to keep the big guns in the road for the first 5 or 6 miles, and then you are just below Umbulwana.

Yours obedient,

H. LANG,
formerly of Laing's Nek.

General Sir Redvers Buller to the Secretary of State for War.
(Written Despatch.)

Frere Camp, Natal,
13th December, 1899.

Sir,
I posted a letter to you yesterday, which, I believed, contained my last word before my advance on Ladysmith.

At the time of writing, I was fully impressed with the idea that the force under Lord Methuen was strong enough to overcome any opposition he might encounter. That hope has proved fallacious, and I heard last night that Lord Methuen's attack upon the position occupied by the enemy near Spytfontein had failed. I may observe that in Natal we heard this through Reuter, *via* Pretoria and Delagoa Bay, some hours before I heard of it from the Cape.

This has altered the general situation for the worse, and, in my opinion, so much so, that I do not think I am any longer justified in proceeding with my plans for the relief of Ladysmith by a flank march through Springfield and Potgieter's Drift.

This operation involved, as was evident from the first, the complete abandonment of my communications, and, in the event of want of success, the risk that I might share the fate of Sir G. White, and be cut off from Natal.

I had considered that, with the enemy dispirited by the failure of their plans in the west, this risk was justifiable, but I cannot think that I ought now to take such a risk. From my point of view, it will be better to lose Ladysmith altogether than to throw open Natal to the enemy.

I have arrived at this decision with considerable doubt. The real fact is, the enemy have had the whip hand of us ever since the war began, and we have had to attack with inferior force their superior forces in selected positions.

I certainly hoped to have found the relief both of Ladysmith and Kimberley less difficult than it has proved to be. I appear to have failed at Kimberley, and the undertaking in front of me is a very grave one.

Whether I win or lose, I have told General Walker that I consider the first phase of the campaign has ended, and that the time has come when both in this Colony and Cape Colony we must select and occupy strategical positions, and remain till winter on a policy of defence. During this time we must organise and train mobile columns.

I feel certain that such a policy is, and, indeed, has always been, the right one; the only reason I did not adopt it from the first was that I was, I thought, forced to try and relieve both Kimberley and Ladysmith.

Lord Methuen has, it seems, failed at Kimberley; I hope I shall not do the same at Ladysmith, but even if I do, I shall, I think, have enough troops in hand to secure South Natal, and to hold my communications until the dispositions necessary to this end can be taken.

I have the honour to be,

Sir,
Your obedient Servant,
REDVERS BULLER,
General.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)
(No. 79, cipher.)

Frere Camp, 13th December, 1899, 10.20 a.m.

I hear from Methuen that he has failed to force his way to Kimberley, and that he has retired to his entrenchments where he can maintain himself and that he thinks he can keep open his communications. I have told him that he must either fight or withdraw to Orange River; it will only be an inconvenience to lose Kimberley, but

it would be a disaster for his force to be cut off. Gatacre's misfortune and Methuen's failure sensibly affect my position; I was this day starting to march *via* Springfield and Potgieter's Drift, on Ladysmith. From the first it has been clear that as soon as I crossed the drift my communications would be quite uncovered, and the under taking meant in fact burning my boats, but I considered this action justifiable, as I hoped the news of the relief of Kimberley would dishearten the enemy. The reverse unfortunately has occurred, and I thought it too great a risk to make a flank march of 45 miles with an enormous wagon train across the front of a successful and active enemy, when the communications of our only effective force in the field would be thereby uncovered. Therefore to-day I am advancing to attack and try to force the direct road. I fully expect to be successful, but probably at heavy cost. From the first I have foreseen that the advantage gained by the enemy at the outset might only be recovered by our greater staying powers. If Methuen goes back to the Orange River the enemy probably will press their invasion of Cape Colony, and it will have to be our policy to delay the enemy and wait till winter comes. How much a blockade of Delagoa Bay would assist this policy it is not necessary for me to emphasize.

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)

(No. 49, cipher.) War Office, 14th December, 1899.

Warren has been ordered by the Commander-in-Chief to proceed immediately upon landing to take command of Methuen's force. The Commander-in-Chief considers it desirable to employ Methuen in future on Lines of Communication, but leaves his disposal to you. Gatacre also should in future, he thinks, be similarly employed; and Tucker is being sent out, to whom, if you approve, you are authorised to give Gatacre's Division. The latter you can meanwhile, if you think fit, withdraw, and you can send any good man you like to command the troops on the line of advance by which Gatacre was operating. Brigadier-General H. MacDonald is also being sent from India to command Highland Brigade, *vice* Wauchope.

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)

(No. 50, cipher.) War Office, 14th December, 1899.

On Saturday and Sunday four battalions of the 6th Division sail, and the remainder follows as soon as possible; the horse ships, however, will arrive about the 15th January. A 7th Division is being mobilised. Let me hear when you wish it to come; we must deal with the provision of ships in time.

From the Secretary of State for War to the General Officer Commanding, Cape.

(Telegram.)

(No. 49 A, cipher.) War Office, 14th December, 1899.

On arrival, Warren is to be sent immediately to assume command of the forces under Methuen. Buller will be informed of this by telegraph.

From the General Officer Commanding-in-Chief, South Africa, to the Secretary of State for War.

(Telegram.)

(No. 0215.)

Chieveley Camp,

15th December, 1899, 6.20 p.m.

I regret to report serious reverse. I moved in full strength from camp near Chieveley this morning at 4 a.m. There are two fordable places in the Tugela and it was my intention to force a passage through at one of them; they are about 2 miles apart, and my intention was to force one or the other with one brigade supported by a central brigade. General Hart was to attack the left drift, General Hildyard the right, the main road, and General Lyttelton in the centre to support either. Early in the day I saw that General Hart would not be able to force a passage and directed him to withdraw. He had, however, attacked with great gallantry and his leading

Appendix J. battalion, the Connaught Rangers, I fear, suffered a great deal. Colonel Brooke was severely wounded. I then ordered General Hildyard to advance, which he did, and his leading regiment, the East Surrey, occupied Colenso Station and the houses near the bridge. At that moment I heard that the whole of the Artillery I had sent back to that attack, namely, the 14th and 66th Field Batteries and 6 Naval 12-pr. Q.F. guns, the whole under Colonel Long, R.A., were out of action, as it appears that Colonel Long in his desire to be within effective range, advanced without any scouts or effective Infantry supports close to the river. It proved to be full of the enemy who suddenly opened a galling fire at close range, killing all their horses, and the gunners were compelled to stand to their guns. Some of the wagon teams got shelter for troops in a donga, and desperate efforts were made to bring out the field guns, but the fire was too severe and only 2 were saved by Captain Schofield and some drivers, whose names I will furnish. Another most gallant attempt with 3 teams was made by an Officer whose name I will obtain. Of the 18 horses, 13 were killed, and as several of the drivers were wounded I would not allow another attempt. It seemed they would be quite useless sacrificing loss of life in gallant attempt to force passage unsupported by Artillery. I directed the troops to withdraw, which they did in good order. Throughout the day a considerable force of the enemy was pressing on my right flank, but was kept back by mounted men under Lord Dundonald and part of General Barton's Brigade. The day was intensely hot and most trying to the troops whose conduct was excellent. We have abandoned 10 guns and lost by shell fire 1. The losses in General Hart's Brigade are I fear heavy, though the proportion of severely wounded is I hope not large. The 14th and 66th Field Batteries also suffered severe losses. We have retired to our camp at Chieveley.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)
(No. 87, cipher.) Chieveley Camp,
15th December, 1899, 11.15 p.m.

A serious question is raised by my failure to-day; I do not now consider that I am strong enough to relieve Ladysmith. Colenso is a fortress, which, if not captured by a rush could, I think, only be taken by a siege. Within the 8 miles from the point of attack there is no water and in this weather that exhausts Infantry. The place is fully entrenched. I do not think we saw either a gun or a Boer all day, but the fire brought to bear on us was very heavy. The Infantry were willing enough to fight but the intense heat absolutely exhausted them. I consider I ought to let Ladysmith go and to occupy good position for the defence of South Natal and so let time help us. But I feel I ought to consult you on such a step. 20,000 men, I consider, faced us to-day; both in arms and in position they had the advantage. They admit indeed that they suffered severely, but my men are dispirited because they have not seen a dead Boer. My losses have not been very heavy; much heavier indeed I could have made them, but the moment I failed to get on the run the result would have been the same. I was beaten. I now feel that I cannot say that with my available force I can relieve Ladysmith, and I suggest that for me to occupy a defensive position and fight it out in a country better suited to our tactics is the best thing that I can do.

From the Secretary of State for War to the General Officer Commanding, Cape.

(Telegram.)
(No. 51, cipher.) War Office, 15th December, 1899.

Has Warren arrived and assumed command at Modder River?

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)
(No. 90, cipher.) Chieveley Camp, 16th December, 1899, 1.25 p.m.
Your telegram reached me too late to answer on the 14th, but I telegraphed counter orders to the Cape. I

cannot agree with the Commander-in-Chief and allow Methuen, who has done very well, to be superseded by Warren, Commander-in-Chief, comfortable at home, has no idea of the difficulties here. It would, I think, be a fatal policy to supersede every General who failed to succeed in every fight, but I may say that, as I myself have since failed, I offer no objection in my own case, if thought desirable. The conditions are as follows: the atmosphere is tropical, the sun is vertical, the country is waterless, the watercarts improvised at the Cape are leaky beyond repair, and besides, in Methuen's case, the sandy dust is impregnated with salt. Accordingly you must camp where there is water, and water seldom is to be found at intervals of less than 10 miles. Infantry, therefore, cannot move freely more than 10 miles from their camp, and the heat dazes them. It is impossible to make accurate reconnaissances, or turning movements on any scale, for Infantry marching in the sun soon lose fighting power, while the enemy, who are all mounted, are always fresh. The enemy select their own positions and bury themselves; they are completely hidden. I shelled a position yesterday for over an hour, and the whole time we did not see anyone; all agreed that it was evacuated, but in reality it was held by a thousand men. The Connaught Rangers advanced yesterday unopposed till they crossed a piece of grass which had been recently burned, when they came under a withering fire from 3 sides, and yet they never saw their opponents for a moment. The grass was purposely burnt to give the range and also to show up the khaki uniform. Had it been winter Methuen would, I am sure, have won both his fights at Modder River easily, but in this midsummer the men get so dazed with the hot sun and the scorching that they have no dash left. Willing enough they may be, but they are physically incapacitated. I hope you will approve my orders to leave Methuen in command. The same argument applies to Gatacre.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)
(No. 91, cipher.) Chieveley, 16th December, 1899.

I feel sure from what I saw of enemy's defences yesterday that we shall want 7th Division, and as rebels are being joined by Cape Dutch in large numbers, the sooner it arrives the better. Would it be possible for you to raise 8,000 irregulars in England, organised not in regiments but in companies of 100 each? They should be equipped as Mounted Infantry, be able to shoot as well as possible, and ride decently. I would amalgamate them with colonists. A party of the West Kent Yeomanry Cavalry are amongst the best irregulars I have here. Mounted men are absolutely necessary to finish this war, or indeed to hold our own. Infantry cannot cover the distances; with them one is always obliged to attack a prepared position, the very thing which ought not to be done, and the water difficulty is tremendous. I should like some Maxim-Nordenfelt 1-pr. guns, if you can get them, to accompany mounted troops; they are wonderful weapons. The enemy yesterday used mobile 2½-inch or 3-inch guns; they made excellent practice, and ranged about 8,000 yards, but luckily their shells seldom burst. A whole gun detachment was killed by one which did. This is the sort of gun we want a few of, something which can be taken a march of 40 miles. Our field guns are excellent when they get within range, but their range is too short, and they are not sufficiently mobile.

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)
(No. 53, cipher.) War Office, 16th December, 1899.

The abandonment of White's force and its consequent surrender is regarded by the Government as a national disaster of the greatest magnitude. We would urge you to devise another attempt to carry out its relief, not necessarily *via* Colenso, making use of the additional men now arriving if you think fit.

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)

(No. 54, cipher.) War Office, 16th December, 1899.

I hope that you understand that we are greatly in favour of the policy indicated in your telegram No. 70, cipher, of raising local mounted corps, and that you are free to carry it out.

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)

(No. 55, cipher.) War Office, 16th December, 1899.

Four battalions of the 6th Division embark to-day and to-morrow, and the remaining 4 will embark next week, the Infantry of the 7th Division on 4th January and the following days. The Brigade Divisions of Field Artillery of both divisions will embark as soon as we can provide more ships. Additional Field Artillery to replace the lost guns will also be sent. Will you require any more Artillery? A Brigade of Cavalry, including a battery of Horse Artillery, will be sent as soon as ships can be provided. A considerable force of Militia and of picked Yeomanry and Volunteers will also be sent.

From the General Officer Commanding, Cape, to the Secretary of State for War.

(Telegram.)

(No. L 230, cipher.) Cape Town, 16th December, 1899.

It is intended that 10th Brigade and divisional troops of the 5th Division shall be assembled at Orange River, and 11th Brigade at De Aar Junction. Then the former march and the latter rail to Modder River to join Methuen, whence relief of Kimberley will be proceeded with under Warren's orders.

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)

(No. 56, cipher.) War Office, 17th December, 1899.

Referring to your telegram, No. 90, cipher, you have authority to leave Methuen in command of his division; but as Warren must direct operations on the Kimberley-Hopetown line, and is senior, the former must be subordinate to him.

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)

(No. 57, cipher.) War Office, 18th December, 1899.

In Natal and in Cape Colony distinct operations of very great importance are now in progress.

The prosecution of the campaign in Natal is being carried on under quite unexpected difficulties, and in the opinion of Her Majesty's Government it will require your presence and whole attention.

It has been decided by Her Majesty's Government under these circumstances, to appoint Field-Marshal Lord Roberts as Commanding-in-Chief, South Africa, his Chief of Staff being Lord Kitchener.

From the Secretary of State for War to the General Officer Commanding-in-Chief, South Africa.

(Telegram.)

(No. 59, cipher.) War Office, 18th December, 1899.

Is it possible for you to find out from White up to what date he can hold out?

From the General Officer Commanding, Cape, to the Secretary of State for War.

(Received 18th December.)

(Telegram.)

(No. L 232, cipher.) Cape Town, 18th December, 1899.

Your No. 51. cipher. I have to inform you that Warren has been stopped at De Aar Junction, and as his division is to proceed to Natal, he has received orders to return.

From General Sir Redvers Buller to the Secretary of State Appendix J. for War.

(Telegram.)

(No. 99, cipher.) Frere Camp, 18th December, 1899.

As there is no water at Chieveley, I have had to move 2 brigades back to Frere, and I doubt if I can keep the remainder where they are now supplied with water by train. Warren's division is, I hear, arriving at the Cape. I have telegraphed to them to come on here and have told White to hang on if possible. I shall now be strong enough to attempt Potgieter's Drift and at the same time to hold the railway. Methuen is thus left; I told him to fill up his supplies and get ready to hold out; I told Methuen also to lay a railway loop round Cronje's position to enable him to get his Infantry closer. I am frightened by the utter collapse of my Infantry on Friday; on my left I lost nearly 300 missing, and on my right should have lost as many more but I and my staff rode down into the dongas and forced the men to get up and go home; the men were carrying nothing but ammunition, the retirement was perfectly orderly, there was no pursuit, and the enemy's shell fire was ineffective, and they simply sat down dazed with the heat. By this my powers are limited. When, however, I get Warren's division I shall try to relieve Ladysmith by short stages; there is only one stretch for 10 miles without water, and rain perhaps may fall then; to-day the heat is terrifying.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 101, cipher.)

Frere Camp, 18th December, 1899, 9 a.m.

Your No. 53, cipher. Much obliged; exactly what I required. I was doubtful as to what weight financial considerations at Kimberley should be allowed to carry.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 103, cipher.)

Frere Camp, 18th December, 1899, 5.5 p.m.

As to your telegram No. 56, the directions which it contained had already been given, but after receiving your No. 53, I ordered 5th Division (less two battalions urgently required at De Aar Junction) to Natal.

In my estimation it is the only way by which Ladysmith can be saved.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 104, cipher.)

Frere Camp, 18th December, 1899, 5.20 p.m.

Your No. 59 cipher. White reports as follows:—"My supplies can be made to last longer than a month. The enemy are reported to be putting dead horses in the Klip River, I certainly do not do so. There is an increase of gastric fever within the last month, 180 cases have occurred. Get reinforcements as quick as possible, including Indians and enlist in both Colonies jungle men, who will form reconnoitring parties and can ride." What he means by jungle men I do not quite know, and I imagine Indians would not meet your approval.* White says he hears that considerable impression was made by the enemy's losses on 15th. I cannot form any estimate of their losses, but the Colonial forces profess to know that these amounted to 2,000, the information coming from Boer sources. To me this seems excessive.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 110, cipher.)

Frere Camp, 21st December, 1899, 11.55 a.m.

White on being informed that I had sent for the 5th Division replied as follows:—"I received your message, and was delighted to get it. For 6 weeks I have provisions

* Sir George White explained in his evidence (14884) that the expression, as telegraphed by him, was "enlist every man in both colonies who will serve and can ride."

Appendix J. for the troops, and I am confident that I shall hold this place for that time ; but bombardment steadily becomes more trying. This morning one shell caused 22 casualties; dysentery and enteritis are very rapidly increasing. For 3 weeks I can get on well, and even keep the horses moderately fit, if you desire to wait for time. It is worth waiting a little to enable you to dominate and overwhelm the enemy's guns. You should bring every heavy naval or other gun you can get hold of. In regard to occupying a position near the Tugela, from which you can maintain a continued attack, water will be a difficulty. Do you think that you can arrange reservoirs, pumping stations or pipes?"

This season the drought is severe. I will try all that I can do, but my transport difficulties are very great.

From Field-Marshal Lord Roberts to General Sir Redvers Buller.

(Telegram.) War Office, 23rd December, 1899.

To carry out the original plan of campaign and advance through the Orange Free State in force appears to me to be the best way of co-operating with you when I arrive in South Africa. This will be facilitated by the following expression of my opinions :—I imagine from what I learn here that you are only waiting for reinforcements sufficient to enable you to hold at or near Chieveley an entrenched camp, and with the rest of the troops to turn the strong position which the enemy hold on the Tugela. The situation will have sensibly improved if you succeed, and I think it would then be advisable to evacuate Ladysmith and hold the line of the Tugela until the general advance is made. What troops could you spare on completing this operation? So also if Methuen releases Kimberley, I think he ought to fall back on the Orange River for a concentration in force on that line prior to advancing on Bloemfontein. We should never lose sight of the importance of concentrating all the available forces in Cape Colony for this object ; a very small increase to the garrison and a certain amount of ammunition and food would, judging from what has happened there since the war began, make Kimberley thoroughly secure. If you would let me have a statement of your views on the general situation, to meet me on my arrival at Cape Town, I should be greatly obliged, and also of the strength and disposition of the forces in South Africa, and especially of the capacity and readiness for service of the land transport, on which we mainly depend for a rapid advance into the Transvaal in sufficient strength.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)
(No. 115, cipher.)

Frere Camp, 23rd December, 1899, 4.30 p.m.

The line from De Aar Junction to Modder River appears to me practically safe, *i.e.*, the troops on it are enough to cover it. Walker has been instructed by me to commence a branch line from north of Honeynest Kloof to Jacobsdal, Methuen being strong enough to hold railhead at the River Modder, and to cover the construction of the line. He will cut Cronje's communications at Jacobsdal, and, I expect, frighten him out of Spytfontein, and at the same time will threaten Bloemfontein seriously. Further, when the 6th Division arrives Jacobsdal will form an effective base, and I should propose that the new line be continued to Bloemfontein. This, I think, will not be an expensive line to make, and will be of great strategic advantage ; but as Lord Roberts is to fight this plan of campaign, I think he should, if he has not already started, exercise the right of veto. I am sure that this plan will, even more quickly than a direct attack on Burghersdorp, re-act on Cape Colony and disloyal Dutch.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)
(No. 149, cipher.)

Frere Camp, 9th January, 1900, 11.50 a.m.

From two distinct and separate sources I have been given a statement of the numbers which the State Secretary relied on being able to put into the field, *viz.*, Transvaal, 85,000 ; Orange Free State, 25,000 ; Natal, 5,000 ;

Cape Colony, 30,000 ; total, 145,000. My informants believe that, excepting Orange Free State, which only provided 20,000, and Cape Colony, which up to date has not provided more than 10,000, these numbers have been realised, and there are now in the field at least 120,000 men. There are about 46,000 in Natal and on its borders. So far as I can calculate, the Burghers' lists in Transvaal have been without doubt falsified for years to conceal the numbers. Further, foreign mercenaries to a much larger extent than we were led to expect have been brought into the field.

From the Secretary of State for War to Field-Marshal Lord Roberts.

(Telegram.)

(No. 80, cipher.) War Office, 9th January, 1900.

Please let us know what you think about further reinforcements as soon as you have thoroughly examined the situation. We have arranged for the following reinforcements in addition to the 7th Division, *viz.* :—

1. Four Brigade Divisions, Field Artillery, embarking as soon after the 20th January as possible.
2. One Volunteer company for each Line battalion, amounting in all to about 7,000.
3. The City of London Regiment of Volunteers and the battery of the Honourable Artillery Company.
4. One Field Artillery battery of Volunteers from Elswick.
5. Colonial contingents, inclusive of 4 Artillery batteries, mostly mounted, and amounting in all probably to about 3,000.
6. Seven Militia battalions.

Of these some have already started. As to the Imperial Yeomanry it is not yet possible to say what number will be raised, but 4,000 at least will probably be the total, and the material, though raw, is good. We have also mobilised a Cavalry Brigade which could embark at once ; if, however, it is sent, only the remainder of the Household Cavalry and 5 Line regiments will be left at home. Do you wish to have it ? We are also mobilising the 8th Division, which could begin to embark about the 20th February, but if it goes there will only be 7 Infantry battalions left, and unless the 8th Division is urgently required this reduction of the Home garrison does not appear desirable in view of the general outlook. It might answer your purpose if we sent for the lines of communication 8 or more Militia battalions instead.

From the Secretary of State for War to General Sir Redvers Buller.

(Telegram.)

(No. 81, cipher.) War Office, 10th January, 1900.

Your information as to numbers must, we think, be incorrect, as the total population of both sexes before the war was only 90,000, and at the Presidential election less than 25,000 burghers from 16 upwards voted. The difficulty, however, of the situation is fully recognised by us.

From Field-Marshal Lord Roberts to the Secretary of State for War.

(Telegram.)

(No. 6, cipher.)

Cape Town, 12th January, 1900, 10.45 p.m.

Your No. 80, cipher. My views on the general situation in South Africa are as follows :—Throughout the Colony the feeling of unrest is perhaps not so acute as it was three weeks ago, probably because the enemy seem unable to take advantage of the reverses we then suffered. Of our ultimate success the loyal Colonists are as confident as ever, and the desire for peace in some of the pro-Boer newspapers is pronounced.

Buller's calculation of the numbers of the enemy in the field, is, as far as I can gather from information supplied by the Governor, correct as regards the Cape Colony, Natal, and Orange Free State, *viz.*, 10,000, 5,000, and 20,000 respectively. It seems, however, impossible that

more than 40,000 could have been contributed by the Transvaal. A total of about 75,000 Burghers and Boers would be thus reached, to which any outsiders, who may have joined them, must be added, and putting this number at 5,000, then not more than 80,000 could, at any time, have been opposed to us. It would have been very difficult, if not impossible, to have prevented the Boers at the commencement of the war overrunning the whole country, if the larger numbers stated by Buller had been available, as we had not more than 20,000 to oppose them in all South Africa.

The Cape Colony is the only remaining local recruiting ground from which at least 10,000 more men might be drawn. After consulting the Governor I am, to reassure the people, sending to those districts, to which rebellion is most likely to spread, the whole 6th Division. Yesterday 3 battalions left this place for Port Elizabeth, and will go from there to Naauwpoort by rail. As to reinforcements that may be required, I am a little diffident about giving a definite opinion until matters still further develop, and the result is known of Buller's operation to relieve Ladysmith. I trust that if White and Buller succeed, without very heavy losses, in joining hands, it will not be necessary to send the 8th Division or another brigade of Cavalry. For the lines of communication I shall require 8 Militia battalions in addition to the 7 already detailed, but I should prefer 13 Militia battalions, and, if Lord Cromer agrees, the 2 Highland battalions, which are now in Egypt, 2 of the Militia battalions, to be sent here, taking the places of the latter. I hope, with the Regular Forces already under orders, the 4,000 Imperial Yeomanry, and the Volunteer battalion, and the Colonial details referred to in your telegram, that the force in South Africa will be sufficient, and am most reluctant to request the despatch of more troops from home.

From General Sir Redvers Buller to the Secretary of State for War.

(Telegram.)

(No. 154, cipher.)

Spearman's Camp, 13th January, 1900, 1.55 p.m.

The following is the situation here:—The river looked at from the south forms deep doubles. At the apex of one re-entering bend is Potgieter's Drift. The Boer position lies 6,000 yards off across the two salients, having command of from 200 to 500 feet; the intervening plain is without cover and flat; the enemy's flanks are unassailable; their defences are in two and three lines, the second line being out of sight of the plain with 8 guns. This position I do not think we can force. On the 14th we shall be concentrated here with 10 days' supplies, which I am unable to increase. My force consists of 5 Brigades, less 1 battalion; 42 guns, Field Artillery; 1 howitzer battery; 6 Naval 12-pr., and 2 guns, 4.7-in. I propose that Warren—taking 36 guns, Field Artillery; 3 Brigades, and 1,500 mounted men—shall cross 5 miles to the west at Trichard's Drift; the mountain which forms right flank of enemy's defence will be turned by his advance, while we do the best we can here with 1 Brigade and 3 battalions, howitzer battery and Naval guns. He agrees to this, but as he can only take supplies for 3 days, and will have to march not less than 15 miles from the river, and as he will have difficulty in obtaining water, the operation is undoubtedly risky. But this is the only possible chance for Ladysmith, where supplies running short, and the sick list is already over 2,000.

From Field-Marshal Lord Roberts to the Secretary of State for War.

(Telegram.)

(No. 47, cipher.)

Cape Town, 26th January, 1900, 10.5 a.m.

The reverse in Natal is most unfortunate, especially as I cannot possibly for another 10 days enter the Orange Free State. The collection of carriages is being pushed on with all speed, and, I trust, when I do start, I shall have sufficient to enable the force to strike the railway at Springfontein or thereabouts.

The enemy will be compelled by my being there to evacuate their positions at Burghersdorp and Colesberg. For the construction of temporary bridges at Norval's Pont Bridge and Bethulie Railway Bridge, and also for the rapid reconstruction of the 2 permanent railway bridges, materials are all ready. I trust the move towards Bloemfontein will necessitate the enemy lessening their hold on the Modder River and Natal.

Appendix J.

From the Commander-in-Chief to General Sir Redvers Buller.

(Telegram.)

(No. 97, cipher.)

War Office, 26th January, 1900.

Would it not be feasible, in case you should think it possible that your next endeavour to relieve Ladysmith may not be successful, for White to break out at night with all his mounted men, and as many others as he could carry in carts, together with some of his guns at any rate, and cross the Tugela River? The most likely moment for this endeavour would seem to be when you were engaged on the Tugela River, or immediately after, if you did not have decisive success. I am authorised by the Secretary of State for War to say that the Government is quite prepared to give you every support if you adopt this suggestion; but please understand that no restraint is placed on your entire freedom of decision.

From Field-Marshal Lord Roberts to the Secretary of State for War.

(Telegram.)

(No. 52, cipher.)

Cape Town, 27th January, 1900, 3.10 p.m.

Your No. 98, cipher. The following has been sent to Buller:—

"I should be glad to have the earliest information of the reply you propose to send to Commander-in-Chief. It seems to me that White's action depends entirely upon the time he can hold out; the longer he can do so, the greater my chance of affording help from this side.

"If White could possibly hold out until the end of the month, instead of 15th February named by him as the latest date, I should hope to be able to give him and you material assistance. By the latter date I ought to have relieved Kimberley and be near Bloemfontein.

"The hostile pressure in Natal will probably be relieved by the fact of my threatening Bloemfontein, and thus enable Ladysmith to be relieved even before the end of February.

"It would be a desperate venture for White to break out, and it would be a severe blow to our prestige throughout South Africa, and would in no small degree embarrass our future operations should he abandon the position he has so long defended and the sick and wounded."

From General Sir Redvers Buller to the Commander-in-Chief.

(Telegram.)

(No. 171, cipher.)

Spearman's Camp, 27th January, 1900, 7.5 p.m.

Your No. 97, cipher. Many thanks. It has been one of my great difficulties that White has all along stated that he could help me very little, as when I originally planned his relief I fully expected to be met half way. I fear that it would scarcely be possible for him to break out, and I imagine that his horses, if not eaten, are starved, as he has had to feed his slaughter oxen on their food. Luck is dead against me, this last time cruelly so, but the enemy had 16,000 against me, or not less than the force that I could put into the field.

The fact is that two set battles are required to relieve White. I have always thought I could make a certainty of the first, but have been defeated. I am stopped by the necessity for the second. If, for example, I succeed here and then fail at Roode Poort, I shall be left with a demoralized force, short of water, perhaps 3,000 wounded, and 16 miles from anywhere. Our Officers expose themselves so unnecessarily that one loses them, and then the battalion is thereby demoralized. In a couple of days, however, I shall wire fuller particulars.

Appendix J. *From the Commander in-Chief to General Sir Redvers Buller.*

(Telegram.)
(No. 101, cipher.)

War Office, 27th January, 1900.

It is possible that my telegram of yesterday might be misinterpreted. Please understand that it is not intended to suggest that it is the best course for White to cut his way out. On the contrary, it is only when all the expedients for extricating him have failed that this plan, if practicable at all, should be adopted. The telegram, however, had better be considered as cancelled in view of Lord Roberts' subsequent communication to you.

From Field-Marshal Lord Roberts to the Secretary of State for War.

(Telegram.)
(No. 72, cipher.) Cape Town, 30th January, 1900.

Your No. 99, cipher. Less uneasiness than I had anticipated has arisen in Cape Colony, in consequence of Buller's check on the Tugela. He now proposes a second attempt which will, I trust, succeed. Should it fail, I think it would be inadvisable to reduce the Natal garrison, as we must continue to do our utmost to prevent Ladysmith from falling into enemy's hands. White says that by eating his horses, he can hold out 6 weeks longer, and still have guns efficiently horsed, and about 1,000 mounted troops available; the amount of assistance I can afford, in the event of another failure, must depend on the result of my operations for relief of Kimberley. Instead of leaving to-day, as stated in my No. 53 cipher, I have postponed my departure from Cape Town for about a week. I shall thus be enabled to collect on Modder River a larger force than I at first anticipated. After relieving Kimberley, my movements must depend on the situation as it then presents itself; but should such a plan appear feasible, I should make straight for Bloemfontein.

From Field-Marshal Lord Roberts to the Secretary of State for War.

(Telegram.)
(No. 74, cipher.)

Cape Town, 30th January, 1900, 11.20 p.m.

Following received from Buller, Spearman's Camp, 29th January:—

"For next try to relieve Ladysmith my plan is to cross the Tugela River three times, and using a new drift just discovered, to turn the Spion Kop position by the east. The discovery of this drift makes all the difference by enabling me to reach a position which I had hitherto considered inaccessible. I am only waiting for the Horse Artillery battery from India, and if it arrives, I hope to attack on Wednesday at 4 p.m. without fail. The Ladysmith death-rate is now 8 to 10 a day, and their hospital stores have run out, so delay is objectionable.

"This time I feel fairly confident of success, as I believe the enemy are very disheartened after their severe lesson last week, while we are all right. It is never safe to attempt to prophesy, but so far as my exertions can, humanly speaking, conduce to the desired end, I think I can promise you that I shall in no case compromise my force.

"In reply to your enquiries, when Woodgate was wounded, command on Spion Kop devolved upon Colonel Crofton, Royal Lancaster Regiment. By misinterpreting orders, he was superseded by Colonel Thorneycroft, and the latter ordered the retirement from the hill after night-fall, exercising in my opinion, a wise discretion, under the circumstances."

From Field-Marshal Lord Roberts to the Secretary of State for War.

(Telegram.)
(No. 121, cipher.)

Cape Town, 6th February 1900, 6.30 p.m.

Following received from Buller:—

"I have pierced the enemy's lines after a fight lasting all of yesterday, without many casualties, and I now hold the hill which divides their position, and which will give me access to Ladysmith plain if I can advance. I shall then be 10 miles from White, while the enemy will have only one place beyond to stand. I must, however,

drive back enemy either on my right or left to get my artillery and stores on to the plain. This operation will cost from 2,000 to 3,000 men, and I am hopeful but not confident of success. Do you think the chance of relieving Ladysmith worth the risk, and how would such a loss affect your plans? This is the only possible way of relieving Ladysmith, and I know of no other if I give up this."

The following is my reply to Buller:—

Ladysmith must be relieved even at the loss you expect. I should certainly persevere, and my hope is that enemy will be so severely punished as to enable you to withdraw White's garrison without great difficulty. Let troops know that in their hands is the honour of the Empire, and that of their success I have no possible doubt.

From Field-Marshal Lord Roberts to the Secretary of State for War.

(Telegram.) Head-quarters, Modder,
(No. 136, cipher.) 10th February 1900, 12.55 p.m.

Following received from Buller, from Springfield, 9th February (No. 193, cipher):—

"The operations of the past three weeks have borne in upon me the fact that I had seriously miscalculated the retentive power of the Ladysmith garrison. I now find the enemy can practically neglect that and turn their whole force on me. I am not consequently strong enough to relieve Ladysmith. If you could send me reinforcements, and if White could hold out until they arrive, I think it might be done; but with a single column I believe it to be almost an impossibility. I shall continue attacking it, as it keeps the enemy off Ladysmith, but I think the prospects of success are very small. Can you send me the other half batteries of 5-inch guns. I have two here, and should like the full batteries available."

Following received this morning, dated 9th (No. 195, cipher):—

"It is right you should know that, in my opinion, the fate of Ladysmith is only a question of days, unless I am very considerably reinforced. Where I go the enemy can anticipate me in superior force. I turned yesterday from Vaal Krantz, and am moving towards Colenso; the enemy have left Vaal Krantz and are now at Colenso. They do in six hours and seven miles what takes me three days and 26 miles. When I said that I should try and save Ladysmith the 5th Division had arrived at the Cape, and the 6th and 7th were likely to come and were expected to be at my disposal; but two days after you were appointed, and directed that all troops arriving after that date were to be kept at Cape. I understand from you that you expect to occupy Bloemfontein by end of February, and so relieve the pressure on Ladysmith. I hope the forecast will prove correct, but I cannot help feeling that to relieve Ladysmith as it is for such a chance is a great risk, and it is right I should say so. As for myself, I am doing all I can, and certainly have reason to think that I retain the confidence of all who know my difficulties; but if it is thought anyone else can do better, I would far rather be sacrificed than run the risk of losing Ladysmith. I should like you to forward this to the Secretary of State."

From Field-Marshal Lord Roberts to the Secretary of State for War.

(Telegram.) Modder River,
(No. 141, cipher.) 10th February, 1900, 8.15 p.m.

Following is copy of a telegram I have sent to General Buller:—

"Your cipher telegrams No. 193 and No. 195 of 9th February open out such a large question that it seems necessary to recall what has taken place since my appointment to the chief command in South Africa. My views on the general military situation were communicated to you in my cipher telegrams, No. 1, dated London, 23rd December, and No. 3, dated Madeira, 26th December, in the first of which I pointed out the importance of concentrating all our available forces in Cape Colony, with the object of advancing on Bloemfontein, and in the second informed you that pending the landing in Cape Colony of the 6th Division the *status quo* in Natal did not appear altogether disadvantageous. On my arrival at Cape Town on 10th January, you did not ask for further rein-

forcements. In your telegram No. 157, cipher, dated 15th January, you informed me that you had collected stores more quickly than you had anticipated and were concentrating your troops for an advance, adding that you would probably be unaided as White had told you to expect very little help from him.

"In your cipher telegram, 158, dated 17th January, you repeated a message from White reporting that his force was much played out, and suggesting that you might apply for more troops if you felt any serious doubt of being able to get through to Ladysmith. On this you remarked that you questioned if you could do better with a larger force, the difficulties of supplies on the Tugela river without roads being enormous. You reported your withdrawal from Spion Kop in your cipher telegram No. 169, dated 25th January, to which I replied in my telegram, No. 26, dated 26th January. In this I informed you of my intention to collect sufficient transport and invade the Orange Free State early in February, and I suggested that you should postpone further attempts to relieve Ladysmith until the effect of the operations which I contemplated had become apparent. On 28th January, in your cipher telegram No. 179, you repeated a message of the same date from White in reply to a question from me in which he stated he could hold out for six weeks longer. Even then you did not ask for reinforcements, and as you disregarded my suggestion that you should act on the defensive until I had time to lessen the hostile pressure in Natal by advancing on the Orange Free State, the natural conclusion to be drawn was that you felt yourself strong enough, with the troops at your disposal, to make a further attempt to relieve Ladysmith. As for your remarks about the 6th and 7th Divisions, it is true that had you been holding chief command in South Africa you could have diverted them to Natal, but their original destination was Cape Colony, and, though you knew that I proposed to employ them in that Colony, you did not ask for their services, nor did you leave anything on record showing that you wanted their services. From the foregoing references, it will be seen that by the middle of January you were acquainted with White's position, resources and inability to afford you material assistance, and that on 26th January I gave you specific information of my intentions, which involved the employment in offensive field operations of every soldier in Cape Colony that could be spared from defence duty within the Colony. It will also be seen that, from the date of my assuming chief command until yesterday, I have had no reason to suppose that you considered reinforcements necessary for the relief of Ladysmith. Sending you large reinforcements now would entail the abandonment of the plan of operation, the object of which was explained to you on 27th January, and in the prosecution of which I am convinced lies our best chance of success both in Natal and on the North of Cape Colony. Such a course would involve endless confusion and protracted delay, and as Cape Colony is weakly held, might not improbably lead to a general rising of the disaffected Dutch population. I must therefore request that while maintaining a bold front, you will act strictly on the defensive, until I have time to see whether the operation I am undertaking produces the effect I hope for. The repeated loss of men on the Tugela river without satisfactory result is that which our small army cannot aim at. I will gladly meet your wishes as regards the remaining half batteries of 5-inch guns, but I can do nothing more. Your two telegrams under reply, and my answer to them are being repeated to the Secretary of State for War."

From Field-Marshal Lord Roberts to the Secretary of State for War.

(Telegram.) Modder River, 12th February, 1900.

Following sent to Buller to-day, priority C 93, cipher, 11th February:—

"In continuation of my cipher telegram No. 141 of yesterday, and with reference to your telegram No. 195 of 9th instant, in which you give it as your opinion that fate of Ladysmith is only question of days, unless you are very considerably reinforced, I should like to have the views of your second in command on this question, which is one of such vital importance to our position in South Africa, that it is very necessary I should know whether Sir Charles

Warren shares your views. Show him all your and my Appendix I. telegrams on this subject, also White's telegram of 28th January to me, in which he states he could hold out until middle of March. I wish also to know why, as stated in your telegram No. 169 of 25th January, you considered it necessary to take command of operations which resulted in withdrawal from Spion Kop. Please send very early replies to both these questions."

From Field-Marshal Lord Roberts to the Secretary of State for War.

(Telegram.) Enslin,
(No. 152, cipher.) 14th February, 1900, 7.55 p.m.

Following received from Buller, dated Chieveley, 13th February:—

"I have received following from General Warren:— 'Secret. With reference to Field-Marshal Lord Roberts' question of 11th February, No. C 93, as to whether I share your views expressed in your telegram No. 195 of 9th February, the matter involves an immense number of considerations and investigation of details on which I may or may not share your views, but on the main and important subjects I think that my views closely coincide with yours, as follows:—

"A.—In my estimation the force now in Natal is not sufficiently strong to effectually relieve Ladysmith if the Boers have long-range guns well directed, with good shells, except by getting hold of some position where we are able to get our artillery to pound away at the Boers in their trenches, and then worry and harry till they are tired out.

"B.—I consider that an attack on Bloemfontein and the occupation of the Orange Free State would materially assist in relief of Ladysmith by drawing off the Orange Free State Boers, because, immediately the Orange Free State is declared British territory, the Orange Free State Boers in Natal must either return home or lose their farms.

"C.—I agree with you and General White that it would be fatal to Ladysmith merely to remain on the defensive until operations are carried out in Orange Free State. I consider that the General Officer Commanding, Natal, is bound to continue closely attacking the Boers, even though he should know that he cannot effect relief of Ladysmith, by doing so, arranging, of course, that it may be done with as little loss of life as possible.

"D.—General White first stated that Ladysmith could only hold out to 15th February, but can now hold out to 15th March. This gives us nearly a month more. I consider that 10,000 would be much more effectually employed in Orange Free State and Transvaal in giving assistance to Ladysmith; at the same time I am of opinion that the Natal force is just so weak, without its proper complement of artillery, as to act with difficulty against positions held by the Boers, which are practically forts with fortifications. On the whole, I think that the most effectual arrangement is for the force here, kept up by drafts to full strength, to pound away with their artillery and hang on, and to worry the Boers to the utmost while a rapid advance is made on Bloemfontein, with the object of occupying Harrismith and Van Reenan's Passes, and at the same time for a proclamation to be issued stating that the Orange Free State is British territory, and must call on the Boers to return home or lose their farms.

"E.—You have shown me your proposals as to attacking Hlangwane, near Colenso. I think that this will much assist General White, and that if sufficient long-range guns can be got up, it is possible that the Boers may be worried by artillery until a passage is forced through to Ladysmith; at any rate, it is necessary constantly to pound away to keep the Boers off Ladysmith until they are drawn off by Lord Roberts' advance. The only point I would suggest is that, when a frontal attack is necessary, it should be done, if it is practicable, by sappers, so as to save life; but I have not met with a place in the recent operations where a sapper would be useful, as the Boers dread being killed in anything like equal proportion to our men. There are a considerable number of minor points I should touch on, but these five, A, B, C, D, E, are the most essential."

"My reply will be sent later."

Appendix J *From Field-Marshal Lord Roberts to the Secretary of State for War.*

(Telegram.) Waterval Drift,
(No. 150, cipher.) 14th February, 1900, 8.15 p.m.

Following received from Buller, Chieveley Camp, 12th February :—

"Your résumé of telegrams is quite correct, except that you have omitted your answer of 16th January to mine of 13th and 15th, which you quote. In it you said: 'I am concerned to hear you can expect very little help from White, as that is the sole chance of Ladysmith being relieved.' I took the words 'sole chance' as a definite intimation that I was not to ask for reinforcements, and I should not have done so now had it not been represented to me that I ought to tell you I did not think I was strong enough to save Ladysmith unless reinforced. But pray do not think I wish to lay my troubles on you. I quite admit that I miscalculated the retentive powers of General White's force. I thought he would hold at least 10,000 men off me; I doubt if he keeps 2,000, and I underrated the difficulty of the country. I do not know your plans or where your troops are, and the last thing I wish to do is to involve your plan in confusion. I merely state the facts that I think Ladysmith is in danger, and that I find myself too weak to relieve it; but as you value the safety of Ladysmith, do not tell me to remain on the defensive. To do that means to leave the whole Boer force free to attack Ladysmith. General White has repeatedly telegraphed, 'I trust sickness amongst Boers preventing them throwing their strength on me,' and, again, 'the closer to Ladysmith you can establish yourself the better chance we should have.' I feel sure this is right policy, and I hope you will not say I am to rest supine and leave Ladysmith alone. During the late operations I am confident that the Boer force has been reduced by two men to every one I have lost, and for 3 weeks our operations have practically caused the cessation of the bombardment of Ladysmith. As I have before said, I shall do all I can and rely on it that I will not compromise any force. Perhaps you will repeat this to the Secretary of State also to complete the series."

My telegram quoted was as follows :—

"I am concerned to hear you can expect very little help from White. As that is the sole chance of Ladysmith being relieved, surely he must make an effort to co-operate with Warren as he approaches Ladysmith. It is, I am sure, needless for me to urge importance of there being no

delay on the road; rapidity and quickness of movement is everything against an enemy so skilful in strengthening their defensive positions."

From Field-Marshal Lord Roberts to the Secretary of State for War.

(Telegram.) Waterval Drift, 15th February, 1900.

The following is a repetition of my telegram to General Buller :—

"No. 156, cipher. Your telegrams No. 198 of 12th February and No. 200 of 13th February. My reason for asking you to maintain strictly defensive attitude while still showing bold front was because you informed me that you felt yourself too weak to relieve Ladysmith without reinforcement, and considered its fall merely a question of days. As I am unable to spare reinforcements for Natal, it appears to me to involve useless waste of life for you to again undertake an enterprise which you regarded as hopeless until it could be seen whether my operation in Orange Free State would lessen forces opposed to you and make your task easier. At the same time I have no wish that you should adhere to a passive defence, provided that care is taken to avoid complications which may result in heavy loss of life. Subject to this condition I abundantly agree that the more you can harass the Boers the better. I therefore leave it to you to do what you think best, and rely on your assurance that you will not compromise your force. My force is at present operating in angle of Modder and Riet rivers, and I hope to be able to relieve Kimberley within a few days. My intention then is to march towards Bloemfontein. As regards Warren's telegram, I am glad to find that his views coincide in the main with yours, and also that he agrees with me in thinking that a rapid advance on Bloemfontein will materially assist in relieving Ladysmith by causing many of the inhabitants of Orange Free State to return to their farms. You have not correctly quoted my telegram No. 16, cipher, of 16th January, which runs as follows :—'I am concerned to hear you can expect very little help from White. As this is the sole chance of Ladysmith being relieved, surely he must make an effort to co-operate with Warren as he approaches Ladysmith. It is, I am sure, needless for me to urge the importance of there being no delay on the road; rapidity of movement is everything against an enemy so skilful in strengthening defensive positions.' The words 'sole chance' refer to your operations alone, not to White's help."

APPENDIX K.

Appendix K.

LADYSMITH SIEGE CORRESPONDENCE BETWEEN NOVEMBER 26th, 1899, AND FEBRUARY 28th, 1900, AS 'SUPPLIED BY THE WAR OFFICE TO THE ROYAL COMMISSION.

(See Questions 14688 to 14962.)

! No. 1.

From General Sir G. White to General Clerly.

No. 18 P, 26th November. My supply of hay will only last, at reduced ration, till about 20th December. Other supplies ample, but gun ammunition running low. When you are ready to cross Tugela, I propose to create diversion by fighting towards Onderbrook Hotel. Enemy has entrenched positions commanding this route, and we should attack on same date. What force can you advance with? Give details. May I reckon on 12th or 13th from Colenso or other point on Tugela. Report Buller's movements and situation, Kimberley and Mafeking.

! No. 2.

From General Sir G. White to General Clerly.

No. 19 P, 27th November. Received your No. 5 M, 21st November, and Campbell's, 25th November. Runners report, verbally, successful action, Mooi River and advance to Frere. Best congratulations. Two or three thousand Boers moved past Ladysmith to-day from south, believed returning Orange Free State, part by Drakensberg, part by rail through Transvaal. Propose to try and break gap in investment line through which my mounted troops can harass these movements and shall be glad of your early co-operation. Natives report Commandant, South African Republic, returned here yesterday. To avoid loss Officers should dress like men and carry rifles. Repeat General Buller.

No. 3.

From General Sir R. Buller to General Sir G. White.

Maritzburg, 29th November, No. 47, cipher. I am organising relief force, and only waiting for artillery. Have driven enemy north of Tugela River. Small force at Weenen; they have destroyed bridges at Colenso. Look out at night in two or three days' time for searchlight about Highlands. Methuen is at Modder River, en route for Kimberley, having defeated enemy in three battles, in last of which they were 8,000 strong and entrenched, under command of Cronje. Advertising to affairs in Europe, no chance of intervention. If you hear me attacking, join in if you can. I do not yet know which way I will come. How much longer could you hold out?

No. 4.

From General Sir G. White to General Sir R. Buller.

No. 20 P, 30th November. Flashing signals clouds seen last night for first time. Following portion only read:—"I do not yet know which way I will come. How much longer could you hold out? From Maritzburg. from Buller." Commencement of message and date not read. Situation here unchanged; but enemy still mounting additional guns against some of our essential positions. I have provisions for 70 days, and believe I can defend Ladysmith while they last. Hay or grazing is a difficulty; I have 35 days' supply of this at reduced ration. Small-arm ammunition, 5½ million; 15-pr. guns, 250 rounds per gun; 4.7-inch naval guns, 170 rounds per gun; 12-pr. naval guns, 270 rounds per gun; 6.3 inch howitzer, 430 rounds per gun. Enemy learns every plan of operations I form, and I cannot discover source. I have locked up or banished every suspect, but still have undoubted evidence of betrayal. Native deserters from enemy and our native scouts report enemy much disheartened by news of advance on Free State, victory

on Mooi River, and consequent retirement north of Tugela River. With regard to road of advance towards Ladysmith, I could give most help to a force coming via Onderbrook Hotel or Springfield, but enemy is making his positions on that side stronger daily. If force south of Tugela can effect junction with me, I believe effect will be immediate and decisive. At present cannot go large as I am completely invested, and must reserve myself for one or two big efforts to co-operate with relief force. It will be the greatest help to Ladysmith if relief force maintains closest possible touch with enemy. Hospital return—wounded, 225; dysentery, 71; enteric, 15; other fevers, 12; other diseases, 109. Additional portion of message deciphered—"If you hear me attacking join in if you can." Please repeat entire message. I will keep a good look out and do all I can. Repeat General Clerly.

No. 5.

From General Clerly, Frere, to General Sir G. White.

3rd December. Your questions by heliograph to Weenen received, and yours by runner to-day. The bulk of my troops are here and I hope will be able to move about 11th. Demoralised Boers were seen to have retreated north of Tugela River. Buller is still at Maritzburg. There has not been much fighting on this side yet. Hildyard made a night attack on the Boers south of Estcourt on 22nd and 23rd, and drove them out of their positions. The next day they commenced retreating. Kimberley and Mafeking are still all right, former probably practically relieved by now. Lord Methuen was slightly wounded at Modder River, but has returned to duty. The German Emperor has been well received in England, where present war creates greatest enthusiasm. Will inform you as to my exact plans later. We are using flashing signals nightly.

No. 6.

From General Sir R. Buller to General Sir G. White.

No. 58, 4th December. Your No. 20 P,* 30th November, received. I shall have concentrated four brigades of Infantry, five batteries of Artillery, one regiment of Cavalry, 1,000 mounted Volunteers, by 6th December, and shall attack. I cannot yet say which route, but will communicate with you in several cipher messages before I advance. I shall also send by searchlight messages in clear, but they will be false ones sent in order to deceive enemy.

No. 7.

Received without address, signature, or date, by runner, on 6th December.

No. H 59, cipher. The despatch to Natal of Cavalry and Artillery has been somewhat delayed; but I still hope to commence my general advance, 12th December, possibly sooner. Will try to let you know again. Sir Redvers Buller is now at Maritzburg. Very anxious to know strength and position of Boer force north of Colenso.

No. 8.

From General Clerly to General Sir G. White.

No. H 63, 5th December, Highlands. Buller says he will send you all sorts of messages by heliograph and flashing signals, in clear; but you are not to believe them. You are only to believe messages sent in cipher or in Lindustani.

* No. 4.

Appendix K.

No. 9.

From General Sir G. White to General Sir R. Buller.

No. 21 P, 6th December. Have strong evidence that Orange Free State Boers are proceeding in large numbers to Orange Free State, both *via* Drakensberg and by rail through Transvaal. My Cavalry is now shut in, and as regards arrival relieving force, it is too early for me to take and occupy more extended positions so as to free mounted troops to harass Free State withdrawal. Perhaps you can hurry advance, or if you think it necessary, I will try to harass Free State Boers at once. I believe large portion of enemy's force now faces Tugela.

No. 10.

From General Sir G. White to General Clerly.

No. 21 P, 7th December. Your No. H 63,* 5th December, received. Do not use Hindustani for true messages. Boers would have no difficulty in getting them translated. Inform Buller.

No. 11.

From General Sir R. Buller to General Sir G. White.

No. 65, 7th December. I have decided to advance by Potgieter's Drift. Expect to start 12th December and take five days.

No. 12.

From General Sir G. White to General Sir R. Buller.

No. 24 P, 8th December. This morning I made a demonstration with Cavalry to the north and east to draw enemy back from Tugela direction. Cavalry could not get far as enemy still in force to north and east. About 20 casualties.

No. 13.

From General Sir G. White to General Sir R. Buller

No. 23 P, 8th December. Last night I sent out General Hunter with 500 Natal Volunteers under Royston, and 100 Imperial Light Horse under Edwards, to surprise Gun Hill. The enterprise was admirably carried out and was entirely successful, the hill being captured and a 6-inch gun and a 4.7-inch howitzer destroyed with guncotton by Captain Fowke and Lieutenant Turner, Royal Engineers, while a Maxim was captured and brought into camp. Our loss—one killed; Major Henderson, Argyll and Sutherland Highlanders, and two men, slightly wounded. At the same time Colonel Knox seized Limit Hill, and one squadron 19th Hussars rode round Pepworth Hill, burning kraals and cutting Boer telegraph line. No casualties.

No. 14.

From General Sir G. White to General Sir R. Buller.

No. 25 P, 8th December. Captain Heath reported yesterday from balloon that very large laager of enemy, consisting of about 300 tents, is on this side Tugela in neighbourhood of Potgieter's Drift. Boers usually yield to heavy shelling.

No. 15.

From General Sir G. White to General Sir R. Buller.

No. 26 P, 8th December. Your message No. 65,† 7th December. I cannot make sense of eight groups which come between 66130 and 00852, although I have had them several times repeated. Please have ciphering checked and heliograph this part of message again.

No. 16.

From General Sir R. Buller to General Sir G. White.

No. 69, 9th December. The balloon was correct, but they have not enough men at Potgieter's to stop me. I am only waiting for wagons, which I am impressing. I still hope to start on 12th, and arrive near Lancer's Kop on 17th, but may be a day or two later, though I hope not. If I have hard fighting near Ladysmith I shall

look to you to feed my force for perhaps two days. I can only take three days' supplies across Tugela River, but that should be enough.

No. 17.

From General Sir G. White to General Sir R. Buller.

No. 27 P, 10th December. Your No. 65‡ of 7th December received and understood. Am I right in supposing you will force crossing of Potgieter's Drift morning 15th? If so, I will move out night 14th–15th, and work towards you as far as I can. As time is all-important factor in co-operation, you will, I am sure, inform me of any change.

No. 18.

From General Sir G. White to General Sir R. Buller.

No. 28 P, 11th December. Last night Lieut.-Colonel Metcalfe, 2nd Bn. Rifle Brigade, with 500 men of his battalion, made a sortie to capture Surprise Hill, and destroy the 4.7-inch howitzer mounted there. They reached the crest of the hill undiscovered, and drove off the enemy, the gun being destroyed with guncotton successfully by Digby Jones, R.E. When returning they found their retirement barred by Boers, but forced their way through, using the bayonet freely. Boer losses considerable. Our losses are: 2nd Bn. Rifle Brigade, killed—Lieutenant Fergusson and 10 rank and file; wounded—Captain Paley, Second Lieutenant Davenport, Second Lieutenant Bond, 40 rank and file. Six men, 2nd Bn. Rifle Brigade, who remained behind in charge of wounded, were taken prisoners. Royal Engineers, rank and file, one killed, one wounded.

No. 19.

From General Sir R. Buller to General Sir G. White.

Clear line. No. 72, cipher, 11th December. Your No. 27 P.§ I sent Barton's Brigade and six naval guns this evening to a point beyond Chieveley, whence during next two days they will bombard defences of Colenso. I propose to march with three brigades, two regiments of Cavalry, 1,000 Volunteers, five batteries Field Artillery, and six naval guns, to Springfield on night of 13th, force the passage of Potgieter's a.m. 15th, advance to water near Dewdrop 16th, attack Lancer's Hill 17th. But my actual movement depends on arrival of impressed transport. I may be disappointed, so cannot fix dates accurately without risking undue delay. Consequently, I think you had better not look forward to helping me before my attack on Lancer's Hill, unless you feel certain of where I am. Heavy rain before 15th may also delay me.

No. 20.

From General Sir G. White to General Sir R. Buller.

Clear line. No. 29 P, 12th December. Your No. 72, 11th December, received and understood. Shall look out for heliograph on hills south of Potgieter's, and act according to circumstances.

No. 21.

From General Clerly to Sir G. White.

No. 65 H, 11th December. We think it possible that the Boers have flashing signals, and may use it to interfere and confuse our messages.

No. 22.

From General Sir R. Buller to General Sir G. White.

No. 78, cipher, 13th December. I have been forced to change my plans. Am coming through *via* Colenso and Onderbrook Spruit.

No. 23.

From General Sir G. White to General Sir R. Buller.

No. 30 P, 13th December. Your No. 78¶ of to-day received and understood. Shall be very glad if you will let me know your probable dates.

* No. 8.

‡ No. 19.

† No. 11.

‡ No. 11.

¶ No. 22.

§ No. 17.

No. 24.

From General Sir G. White to General Clerly.

No. 31 P, 13th December. Your No. H 65* of 11th. Boers use searchlight to hinder cloud signals, but not successfully.

No. 25.

From General Sir R. Buller to General Sir G. White.

No. 83, 13th December. Three brigades concentrate at Chieveley to-day. Fourth brigade go there to-morrow. Actual date of attack depends on difficulties met with; probably 17th December.

No. 26.

From General Sir R. Buller to General Sir G. White.

Clear line. No. 88, 16th December. I tried Colenso yesterday, but failed; the enemy is too strong for my force, except with siege operations, and those will take one full month to prepare. Can you last so long? If not, how many days can you give me in which to take up defensive position? After which I suggest you firing away as much ammunition as you can, and making best terms you can. I can remain here if you have alternative suggestion, but unaided I cannot break in. I find my Infantry cannot fight more than 10 miles from camp, and then only if water can be got, and it is scarce here.

[NOTE.—In his No. 92 of 17th, Buller said above message had been signalled correctly, but asked us to make following corrections:—Strike out from “if not, how many” down to “after which” inclusive, and substitute “how many days can you hold out?” Add to end of message, “whatever happens, recollect to burn your cipher, decipher, and code books, and all deciphered messages.”]

No. 27.

From General Sir G. White to General Sir R. Buller.

No. 32, 16th December. Your No. 88† of to-day received and understood. My suggestion is that you take up strongest available position that will enable you to keep touch of the enemy and harass him constantly with Artillery fire, and in other ways as much as possible. I can make food last for much longer than a month, and will not think of making terms till I am forced to. You may have hit enemy harder than you think. All our native spies report that your Artillery fire made considerable impression on enemy. Have your losses been very heavy? If you lose touch of enemy, it will immensely increase his opportunities of crushing me, and have worse effect elsewhere. While you are in touch with him and in communication with me he has both of our forces to reckon with. Make every effort to get reinforcements as early as possible, including India, and enlist every man in both Colonies who will serve and can ride. Things may look brighter. The loss of 12,000 men here would be a heavy blow to England. We must not yet think of it. I fear I could not cut my way to you. Enteric fever is increasing alarmingly here. There are now 180 cases, all within the last month. Answer fully. I am keeping everything secret for the present till I know your plans.

No. 28.

From General Sir R. Buller to General Sir G. White.

Clear line. No. 93, 17th December. I find I cannot take Colenso, and I cannot stay in force near there, as there is no water, but I am leaving there as large a force as I can to help you; but recollect that in this weather my Infantry cannot be depended on to march more than 10 miles a day. Can you suggest anything for me to do? I think in about three weeks from now I could take Colenso, but I can never get to Onderbroek.

No. 29.

From General Sir G. White to General Sir R. Buller.

Clear line. No. 33 P, 18th December. Your No. 93, 17th December, received and understood. It is difficult

for me to make suggestions, as I do not know situation outside, or whether you have made serious attempt to take Colenso, and with what loss. Your messages were previously confident, and I had made preparations to fight towards Onderbroek, and could still do so if you had Colenso. I cannot advise leaving small force in advance of main body. It would probably be invested and be no real threat to enemy. Your front line should be held in full strength. Abandonment of this garrison seems to me most disastrous alternative on public grounds. Enemy will be doubly strong on Tugela if Ladysmith falls. I can only suggest getting every available reinforcement in men and guns and attacking again in full force as early as possible. Meantime I will do all I can to maintain an active defence, and will co-operate with you to the extent of my power if you advance again. How are you getting on in the Free State? We know nothing. Detailed news desirable to contradict mischievous rumours here.

No. 30.

From General Sir R. Buller to General Sir G. White.

Dated Head-quarters, Frere, No. 97, 17th December. 6th Division just arrived at the Cape; have telegraphed for it to come on at once. It will make me strong enough to try Potgieter's. How long can you hold out?

No. 31.

From General Sir G. White to General Sir R. Buller.

Clear line. No. 34 P, 18th December. Your No. 97‡ of yesterday received and understood. Delighted to get it. I have provisions for men for six weeks, and have confidence in holding this place for that time; but bombardment may become more trying. I had 22 casualties this morning from one shell. Enteric and dysentery increasing very rapidly. I can get on well for three weeks, keeping even horses moderately fit, if you wish to wait for siege train. It is worth waiting a little to dominate and overwhelm enemy's guns. Bring every heavy gun, naval and other, you can get. Water will be a difficulty as regards occupying a position near Tugela River, from which you can maintain continuous attack. Could you arrange pipes, pumping station, or reservoirs?

No. 32.

From General Sir G. White to General Sir R. Buller.

No. 35 P, 18th December. Following from Lambton, R.N., to Officer Commanding, Naval Brigade:—“At long ranges I consider common and lyddite shell much preferable to shrapnel for clearing entrenchments.”

No. 33.

From General Sir R. Buller to General Sir G. White.

No. 98, 18th December. Your No. 32 P§ of yesterday received. My No. 97|| of yesterday gives situation. I am shelling Colenso and keeping all troops I can at Chieveley, but water is scarce. Boil all your water; we hear Boers are putting dead horses in Klip River. I will tell you immediately I know when Warren is coming.

No. 34.

From General Sir G. White to General Sir R. Buller.

No. 36 P, 19th December. All our scouts report marked diminution in usual number of Boer horses round here to-day. This may mean movement in strength towards you.

No. 35.

From General Sir R. Buller to General Sir G. White.

No. 109, 19th December. I was confident of taking Colenso, and think I ought to have done it had not my guns gone in to within 1,200 yards of Fort Wylie, where they were put out of action, and I only extricated two guns out of 12. I lost about 1,000 all told. Heard enemy lost 600 to 800, but I cannot say. Methuen defeated Boers at Belmont, at Graspan, and at Modder

§ No. 27.

† No. 26.

|| No. 30.

‡ No. 30.

Appendix K. River. He again attacked them at Speyfontein, but failed to get home. He is now encamped at Modder River in front of Cronje, who has about 15,000 men very strongly entrenched. The 5th Division is just arriving, and the 6th and 7th Divisions are embarking in England. Dutch in Cape Colony are giving a good deal of trouble. That, I think, is about all the news.

No. 36.

From General Sir R. Buller to General Sir G. White.

No. 112, 21st December. Your message, 19th December, received. I expect that reinforcements will be concentrated here by 5th January.

No. 37.

From General Sir R. Buller to General Sir G. White.

No. 113, 22nd December. A man named Carl Christian Pietersen, believed to be serving in Natal Mounted Rifles in Ladysmith, is believed to be in secret service of enemy.

No. 38.

From General Sir G. White to General Sir R. Buller.

No. 37 P, 23rd December. Previous history of man referred to in your No. 113* of 22nd well known. He has been closely watched in camp and field. Appears thoroughly loyal and very forward under fire. Have you any evidence against him?

No. 39.

From General Sir R. Buller to General Sir G. White.

No. 0259, code. Your No. 37 P.† There is no evidence against the man referred to.

No. 40.

From General Sir R. Buller to General Sir G. White.

No. 131, 30th December, Frere. My intention is to start from here 6th January, by which time I hope the 5th Division will have arrived. My point of attack will be Lancer's Kop. It will take me about six days to get there from the date I start from here. I will inform you later of my exact date of departure from here, and will endeavour to keep you informed of my movements, but my telegraph line may be cut.

No. 41.

From General Sir G. White to General Sir R. Buller.

No. 38 P, 1st January. Your No. 131,‡ 30th December, received to-day. If you will trust me with further details of your plan, I hope to be able to assist you in the later stages of your advance on Ladysmith; but to do this effectually I should require to know on which line or lines you intend to force passage of Tugela.

No. 42.

From General Sir R. Buller to General Sir G. White.

No. 133, 2nd January. Your No. 38 P,§ 1st January. See my No. 97, 17th December. I adhere to the plan therein referred to of crossing Tugela River at Potgieter's. I expect a stiff fight when crossing the river, possibly a fight at the place I camp, between river and Lancer's Kop, and another fight there. If you can recommend me any better point to attack than Lancer's Kop, please do so. As troops are not arriving up to time, I doubt if I can start until the 8th January. I calculate it will take me seven days to reach Lancer's Kop.

No. 43.

From General Sir G. White to General Sir R. Buller.

No. 39 P, 2nd January. Your No. 133|| of to-day. As you intend crossing Tugela River at Potgieter's, Lancer's Hill becomes an essential point on your line of advance. If you can keep me informed of your progress,

I can help you by attacking Lancer's Hill from north, when you attack it from south-west. Communication by signalling from hill above Potgieter's should be easy. Do not hurry on date of starting on our account if recently arrived troops need rest, as I am quite confident of holding my own here.

No. 44.

From General Sir G. White to General Sir R. Buller.

No. 40 P, 3rd January. I have offers from two railway employés to attempt blowing up railway bridges at Sunday's River and Waschbank. Reward, £2,000 in each case if successful, but nothing to be paid for unsuccessful attempt. Would you like this tried?

[NOTE.—On 6th January, about 7 a.m., a telegram was sent to General Buller, informing him that we were being attacked. It was not numbered, and no copy was kept. See No. 2285, General Block.]

No. 45.

From General Sir G. White to General Sir R. Buller.

No. 41 P, 6th January, 9.30 a.m. Attack continues, and enemy been reinforced from south. All my reserves are in action. I think enemy must have weakened his force in front of you.

No. 46.

From General Sir G. White to General Sir R. Buller.

No. 42 P, 6th January, 12.45 p.m. We now have definite information that considerable numbers of enemy left Colenso yesterday, intending to take Ladysmith before fighting you. Have beaten them off at present, but they are still round me in great numbers, especially to south, and I think renewed attack very probable.

No. 47.

From General Sir G. White to General Sir R. Buller.

No. 43 P, 6th January, 3.15 p.m. Attack renewed. Very hard pressed.

No. 48.

From General Sir R. Buller to General Sir G. White.

No. 135, 5th January. Your No. 40 P,¶ 3rd January. I have already had Waschbank Railway Bridge blown up. Hear it has been restored, probably with trestles. It is only worth while to make another attempt at moment we seem likely to join hands. If it could be done at that moment thoroughly, to either bridge, I would pay the sum asked for; but I think it too much.

No. 49.

From General Sir G. White to General Sir R. Buller.

No. 43 P, 7th January. Yesterday morning, 2.45 a.m., an attack was commenced on my position, but chiefly against Caesar's Camp and Wagon Hill. The enemy were in great strength, and pushed their attack with the greatest courage and persistency. Some of our entrenchments on Wagon Hill were three times taken by the enemy and retaken by us. The attack continued till 7.30 p.m. One point within our position was occupied by the enemy the whole day. In a very heavy storm of rain at dusk the enemy were turned out of this position at the point of the bayonet, in the most gallant manner by the Devonshire Regiment, led by Major Park. Colonel Ian Hamilton commanded at Wagon Hill, and rendered invaluable service. The troops have had a very trying time, behaved excellently, and are elated at the service they have rendered to the Queen. The enemy were repulsed everywhere with heavy loss, which greatly exceeds our own. Details will be sent as soon as lists are completed.

¶ No. 44.

§ No. 41.

No. 50.

From General Sir G. White to General Sir R. Buller.

No. 44 P, 7th January. Our losses yesterday heavy. Officers killed, 14; wounded, 23. Men killed, about 100; wounded, about 230. Nominal list later. Most of the wounds were in the head. Troops here much played out, and a very large proportion of my Officers have, up to date, been killed or wounded, or are sick. I would rather not call upon them to move out from Ladysmith to co-operate with you; but I am confident enemy have been very severely hit. Please do not allow our losses to be published in local papers, as they thus reach and encourage the enemy.

No. 51.

From General Sir R. Buller to General Sir G. White.

No. 136, 5th January. Your No. 39 P,* 2nd January. I shall certainly try and communicate with you, and am taking limelight for that reason. I expect to start night of 9th-10th, and to have a fight to cross the river about the 15th. The enemy have entrenched themselves, but the position is not naturally as strong as at Colenso. Do you wish me to leave a signaller at Weenen when I start? It would be more convenient to remove him.

No. 52.

From General Sir G. White to General Sir R. Buller.

No. 45 P, 8th January. Your No. 136,† 5th January. Of course you must decide; but uninterrupted communication would be double value to me while you are en route for here.

No. 53.

From General Sir R. Buller to General Sir G. White.

No. 144, 8th January. After stating that his No. 139, which we could not decipher, referred to operations of 6th January, and might now be cancelled, and after making one or two unimportant corrections in his No. 136,‡ 5th January, goes on as follows:—"I start from here to-morrow and expect it will be six or seven days from then before I shall be able to leave Potgieter's, but I may be quicker. I shall try to keep up signal communication with you and I am taking a balloon which I hope you will see."

No. 54.

From General Sir R. Buller to General Sir G. White.

8th January. Following received from Secretary of State for War:—"No. 78, 6th January. Reported here that a Dr. Brennan, Johannesburg, now in Ladysmith, may be supplying Boers with information. Suggest report be communicated to White if possible."

No. 55.

From General Sir R. Buller to General Sir G. White.

No. 145, 8th January. Sorry to hear of your severe list of casualties. Congratulate all the men, and say we shall strain every nerve to be with them soon.

No. 56.

From General Sir R. Buller to General Sir G. White.

No. 148, 8th January. Your No. 45 P.§ Signal station will be left at Weenen, but keep a good look out for signals to westward on the 11th and afterwards.

No. 57.

From General Sir R. Buller to General Sir G. White.

No. 157, 8th January. There is an idea here that the enemy may attack you again shortly, and at night. We commence to move to-morrow, Tuesday, night.

No. 58.

From Her Majesty the Queen to General Sir G. White.

Warmly congratulate you and all under your command for your brilliant success. Greatly admire conduct of the Devonshire Regiment.

No. 59.

From General Sir G. White to General Sir R. Buller.

No. 46 P, 10th January. Your reassuring telegram No. 145,|| 8th January, much appreciated by troops. My sick list now amounts to 2,000, including 615 cases of typhoid.

No. 60.

From General Sir G. White to Private Secretary to Her Majesty the Queen.

10th January. The garrison of Ladysmith are deeply grateful for the Queen's most gracious message, and beg to express their loyal duty.

No. 61.

From General Sir G. White to Governor, Natal.

10th January. I thank you for your appreciative telegram. It has gratified the garrison of Ladysmith much, and they are rejoiced to think they have rendered good service to Natal, a province that has shown such devotion to Imperial interests, and given this garrison so splendid a contingent with whom it is an honour to fight as comrades.

No. 62.

From General Sir R. Buller to General Sir G. White.

No. 156, 14th January. I find the enemy's position covering Potgieter's Drift so strong that I shall have to turn it, and I expect it will be four or five days from now before I shall be able to advance towards Ladysmith. I shall keep you constantly informed on my progress.

No. 63.

From General Sir G. White to General Sir R. Buller.

No. 47 P, 15th January. Your No. 156¶ of yesterday just received. I can wait. Wish you best of luck.

No. 64.

From General Sir G. White to General Sir R. Buller.

No. 48 P, 16th January, reference your No. 156**, 14th January. If you have considerable doubt of being able to get through to Ladysmith, would you put case to Roberts, and ask more troops. If you are repulsed now, Ladysmith will be in a bad way. If you are undefeated and ready to attack on any withdrawal of enemy's strength from your front, I think I could maintain this place till 15th February; but the sick would suffer badly. My force is much played out. I have 2,400 in hospital, and many very weakly men at duty. Sickness increasing daily. I have lost services of 230 officers in last three months, including killed, still non-effective from wounds, prisoners, and sick.

No. 65.

From General Sir R. Buller to General Sir G. White.

No. 159 of 17th January. Your No. 48 P,++ 16th January. I crossed one bridge at Potgieter's to-day, and am bombarding their positions. Warren, with three brigades and six batteries, has crossed by pontoon bridge at Trichard's Drift, and will move to the north to try and outflank Boer position. I somehow think we are going to be successful this time. We could not get reinforced in time to relieve you if we waited. Every man in this force is doing his level best to relieve you. It is quite pleasant to see how keen the men are. I hope to be knocking at Lancer's Hill in six days from now.

Appendix K.

No. 66.

From General Sir R. Buller to General Sir G. White.

No. 161, without date, received 19th January. Following from Secretary of State for War :—"Doctor Dyson Vaz said to have reached Ladysmith, 2nd December. Corresponds with Boer Agent at Lisbon. If traced should be watched."

No. 67.

From General Sir R. Buller to General Sir G. White.

No. 0354, code, 19th January. Following message received from General Warren last night :—"Colonel Lord Dundonald, with about 1,200 mounted troops, came into action this afternoon with a force of Boers to the west of Acton Homes. At 7 p.m. I reinforced him with 300 1st Royal Dragoons. He has occupied the kopjes after a fight, and is now holding the position. Field-Cornet Heilbron, 20 Boers killed and wounded, 15 prisoners. Lieutenant Shaw, Imperial Light Horse, severely wounded; two privates, King's Royal Rifle Corps, killed; and one Private, Imperial Light Horse, wounded."

No. 68.

From General Sir G. White to General Sir R. Buller.

No. 49, 19th January. Your No. 159* and No. 161.† Congratulate you and ourselves on your successful progress, and have greatest confidence in seeing you soon.

No. 69.

From General Sir R. Buller to Sir General G. White.

No. 0352, code, 15th January. Have you formed any estimate of the enemy's losses on 6th January. If so, please inform me.

No. 70.

From General Sir G. White to General Sir R. Buller.

15th January. I returned bodies of 79 dead, killed within my position. Of course this cannot include all dead, but I have no means of verifying their losses and dislike making estimates based on uncertain details. Native reports place Boer loss at 500 to 600 killed and wounded.

No. 71.

From General Sir G. White to General Sir R. Buller.

19th January. A force of 1,500 to 2,000 Boers moved from Clydesdale towards Acton Homes, 5 p.m. to-day, by main road.

No. 72.

From General Sir R. Buller to General Sir G. White.

No. 162, 20th January. Thanks for telegram respecting observations, movements of enemy. Can you see when enemy relieves garrison of trenches east of Spion Kop? The trenches are nearly always full of men, but we cannot see enemy go in or come out of them. Warren is meeting with great difficulties regarding roads, and his progress is very slow. I am sending him three more days' supplies.

No. 73.

From General Sir G. White to General Sir R. Buller.

20th January. Your No. 162‡ of to-day. Relief of trenches east of Spion Kop not been seen from here. Will watch and report if relief observed.

No. 74.

From General Sir G. White to General Sir R. Buller.

No. 51 P, 21st January. If you can let me know when you intend decisive attack on Boer position, I will demonstrate here to draw as many as possible away from you. Experience leads me to think I can draw away a considerable number.

No. 75.

From General Sir R. Buller to General Sir G. White.

No. 166, 21st January. Your No. 51 P, 21st January. We are slowly fighting our way up the hill. I will let you know when help from you will be of most assistance. Reports received from all prisoners put the number of enemy in front of me at 10,000, and the number surrounding you at 5,000. I do not know if this is correct.

No. 76.

From General Sir G. White to General Sir R. Buller.

No. 52 P, 22nd January. Your No. 166,|| 21st January. I think 15,000 is too low an estimate of enemy's numbers round Ladysmith and facing Tugela. You are probably right about Ladysmith, but I believe there are more than 10,000 facing you, or in position to face you rapidly. Deserters report a movement on Saturday of detach'd force towards the Drakensberg to try and turn the left flank.

No. 77.

From General Sir G. White to General Sir R. Buller.

No. 53 P, 22nd January. Considerable activity in Boer camps to-day. Towards sunset about 500 Boers from here reinforced main Boer camp near Clydesdale. Shall open Artillery fire at daybreak to call them back.

No. 78.

From General Sir R. Buller to General Sir G. White.

No. 167, 23rd January. Warren holds the position he gained two days ago. In front of him at about 1,400 yards is the enemy's position west of Spion Kop. It is on higher ground than Warren's position, so it is impossible to see into it properly; it can only be approached over bare open slopes. The ridges, held by Warren, are so steep that guns cannot be placed on them, but we are shelling the enemy's position with howitzer and Field Artillery placed on the lower features behind the Infantry, enemy reply with Creusot and other artillery. In this duel the advantage rests with us, as we appear to be searching his trenches and his artillery fire is not causing us much loss. An attempt will be made to-morrow to seize Spion Kop, the salient which forms the left of the enemy's position facing Trichard's Drift, and (it must be done) from the position facing Potgieter's, it has considerable command over all the enemy's entrenchments.

No. 79.

From General Sir G. White to General Sir R. Buller.

No. 54 P, 24th January. Many thanks for efforts you are making. We await news of result with utmost anxiety.

No. 80.

From General Sir R. Buller to General Sir G. White.

No. 170, 25th January. Warren took Spion Kop the 24th and held it all day, but suffered very heavily: General Woodgate dangerously wounded, 200 killed and 300 badly wounded, and his garrison abandoned it in great disorder at night. I am withdrawing to Potgieter's, and mean to have one fair square try to get with you, but my force is not strong enough I fear. I shall send particulars to-morrow.

No. 81.

From General Sir G. White to General Sir R. Buller.

No. 55 P., 27th January. Your No. 170** of 25th only received to-day. We must expect to lose heavily in this campaign, and be prepared to face it. If you try again and fail, Ladysmith is doomed. Is not 7th Division available to reinforce you? I could feed the men another month, but not all the horses, and without guns my force could do nothing outside. My medical supplies are nearly out, and the mortality is 8 to 10 daily already. I put it to you and the Government whether I ought not to abandon Ladysmith and try to join you. I could, I think, throw 7,000 men and 36 guns into the fight. If

* No. 65.

No. 75.

† No. 66

‡ (Divide it?)

§ No. 72.

** No. 80.

§ No. 74.

you would commence preparing an attack and draw off the enemy, say in the afternoon of a day to be settled between us, I would attack that night, and do my best to join you. The attack from here ought to have great effect, but I fear my men are weak, and in some instances morally played out. The fall of Ladysmith would have a terrible effect, especially in India. I am deeply impressed with the gravity of the situation, and trust you will repeat this to the highest authorities. Deserters report Boers lost severely on 24th, and were quite disheartened by your Artillery fire. If we stick to them we may effect a junction but my proposal is a desperate one, and involves abandoning my sick and wounded, Naval guns, and railway rolling stock. I could not keep the field more than two or three days. I would hold on to the last here if political considerations demand it, or if there is a prospect of sufficient reinforcement to relieve us.

No. 82.

From General Sir R. Buller to General Sir G. White.

No. 173, 28th January. We had awful luck on the 24th; I had got two Naval guns and a Mounted Battery half-way up Spion Kop when the troops came down. If we had had the luck out of all the Colonels up there to have found a really good fighting man, we should have been in Ladysmith in four days. As it is, we are no better off, and some regiments here have had a severe shake. On the other hand, the Boers themselves admit very heavy casualties, and that they are tired out. We have held them in their trenches at a distance of from 1,000 to 1,400 yards for a week, and our Artillery fire has been very good. We have lost, say, 1,400. I cannot think their casualties less than 1,000. The question is can I get within a day's fight of you? At the present time they have the position at Potgieter's. I think I can certainly take that, but it will leave them on my left in the Acton Homes—Spion Kop position. They may not remain there, but if they do, I doubt if I can get forward to the Roodeport position, which is, I hear, heavily entrenched. I propose about Wednesday to attack Potgieter's. If I get through I shall be able to arrange with you for a simultaneous attack, you on Lancer's Hill, and me on Roodeport, and that I think offers the best chance of success. Believe me, I will leave nothing untried.

Your No. 55 P,* received since above was written. I agree with you that breaking out is only a final desperate resort. I shall try to force this position, and then we shall see. Some old Boers, who were very civil to our doctors on Spion Kop, told them that there were 16,000 of them in front of us, and not more than 4,000 left at Ladysmith. I have no means of knowing how true this is, but deserters say that most of the men are here. Lord Roberts says he cannot reinforce me, but that if you will wait till end of February, he will by then be in Bloemfontein, and will have relieved Kimberley, which will, he says, reduce the pressure on Ladysmith. I doubt Roberts's forecasts coming off, and think I had better play my hand alone, and as soon as I can. What do you think?

No. 83.

From General Sir R. Buller to General Sir G. White.

No. 174, 28th January. Following telegram just received for you from Lord Roberts:—"Please communicate following to White:—"I beg you will yourself accept and offer all those serving under command my warmest congratulations on heroic, splendid defence you have made. It is a matter of the deepest regret to me that the relief of Ladysmith should be delayed, but I trust you will be able to hold out later than the date named in your recent message to Buller. I fear your sick and wounded must suffer, but you will realize how important it is that Ladysmith should not fall into the enemy's hands. I am doing all that is possible to hurry on my movement, and shall be greatly disappointed if, by the end of February, I have not been able to carry out such operations as will compel the enemy to materially reduce his strength in Natal."

No. 84.

From General Sir G. White to General Sir R. Buller.

No. 56 P, 28th January. Thanks for your No. 173† of to-day. It is most provoking about losing Spion Kop. I think it would be better if you stick to bombardment, and slow progress by something like sap rather than commit yourself to another definite attack. Information, which I believe correct, says Boers are discouraged by superiority of your armament, and say they cannot stand it. Keep them, therefore, in their trenches and bombard them as heavily as you can. I don't think they will stand it long. I trust to your preventing them from throwing their strength on me. I will hold on six weeks more by sacrificing many of my horses, and that period of bombardment, coupled with Roberts's advance, will make Orange Free State men at all events clear off. I believe your estimate of enemy's numbers here and before you may be about correct, but his guns here are protected by wire entanglements and mines. Boers can, however, come here from Potgieter's in 90 minutes. In this lies their great strength, you must not let them leave you and throw their strength on me.

No. 85.

From General Sir G. White to General Sir R. Buller.

No. 57 P, 28th January. Your No. 174‡ of to-day. Please communicate following reply to Lord Roberts:—"Many thanks from self and force for message and congratulations. By sacrificing rest of my horses I can hold out for six weeks keeping my guns efficiently horsed and 1,000 men mounted on moderately efficient horses. I should like to publish your intention to advance *via* Orange Free State as early as you can permit me to do so. It will encourage my garrison and will be certain to reach and discourage Orange Free State men."

No. 86.

From General Sir R. Buller to General Sir G. White.

No. 121, 31st January. Consul, Delagoa Bay, reports Boers intend to flood Ladysmith by damming Klip River; German engineer in charge. Native deserter says dam is being made one mile north of Nelthorpe Station. What effect would this have on you?

No. 87.

From General Sir G. White to General Sir R. Buller.

No. 58 P, 31st January. Your No. 121§ of to-day. Consider enterprise impossible, and could have no effect.

No. 88.

From General Sir R. Buller's Chief of Staff to General Sir G. White.

No. 1526. Two troopers, Natal Mounted Rifles, arrived, Chieveley, 24th, report sent by you on secret mission which failed, and unable to rejoin you; also state under oath not to divulge cause of coming. Can you corroborate story?

No. 89.

From General Sir G. White to General Sir R. Buller's Chief of Staff.

No. 59 P, 31st January. Your No. 1526. Yes, if names are Inman and Agnew. Mission was to blow up railway bridge, on Newcastle line; warned to be silent, but not put on oath.

No. 90.

From General Sir G. White to General Sir R. Buller.

Clear line. No. 60 P, 2nd February. Information here that another serious attack will be made on Ladysmith very soon. Kruger, Steyn, and Joubert have met and arranged this. If made, I will signal to you, if possible and at night, one rocket first, to call attention,

* No. 81.

† No. 82.

‡ No. 83.

§ No. 86.

Appendix K. and then after interval of one minute three rockets fired at 15 seconds interval, all from Wagon hill, will mean I am seriously attacked. Will you acknowledge by two rockets in rapid succession from Spearman's Kop.

No. 91.

From General Sir R. Buller to General Sir G. White.

No. 184, 2nd February. Your No. 60 P* received and noted. I expect to be in position to try and force my way through on to the plain on Monday, at any rate I expect to attack that morning. Unless I can get to the plain I do not see how I can help you, but I shall do all I can. Do you think there is any chance of your being attacked before Monday, as if so, I shall concentrate to-morrow my force, which is now scattered for want of water?

No. 92.

From General Sir G. White to General Sir R. Buller.

No. 61 P, 2nd February. I have, what I believe, reliable information that Steyn, Joubert, and younger brother of latter, have held meetings near here, and determined to attack Ladysmith again. Kruger expected daily, when plan will be settled. Majority of Boers are for fighting on here to the last. At conference a Field-Cornet favoured peace. Steyn threatened to dismiss him, on which whole commando threatened to go home. Steyn told Officers attending meeting that they had to fight it out here as that was what they came to Ladysmith for. Boer losses 20th to 24th described as very great, probably 1,200. Effect of lyddite shell described as making great impression, not only killing Boers but burying them, leaving a hand sticking out here or a leg there. Your 184 just received. Do not expect attack before Monday. Attack to-morrow not very likely, but if made shall hope to give good account of ourselves. Attack on Sunday most improbable.

No. 93.

From General Sir R. Buller to General Sir G. White.

No. 185, 2nd February. Your No. 60 P.+ We have no rockets, but your signals will be acknowledged by two fires which would be lighted on Spearman's Kop.

No. 94.

From General Sir R. Buller to General Sir G. White.

No. 186, 2nd February. With reference to my telegram No. 185,† following just received from Secretary of State for War:—"Correspondent here has letter from Count Villebois Mareuil, saying Boers have laid their plans to take Ladysmith on 5th February, and will certainly do so. We believe Mareuil is on Joubert's Staff."

No. 95.

From General Sir R. Buller to General Sir G. White.

No. 188, 3rd February. Acknowledge receipt of this telegram. Bar accidents, I attack the position in front of me Monday morning, and hope to establish myself on the flats before nightfall. I shall try my best. Please note that the Boers removed the helmets and arms of our dead on Spion Kop. They may intend to try and deceive the sentries if they attack you.

No. 96.

From General Sir G. White to General Sir R. Buller.

No. 62 P, 4th February. Your No. 188§ of yesterday received and noted. We are all most grateful for your efforts on our account and wish you all success. Precautions taken against use of disguise by enemy.

No. 97.

From General Sir G. White to General Sir R. Buller.

No. 63 P, 4th February. One green warning rocket, then interval of one minute followed by red, blue, red rockets at 15 seconds interval.

No. 98.

From General Sir R. Buller to General Sir G. White.

4th February. Your No. 63 P|| of to-day. Received and noted.

No. 99.

From General Sir R. Buller to General Sir G. White.

No. 190, 7th February. The enemy is too strong for me here, and though I could force the position it would be at great loss. The Bulwana big gun is here, and a large force. My plan is to slip back to Chieveley, take Hlangwane, the Boer position south of the Tugela and east of Colenso, and the next night try and take Bulwana Hill from the south. Can you think of anything better? I find I cannot get my guns and trains through these mountains. I hope to be at Hlangwane on Saturday: keep it dark.

No. 100.

From General Sir G. White to General Sir R. Buller.

No. 64 P, 8th February. Your No. 191 of yesterday. Gun opposite you was formerly on Telegraph Hill. Bulwana gun still in position here. Cannot offer suggestions as do not know country or where you propose to cross Tugela. I could help at Bulwana. The closer to Ladysmith you can establish yourself the better chance we shall have here.

No. 101.

From General Sir R. Buller to General Sir G. White.

No. 191, 8th February. My No. 190¶ of yesterday. For "Saturday" read "Monday."

No. 102.

From General Sir R. Buller to General Sir G. White.

No. 192, 9th February. Following received from Secretary of State for War:—"Suspensions exist that there may be leakage of official intelligence. If possible, ascertain from Ladysmith whether copy of Z or other cipher or code book was lost at Dundee." Please give the information required.

No. 103.

From General Sir G. White to General Sir R. Buller.

No. 65 P, 12th February. Your No. 192,** 9th February. Only cipher lost at Dundee was South African Playfair, with key-word "Lines." War Office telegraphic code also believed lost.

No. 104.

From General Sir G. White to General Sir R. Buller.

No. 66 P, 13th February. Considerable movement yesterday among Boer camps. All those north of Potgieter's moved, some towards Potgieter's Drift and some eastward. We anxiously await news from you.

No. 105.

From General Sir R. Buller to General Sir G. White.

No. 1780 (received without date on 13th February). Field-Marshal desires me to communicate the following to you:—"Your telegram, 28th January. I have entered Orange Free State with a large force, specially strong in Cavalry, Artillery, and Mounted Infantry. Inform your troops of this, and tell them from me I hope the result of next few days may lead to pressure on Ladysmith being materially lessened."

No. 106.

From General Sir G. White to General Sir R. Buller.

No. 67 P, 14th February. Two civil residents, H. J. Ladd and J. R. Gorton, have escaped from hospital camp I was allowed by Joubert to form for protection of sick and non-combatants out of fire. In doing this I consider they have made use of camp in a manner that violates

No. 109.

From General Sir G. White to General Sir R. Buller.

No. 70 P, 16th February. Considerable move northward took place yesterday afternoon and evening. Not less than 2,000 men, with large proportion of wagons, moving north up valley of Klip River towards Candy-cleugh (see page 33 of Report on Communications in Natal). Boers still working hard at dam in Klip River. When moving off, Boers set fire to several farms in Dewdrop Valley.

No. 110.

From General Sir R. Buller to General Sir G. White.

No. O 415, code, 16th February. Your No. 67,‡ 14th February. Have given instructions for the two men you mention to be arrested if they can be found.

No. 111.

From General Sir R. Buller to General Sir G. White.

No. 202, 16th February. Your No. 66 P,§ 13th February. I am engaged in trying to turn the enemy out of the position he holds south of Tugela River and east of Colenso. It can best be described as Monte Christo Farm, and consists of west slopes of Cingolo Mountain and east slopes of Hlangwane Hill.

No. 112.

From General Sir R. Buller to General Sir G. White.

Clear line. No. 203, 16th February. I hear that 300 Germans have joined the Boers round Ladysmith, and that you will be attacked before 26th February, and that I shall be attacked at the same time.

No. 113.

From General Sir G. White to General Sir R. Buller.

No. 71 P, 16th February. Your No. 203|| of to-day. I think another attack here quite possible. Have strengthened defences and will try to give good account of ourselves, but men are on very short rations, and are consequently very weak. We are eating our horses. Have no grain left for animals, and grass is very scarce.

No. 114

From General Sir G. White to General Sir R. Buller.

No. 72 P, 19th February, 10 a.m. Sandbach's message to Hunter received. I congratulate you on your important success. We have observed 160 wagons coming from Tugela direction and moving north. Let me know when you intend attacking position north of Tugela, and whether you come *via* Bulwana or Colenso road, and I will try and co-operate.

No. 115.

From General Sir G. White to General Sir R. Buller.

No. 73 P, 21st February. We have observed reinforcements for enemy disembarking at Modder Spruit Station, and about 750 mounted men have been seen during last two days moving south *via* Bulwana.

No. 116.

From General Sir R. Buller to General Sir G. White.

No. 207, 21st February. I am now engaged in pushing my way through by Pieters. I think there is only a rearguard in front of me. The large Boer laager under Bulwana was removed last night. I hope to be with you to-morrow night. You might help by working north and stopping some of the enemy getting away. A large camp has been moved to-day from the hill between the station and Caesar's Camp.

No. 117.

From General Sir G. White to General Sir R. Buller.

No. 74 P, 21st February. Your No. 207¶ of to-day. We can detect no signs of enemy retreating; all indications point the other way.

No. 118.

From General Sir R. Buller to General Sir G. White.

No. 208, 22nd February. I find I was premature in fixing actual date of my entry into Ladysmith, as I am meeting with more opposition than I expected, but I am progressing.

No. 119.

From General Sir G. White to General Sir R. Buller.

No. 75 P, 22nd February. Reliable native scout reports all Free State Boers gone. Transvaal Boers chiefly collected at Woodhouse's Farm, two miles west of Pieters. Three guns on Table Hill, two miles west of Woodehouse's. Effect of your guns described as very great.

No. 120.

From General Sir G. White to General Sir R. Buller.

No. 76 P, 22nd February. Your No. 208** of to-day. I know you are beating the enemy, stick to them. I carried out a small operation this morning; but my men are so weak from insufficient and inferior food that they are unfit for the field, horses more so.

No. 121.

From General Sir R. Buller to General Sir G. White.

(Without number or date.) Received 22nd February. Can only hold Monte Christo temporarily. Shall endeavour to open communication with you further on.

No. 122.

From General Sir G. White to General Sir R. Buller.

No. 77, 26th February. I have mounted a 4·7-inch gun and a Naval 12-pr. on Caesar's Camp. Table Hill is within range of the latter, and both Table Hill and Grobelaar's Kloof of the former. Can I help your operations by using them? I have only 80 rounds for 4·7-inch.

No. 123.

From General Sir R. Buller to General Sir G. White.

No. 211, 27th February. Your No. 77 P,†† 26th February. I think you will be able to help me, but I am not close enough to you yet. I shall communicate with you later on.

—

No. 124.

From General Sir G. White to General Sir R. Buller.

No. 78 P 28th February. I am now issuing only $\frac{1}{2}$ -lb. bread stuff daily. It is of very inferior mealie meal. At this rate I can hold on till 1st April; not longer. Report to Roberts if you think necessary. I have 21,000 mouths to feed, counting children half rations.

No. 125.

From General Sir G. White to General Sir R. Buller.

No 79 P, 28th February. Following Boer movements observed between dawn and noon to-day :—From direction of Pieters to behind Bulwana, 5 guns, 20 wagons, 300 men; from Underbrook to Roodeport, and on to north-west, 5 guns, 140 wagons, 350 men.

APPENDIX L.

Appendix L.

MEMORANDUM BY GENERAL THE RIGHT HON. SIR REDVERS BULLER, V.C., G.C.B., G.C.M.G., ON THE EXPEDIENCY OF ENTRUSTING OUR MILITARY OFFICERS WITH INCREASED FINANCIAL RESPONSIBILITY.

(Vide Question 15591.)

In 1873 I took exception to an examination paper compiled by the late Sir George Colley. He said, "Can you write a better?" I brought him one the following day. He said, "Yes, in a sense that is a better paper, but I dare not set it, nor anything like it, every candidate would fail. Your questions are all problems and our candidates have not been taught to think."

It is no unfair criticism to say that most of our boys are taught to learn by heart, and not taught to think. To be a good officer in the field a man must not only possess some general knowledge but must also have hunter's instinct. This I may define as the capacity for immediate action dictated by rapid deductions based on knowledge of human nature, knowledge of ground, and quick, accurate, comprehensive observation.

Every year county-bred boys form a smaller, and suburban-bred boys a larger proportion of our candidates; and as a rule the latter have the least hunter's instinct. How are they to be taught? Drill, training, and lectures will do a good deal, and will teach them "How to do it." But we want more, we want to train them to know what to do; to make up their own minds, to appreciate instinctively the value of any possible action and its probable effect upon others, to learn how and when to co-operate, and when and why to play a lone hand. An echo from South Africa comes in here well as an illustration, though the story is probably untrue. The party were in a tight place; the Colonel turned to his men and said, "Men, for God's sake, tell me what to do." The men replied, "Colonel, for God's sake do something." When the blind lead the blind want of success is assured.

All teaching requires a foundation, and we want in the Army an organised system of which the young officer can acquire an understanding as he gains experience, and which as a test he can mentally apply to the problems he is confronted with in the course of his duty. Years ago I studied the nervous system of the human body in order to gain from a superficial knowledge of a complete organisation some practical rules to guide me in the solution of the various problems that presented themselves, and the knowledge has been invaluable.

But for general use a simpler training is required.

I wish to see a regular system of financial responsibility throughout the Army. I believe it could easily be introduced and that it would promote both economy and efficiency, but it would do more than that. Every officer would learn with the alphabet of his work, that he would have successive spheres of work within which he had freedom of action but outside which he could not step without reference to higher authority; and would thus acquire the framework of his future training. To train an officer to accept responsibility, in other words to act on his own initiative, you must give him power. Give the power and train him to use it by setting bounds to its use.

In a letter which I wrote to the War Office in October, 1901, protesting against the creation of a branch of the War Office at Aldershot, I said regarding this subject:—

"The object I aim at is to assure an economical and practical administration of the sums placed by Parliament at the disposal of the Secretary of State for the up-keep of the military districts, and to train our Generals, their Staffs, and the whole Army in administrative duties.

"I propose to attain these objects by:—

"(a) Centralising in the War Office the main problems of military policy, of preparation of regulations, of distribution of funds, and of adoption of patterns.

"(b) Vesting in the military staffs in the various districts (or in various groups of districts) the administration, under regulations issued by the War Office, of the funds granted to those districts.

"(c) Assuring an effective supervision over (b) by a local audit.

"N.B.—I say 'local' because the audit I wish for will be one whereof the Presiding Officer will be expected to confer with the Commanders as to any departure from regulations the audit may disclose. If a satisfactory explanation is forthcoming the auditor will pass the query. If none is forthcoming the auditor will send the case to the War Office, where it will be considered by the Military Staff as a disciplinary case against the Commander.

"In every such district the Senior Paymaster will be the financial adviser of the Commander, it will be his duty to keep the Commander advised of the limits of the power granted to him by regulations.

"If the Commander decides to over-rule the Paymaster the latter's opinion will be recorded. The accounts of the district will be compiled in the Paymaster's Office.

"As General Officers and their Staffs become sufficiently trained to administer their districts satisfactorily this local audit can be relaxed and will eventually disappear, the district accounts passing direct from the district through the offices of the Headquarter Staff in London to the Auditor-General. The regulations also will gradually admit of being enlarged in the following directions:—

"(1) Giving only maximum limits for allowances and expecting Commanders to allot in each case the payment they think desirable.

"(2) By introducing in store-accounts a system of bookkeeping by money value and not in kind, and allowing a discretion to Commanders as to the nature of the stores they demand if within their limit of value as fixed by regulation.

"(3) By gradually extending powers granted under 1 and 2 to officers of lower rank.

"(4) By permitting officers to spend within their districts a portion of any saving resulting from improved administration."

It will be observed that in the above proposals I have given an improved position to the Paymaster. He exists; his position is understood; but he is, having regard to the quality of the work he is now charged with, the most overpaid officer in the Army. He is now merely a teller or a computing clerk without power and without responsibility. He is fit to absorb and improve upon the work now done by a large, and as I believe unnecessary, Civil Staff at the War Office. I want to make the Paymaster's a live department with responsibility and power.

Again I wish the audit to be a live audit, and to secure that the money allotted to districts is wisely, properly, and economically spent, and while securing this to train the Generals in their duties. When I left Aldershot we were paying £20,000 a year for civil labour. Not one of the Departments employing these labourers was paying the same wage or exacting the same hours.

Each department was supported by a different War Office authority, and practically all the departments were competing in the labour market against each other.

Under a sensible audit this state of affairs could not have existed.

Appendix L. In my opinion it would be easy to institute a financial training on the lines indicated, and if instituted I believe it would prove an educational system of the highest value.

The case of the officers of the East India Company in the eighteenth century is worth considering in this connection. It cannot be denied that an unusual proportion of them were men of great boldness, readiness, and resource, fearless of responsibility and quick in an emergency. May this not have been the outcome of their financial training? I state the point for what it may be worth. If it be argued against them that

many of them were too skilful financiers, and that my proposal is therefore dangerous as risking waste, malversation, embezzlement, etc, there are fifty arguments I could urge in reply, but assuredly the one fact, that, owing to the vast expansion of our system of credit, and the increased facilities of communication, *salaries and wages are now regularly paid*; is of itself a sufficient answer, and gives of itself a reason for our purer public life, and a proof that these old days are gone never to return.

REDVERS BULLER, *General*.

March 2nd, 1903.

APPENDIX M.

CONTENTS OF STATEMENT OF LIEUT.-GENERAL SIR CHARLES WARREN, G.C.M.G., K.C.B., IN REPLY TO CHARGES Appendix M
MADE BY GENERAL THE RIGHT HON. SIR REDVERS BULLER, V.C., G.C.B., G.C.M.G.

(See Question 15657.)

- (1) Preamble.
- (2) Sir R. Buller's original orders and plan of attack.
- (3) Was Trichard's Drift the best place to cross for the attack contemplated.
- (4) It was not intended that the column should pass round by Acton Homes.
- (5) Can Sir R. Buller's instructions of 15th January be defined?
- (6) My plan of operations.
- (7) The night march was a surprise to the enemy.
- (8) The position in front of us at Trichard's Drift.
- (9) Sir R. Buller's views as to crossing the Tugela.
- (10) Considerations I had given to crossing the Tugela.
- (11) We made a record crossing of the Tugela.
- (12) The time that Sir R. Buller estimated the crossing would take.
- (13) While the artillery and vehicles were being passed over the Tugela the cavalry and infantry were engaged in feeling for the enemy.
- (14) Lord Dundonald feels for and engages the enemy.
- (15) Sir R. Buller depicts an engagement on 19th January that did not take place.
- (16) Sir R. Buller's inconsistent statements concerning the capture of the Rangeworthy hills on 20th January.
- (17) Sir R. Buller states that on 20th January he left me to carry out my own plan of operations, and yet he elsewhere states that on 21st, 22nd, and 23rd January he urged me to adhere to his plans, which he states had already been hopelessly wrecked.
- (18) Should the Rangeworthy hills have been attacked in preference to the attack on the defences at Potgieter's and Doornkloop?
- (19) Sir R. Buller did not give me the assistance in my attack that he could have given.
- (20) Sir R. Buller states that I swung round my left on 21st January, and subsequently he states that my right was in advance of my left, and that I refused to advance my left.
- (21) Sir R. Buller proposed an attack on our left on 22nd January, and also desired me not to execute any enterprise further to the left, as he anticipated a counter stroke from the enemy.
- (22) Sir R. Buller came over on 23rd January, and said to me "Attack or retire"; referring to Spion Kop, so far as I understood him.
- (23) From the first Sir R. Buller appears to have had misgivings as to the practicability of the attack on the Rangeworthy hills.
- (24) Sir R. Buller gives two very inconsistent views of the position occupied on the Rangeworthy hills from 20th to 25th January.
- (25) Spion Kop.—Brief description.
- (26) The capture of Spion Kop.
- (27) Engineer operations on Spion Kop.
- (28) Artillery operations on Spion Kop.
- (29) Water supply on Spion Kop.
- (30) Supplies of all kinds on Spion Kop.
- (31) Sick and wounded on Spion Kop.
- (32) Ammunition on Spion Kop.
- (33) The abandonment of Spion Kop.
- (34) Retirement across the Tugela.
- (35) The retreat of the Boers from Spion Kop, and the complete victory of our troops on evening of 24th January.
- (36) Sir R. Buller's orders and his suggestions.
- (37) Sir R. Buller's secret reports and charges against me.
- (38) My employment in subsequent independent commands.

APPENDICES.

- (A) Project for the crossing over a river with pontoons.
- (B) Report on water supply round Fairview to Groote Hoek.
- (C) Sir R. Buller's further instructions of 17th January.
- (D) Original draft of my telegram to Lord Roberts concerning Sir R. Buller's final advance to relief of Ladysmith.

STATEMENT OF LIEUT.-GENERAL SIR CHARLES WARREN G.C.M.G., K.C.B., IN REPLY TO CHARGES MADE BY GENERAL THE RIGHT HON. SIR REDVERS BULLER, V.C., G.C.B., G.C.M.G., RELATIVE TO HIS ACTION WHEN IN COMMAND OF A FORCE FROM 16TH TO 25TH JANUARY, 1900.

(General Sir Redvers Buller's statement will be found on page 178 ante.)

(1.) PREAMBLE.

In forwarding this statement, I have to observe that it would have been comparatively a simple task to reply to, or explain, facts that had actually occurred. I find myself, however, confronted with a series of fanciful episodes based on misconceptions and misapprehensions so numerous, that it is difficult to refute them or put them right in any limited space.

Sir Redvers Buller does not state what are his sources of information concerning events of which he was not an eye-witness, and his criticisms teem with erroneous assumptions, based apparently on an imaginary aspect of affairs. The account of operations given in his telegrams to War Office of 15th to 27th January, 1900, are in the main correct, but it differs so essentially from that given in despatches of 30th January, 1900, and in his evidence before the Royal Commission, that the two accounts might be supposed to refer to totally different operations.

A great many most important documents, which were forwarded to Sir Redvers Buller at the time, have not yet been published, which alone would in a great measure refute his criticisms and correct his errors of statement. But what is most required is a really correct narrative of events; if this were promulgated his adverse criticisms would at once fall to the ground, as they are founded on an erroneous view of affairs. I find that I cannot give such a narrative without occupying too much space, and I therefore must fall back upon the shorter method of taking Sir R. Buller's criticisms *seriatim* and traversing them, giving here and there short abstracts of events, so as to connect the whole together; and placing important telegrams, letters, etc., in an appendix. By these means I may succeed in compressing my statement into a comparatively short space.

(2.) SIR REDVERS BULLER'S ORIGINAL ORDERS AND PLAN OF ATTACK.

He states in his secret report of 30th January, 1900: "I had fully discussed my orders with General Warren before he started, and he appeared entirely to agree that the policy indicated of refusing the right and advancing the left was the right one. He never attempted to carry it out" (White Book [Cd. 968], p. 17).

Sir R. Buller is entirely incorrect in the first portion of this paragraph; he is confusing two distinct subjects. There never was any full discussion concerning the orders given to me of 15th January (White Book, p. 13).

The discussion that took place was concerning the attack originally contemplated *via* Potgieter's Drift; see orders of 9th January (White Book, p. 9). Until 15th January the Second Division was to cross at Potgieter's, and engage and drive back the enemy, and then the Fifth Division was to pass the defile between Krantz Kloof and Vaal Krantz; the discussion was concerning the method of carrying this out. I had previously proposed to take Doorn Kloof, which Sir R. Buller negatived.

The proposal to attack at Potgieter's was suddenly abandoned on 15th January, and I was sent to reconnoitre Trichard's Drift, with a view to crossing there; on my return, on the morning of 15th January, I reported that the crossing could be made, but that there was likely to be hard fighting subsequently. Sir R. Buller then drew up his orders, which I received on 15th January, and then I had to draw up my orders for the night march on the following day; there was no time for any full discussion, and as there were no correct plans of the ground, there could be no real discussion as to the form of attack.

Sir R. Buller pointed to Sugar Loaf (Bastion) Hill, on the Farm Map, which he said terminated the Boer lines, and told me to swing round my line from the west of Spion Kop, as a centre, and envelop Bastion Hill, so as to roll up the Boers. As to refusing the right and advancing the left, it was a natural consequence on the nature of the ground; I could not advance without doing so. The attack was commenced under the eye of Sir Redvers Buller on 17th January, and was carried out according to the orders he himself gave to General Woodgate, as will be shown.

(3.) WAS TRICHARD'S DRIFT THE BEST PLACE TO CROSS FOR THE ATTACK CONTEMPLATED?

This is a matter requiring consideration before the criticisms of Sir R. Buller on the carrying out of his instructions can be referred to.

Trichard's Drift was a convenient place to cross for an attack on the hills *immediately in front* of it, *via* Spion Kop and Three Tree Hill; but an attack on Three Tree Hill entailed the capture, at the same time, of the whole range as far west as Bastion Hill, and would have required four brigades.

Spion Kop, however, was *taboo* by order of Sir R. Buller; though it commanded the crossing with long range guns (see Intelligence reports) and rifle fire, and under such circumstances the crossing (for the attack to be delivered in the shortest space of time) should have been made three miles higher up the river, so that the attacking line would cover the crossing, and no flank march be required in contact with the enemy's guns and rifles.

As matters stood, the phrase "refusing the right and advancing the left," used by Sir R. Buller, meant a flank march along the front of the enemy's position, within the range of their guns and of their long range rifle fire. It could not have been intended that such a march should be made, while leaving the artillery and munitions of war to pass over unguarded and uncovered.

During the crossing a brigade was required to guard our left flank on the south side, and furnish working parties to hand haul the vehicles over the pontoons, and two brigades were required to cover the crossing and feel for the enemy.

Had four brigades been sent at first an attack could have been delivered 24 hours earlier, and had the crossing been made three miles higher up the river there would have been an advantage in time, but we should have been away from the support of our Naval guns.

(4.) IT WAS NOT INTENDED THAT THE COLUMN SHOULD PASS ROUND BY ACTON HOMES.

There is not an indication of any kind, in Sir R. Buller's instructions or remarks, that he proposed that the column should go round by Acton Homes; but his frequent allusion to attacking the left of the Boer position has given rise to the assumption that such a course was contemplated, and Lord Roberts appears to assume it in his despatch of 13th February, 1900 (White Book, p. 3).

Sir R. Buller puts the matter beyond doubt in saying: "From the first there could be no question but that the only practicable road for a column was the one by Fair View. The problem was to get rid of the enemy who were holding it" (White Book, p. 17).

I have, however, been blamed for not going round by Acton Homes.

Such a course, with only three brigades, would have involved the destruction of the Natal Army. At that time the Boers were elated with the check they had given our troops at Colenso, and any advance of a force *into the hills without first beating the enemy* would have had disastrous results.

The first essential in our advance was *not to divide* our comparatively small force. Therefore any breaks in our whole line by pushing my section far beyond Spion Kop was tactically wrong. My guiding rule in crossing at Trichard's Drift was to keep touch with the troops at Potgieter's Drift; so long as we did so my right was more or less protected, and the long range guns could help us. Had we done otherwise and passed off to the left our communications would have inevitably been cut off. General Lyttelton's telegrams to me all point to the same view. I am sure that anyone with military knowledge, and aware of the inexperience of our officers and men in Boer warfare, will realise that (so long as the Boers were jubilant) our strength and safety lay in our keeping together and *beating them* as near to the river as we could get them to fight.

That the Boer intention was to lure us on to Acton Homes I do not doubt. The valley there is a *cul de sac* where battalions could have been annihilated by small bodies of Boers placed in the hills surrounding it on three

sides. Sir R. Buller on 17th January himself informed me, that according to report, the intention of the Boers was to lure us away to west, and he advised me to be careful in advancing my left too far to west; he also subsequently sent me telegrams desiring me not to get away too far to the left, and pointed out that the road by Clydesdale (on the Acton Homes and Ladysmith road) was not suitable for advance, being full of dongas and rugged hills.

(5.) CAN SIR REDVERS BULLER'S INSTRUCTIONS FOR 15TH JANUARY BE DEFINED?

Originally they seemed simple enough, though absolutely undefined. "You will act as circumstances require, but my idea is that you should continue throughout refusing your right, and throwing your left forward till you gain the open space north of Spion Kop."

First I will allude to the discretion given me. It is distinctly stated that *I am to act as circumstances require*; if there is any meaning to be attached to words, this means that the responsibility for the form of attack rested with me, and I claim to be judged according to that responsibility, and not according to the "idea" of Sir R. Buller, which was only put forward as a general guide. Either I had the responsibility or I had not. If I had, then Sir R. Buller cannot state that I disregarded the instructions in exercising the discretion he gave to me.

With this preamble I proceed to point out what Sir R. Buller's instructions actually were intended to convey. Bishop Baynes (in "My Diocese during the War," p. 189) gives the idea in a few words, as derived from General Lyttelton. I was, when in line, to swing my left forward, with my right resting on Spion Kop as a pivot. This is the only meaning that can be attached to the proposals. My left was to envelop Barton Hill; this was stated to me verbally, both at Spearman's and at Trickard's Drift, by Sir R. Buller. So far the meaning appears simple enough, and Sir R. Buller in his secret paper (White Book, p. 17) also points out that the only practicable road was by Fair View, and that "the problem was to get rid of the enemy who were holding it." Thus it is evident that from the first Sir R. Buller had views only concerning the initial operations involving the taking the outer line of the Rangeworthy Hills. It was still a problem in his mind how the further advance was to be made.

In further confirmation as to the road to be taken is the list of waters along the road from Fair View to Groote Hoek supplied to me on 15th January. (Appendix B.)

Thus far there is no apparent difficulty. But on 17th January Sir R. Buller wrote me a letter—received 18th January (Appendix C)—stating that, when watching the attack on the enemy's lines by General Woodgate, he did not consider that General Woodgate had kept his left sufficiently disengaged. This letter adds to the instructions and complicates them, for instead of attacking in line, and swinging round the left, he now proposes that when the line is in contact with the enemy, and cannot advance, it is to *turn half-left*. He says: "If you can make a direct advance, it will be in line, but if you are checked, the next advance must be by moving half-left; I mean that to get on your left will creep outward and forward, and your right follow." It is clear from this that I was to search for an opening where I could attack, commencing from the west of Spion Kop, and moving to the left.

It will be seen from General Buller's telegrams of 17th to 27th January, 1900, that these instructions he gave me were adhered to so far as they could have any meaning attached to them. But in fact, the terms "to refuse the right and advance the left," without any limitations or explanation, is merely a kind of oracular statement. It can always be said afterwards that it was carried out too far or not far enough. If it meant swinging round the left on a pivot, it would depend on the length of the line, how far it extended, and if it meant moving off diagonally to the left, with the enemy's lines continuous, it meant going into the Drakensburg. There seems to be only one reasonable conclusion as to which was intended, namely, the attack on the Rangeworthy Hills.

(6.) MY PLAN OF OPERATIONS.

Sir R. Buller states: "I was dissatisfied with Warren's operations, which seemed to me aimless and irresolute."

I can say that I had very clear and certain plans in my own mind, keeping in view Sir R. Buller's instructions;

and I may say also that I had had particular facilities for knowing the Boer method of warfare, having served with Boer burghers against Kaffirs in 1878-9, and having commanded an expedition against Boers in 1884-5.

I had heard many methods of relieving Ladysmith discussed, but not one that I considered likely to have been successful. The general idea was to send a large body of cavalry (some 3,000) to make a dash at the Boer lines round Ladysmith, either by Acton Homes or Weenan. Our cavalry and mounted men were not then fitted for such enterprises in mountain countries, and such an attempt would only have resulted in their being surrounded in the mountains. They were not numerous enough, experienced enough, or well enough armed to succeed in such a business so long as the Boers were jubilant.

Only two methods of relieving Ladysmith were possible, and in each case it would consist of *breaking up*, and not merely in *breaking into*, the Boer lines. (1) On the one hand, by an overwhelming assault of infantry on a position of the Boer lines, combined with a general advance of our whole long line; or (2) on the other hand, by pounding away with our artillery at the Boers in their trenches until they were demoralised, and nearly on the run, and then launching an infantry assault. We were not strong enough to sweep over the country by sheer force of numbers, and our only prospect of success lay in the second method, of preparing a way with artillery bombardment of the Boer lines. It will be seen from Appendix D (my telegram to Lord Roberts, of 12th February, 1900) that this is what I proposed in the final advance to relieve Ladysmith, and in that way we did relieve Ladysmith.

My plan, therefore, was to demoralise the Boers with artillery fire, and then to assault their lines with infantry fire, and this would take some time.

The mere gaining a temporary advantage could only be considered as an *accessory*; our main object was to knock the confidence out of the Boers, to show them the points in which British soldiers (as then taught) excelled them, viz., in endurance, perseverance, tenacity of purpose.

It was necessary that they should learn this, and they did learn it at the Rangeworthy Hills and Spion Kop, and again about Hlangwane, the Gomba, and Pieters.

My instructions in the main seemed clear to me, and even without them, very little change in the course pursued could have been made, given the crossing at Trickard's Drift. Spion Kop being *taboo*, the only possible place for attack was the Rangeworthy hills as far as Barton Hill; beyond that the valley of Acton Homes runs between two ranges of hills, and was swept with the fire of long-range guns, to which we could not reply, having none ourselves.

At the time of receiving my instructions, the topography of the country was unknown, and I had to reconnoitre to find out how the roads ran, and feel for the enemy and elaborate a plan of attack.

(7.) THE NIGHT MARCH WAS A SURPRISE TO THE ENEMY.

Sir R. Buller states: "The arrival of the force at Trichard's Drift was a surprise to the enemy, who were not in strength."

It was intended that the crossing should be commenced as a surprise, and the hills immediately commanding the crossing occupied by our troops; but the hills beyond could not be reached so rapidly by our troops as by the enemy who were camped immediately behind Spion Kop, and within two hours of sunrise on 17th January the Boers could have had from 5,000 to 10,000 men ready to oppose us.

The enemy did not oppose us strongly at Trichard's Drift because, in doing so, they would have been more or less exposed to the fire of our Naval guns situated near Potgieters, and they wanted to turn us away from the help of those guns.

(8.) THE POSITION IN FRONT OF US AT TRICHARD'S DRIFT.

Spion Kop and the Rangeworthy Hills are the commencement of the Drakensburg Mountains. Commencing at Potgieter's Drift, these hills first run south-westerly, culminating in Spion Kop, which stands out as the salient of a position overlooking the Tugela at a distance of about three miles, and is a strategic point of great importance. Then, with a break, they run north-westerly for about ten miles as the Rangeworthy Hills, till they become absorbed in the Drakensburg Mountains. These hills form the watershed

Appendix M.

of two river systems; to the east are the branches of the Blaubank River, running towards Ladysmith, and on the west are the branches of the Venter's Spruit, which runs under Van Reenan's Pass, and passing through a broad valley, falls into the Tugela west of the Rangeworthy Hills and Spion Kop. This broad valley, in which Acton Homes lies, is entirely unconnected with the Ladysmith plateau. Acton Homes is commanded on the east, north, and west by high hills, and has of itself no strategic value. There is no open plain to the north of Spion Kop, except the small basin plateau of Groote Hoek, about a mile and a half wide, and connected with the Ladysmith plateau. It is separated from the Venter's Spruit and from Acton Homes by the watershed of the whole of the Rangeworthy Hills.

There are two roads over the Rangeworthy Hills; the more southerly by Fair View to Groote Hoek, immediately west of Spion Kop. It is about five miles from Trichard's Drift to Groote Hoek by this road; the more northerly road runs nearly east-and-west through Acton Homes; after running over the Rangeworthy Hills, it passes through a rugged country about Clydesdale, full of dongas and kopjes.

No advance could be made by Acton Homes without first securing the hills north, east, and west. Thus, strategically Acton Homes could not be considered as a route for advance, except with an overwhelming force.

The road by Acton Homes, however, was known to be the line of communication of a large portion of the Orange Free State Boers, and the question would naturally arise whether it was desirable to hold and secure it.

The answer is clear. For a large and overwhelming attacking force Acton Homes was a point to secure, but for a small attacking force such as that with Sir R. Buller, the Acton Homes position was to be avoided. For the relief of Ladysmith it was strategically a mistake to attempt to cut off the Boers from the Orange Free State at a time when they were desirous of proceeding there to resist Lord Roberts' threatened advance. The true strategy lay in inducing the Orange Free State Boers to retire into their own country, so as to diminish the preponderating Boer force then in Natal.

(9.) SIR R. BULLER'S VIEWS AS TO CROSSING THE TUGELA.

I do not think that Sir R. Buller can have consulted any experienced Colonist as to the proposed crossing, for he says: "I do not think you will find it possible to let oxen draw the wagons over the pontoons. It will be better to draw them over by horses or mules, swimming the oxen." (White Book, p. 17.) He does not appear to realise that horses and mules when unused to going over such bridges, have to be coaxed over for the first time. In peace time a few could be got over without much delay, but in war that little check, with thousands of animals, amounts to many hours, and is a serious consideration.

The whole number of vehicles sent with us would have taken more than 10 hours to pass a given point at their usual speed. What would be the time they would take when the oxen had to swim over and the wagons pulled over by mules unaccustomed to pontoons?

Is it possible to make any estimate? Supposing the ox wagons could be got across at the rate of four an hour (with 232 ox wagons), it would take 58 hours, and the mule and horse vehicles (say 252) could not, even with trained mules, be got over quicker than 12 an hour, taking 21 hours, thus giving a total of 79 hours. But with untrained mules it would take at least double that time, or in all 100 hours, or, working night and day, 4 days 4 hours.

Again, the pulling of a heavily-laden ox wagon out of a drift or up a rutty bank by mules is an almost impossible task, so that the mules and oxen would have had to be on the road at the same time, one set to pull the wagon across, and the other set to pull the wagon up the bank by a path at right angles to the pontoons.

I feel convinced that this matter of crossing our 500 vehicles, with thousands of mules and oxen, had never been thought out. The problem was left to me to solve.

(10.) CONSIDERATIONS I HAD GIVEN TO CROSSING THE TUGELA.

We were aware on leaving Cape Town for Natal that the Boers had made the north bank of the Tugela their

line of defence. It was a formidable obstacle, as it is about 100 yards wide, has a rapid current, and in wet weather is impassable by any of its fords. On board ship I instituted war games to consider the crossing, and I came to the conclusion that the best point to cross at (failing Hlangwani) was opposite to Doornkloop, near the junction of the Greater and Lesser Tugelas; and that it was a necessity that we should at once establish a post on the north side of the Tugela, with a pontoon bridge, so as not to depend on the rise and fall of the river.

On January 15th I issued projects to the senior officers of the 5th Division (see Appendix A), calling on them to state how they would cross over an imaginary river defended by one long-range gun, with a view to causing the officers under me to think the matter well over.

On January 15th I issued plans of the country about Potgieter's (from the farm map), but had to withdraw them at once, and make and issue plans of the ground about Trichard's Drift, and on January 17th I issued a more complete plan divided into numbered squares, so that officers could signal to each other and to me concerning particular spots of ground they wished to refer to.

(11.) WE MAKE A RECORD CROSSING OF THE TUGELA.

It has been inferred from Sir R. Buller's remarks that the time taken in crossing the Tugela was excessive. On the contrary, it was a record crossing, as will be seen from the comparison given below.

Sir R. Buller states (White Book, p. 6) that in retiring across the Tugela on January 25th-27th he took 47 hours, viz., from 9 a.m. January 25th to 8 a.m. on January 27th, and he speaks of this crossing as reflecting great credit on his staff officers of all degrees.

In crossing the Tugela on January 17th-18th I had about the same numbers of vehicles to cross as had Sir Redvers Buller, but they were more heavily laden with food and ammunition, and I completed the crossing in 38 hours, or in about three-quarters of the time taken by Sir R. Buller, viz., from 8 a.m. January 17th to 10 p.m. on January 19th.

The crossing on January 17th and 18th was infinitely more difficult than the recrossing on January 25th to 27th, because the wagons were all full; the conductors, drivers, etc., were for the most part amateurs, so great had been the drain in Natal for properly qualified transport men. The mules were scratch lots, hastily got together for the 5th Division, and did not know their drivers, and ramps had to be cut on the banks of river.

The discipline of the troops was excellent, but the discipline amongst the drivers and conductors had yet to be established, and anything in the least out of the way caused confusion. The regimental and staff officers had had no experience at such crossings, and I was almost the only officer present who knew about crossing animals under such circumstances, with the exception of the Colonists, who ably assisted in the work.

The mules could not be trusted to go over the pontoon by fours as taken out of the carts, but had to be led two by two, and the wagons had to be hauled over by fatigue parties.

It would have been impossible to have got the vehicles over in the short space of time had I not extemporised a second bridge for part of the time, and got a great number of the wagons over by the drift.

It may be said that the whole time was occupied in getting over the artillery, troops, and munitions of war, as the food wagons were got over separately.

(12.) THE TIME THAT SIR R. BULLER ESTIMATED THE CROSSING WOULD TAKE.

Sir R. Buller states in his telegram to War Office on morning of January 18th the time he expected the crossing to take. "Four miles higher up (Trichard's Drift) Warren has crossed the river by a pontoon bridge 85 yards long, and hopes that his force will, by the evening, have advanced five miles from the river. To his right front the enemy are busily entrenching."

Now this information must have been derived from his personal observation when with me all the afternoon of January 17th overlooking the crossing; and it is thus plain that he then expected that I should have got over my vehicles by evening of 18th, and advanced five miles.

Now what was the actual result of our crossing? By the evening of January 18th I had crossed all my vehicles and troops, and was ready to march my infantry and artillery before sunrise on the following morning; part of my cavalry had proceeded about nine

miles from the river, had encountered the enemy near Acton Homes, and required all the remaining cavalry to support them, and General Woodgate had arranged for a night attack on the enemy's position in front, it being considered too strong to attack by day. This is a copy of General Hart's note to General Woodgate on subject:—

"The operations you propose might be done by night with the moon. It would probably, I think, result in severe repulse by day."

This was written early on morning of January 18th, and shows that General Hart must at that time have considered the enemy to have been gathered in considerable strength if two brigades could not attack without severe repulse.

(13.) WHILE THE ARTILLERY AND VEHICLES WERE BEING PASSED OVER THE TUGELA THE INFANTRY AND CAVALRY WERE ENGAGED IN FEELING FOR THE ENEMY.

Sir R. Buller states: "Sir C. Warren instead of feeling for the enemy elected to spend two whole days in passing his baggage. During this time the enemy reinforced and strengthened his position." (White Book, p. 17.)

"He met with very slight opposition, but remained that day and the 18th passing over his baggage." (Evidence, Royal Commission on the War in South Africa, February 18th, 1903.)

"At that time we had a fine chance. After the 17th our advantage was fast vanishing." (Interview with "Daily Mail," April 18th, 1902.)

The manner in which facts are misrepresented in these paragraphs gives a very wrong complexion to affairs. It has led the public to suppose that I took with me all kinds of camp equipage that should have been left behind.

There was no baggage with my column in the ordinary acceptance of the term, and Sir R. Buller has given a wrong impression in speaking of artillery and munitions of war and food for the march under that name; although I would observe that the term was used generally for the whole *impedimenta* of the column.

In my force orders of January 16th is the following: "The only baggage that will be taken with the column will be the great coats of the men, camp kettles, and a certain proportion of regimental tools, with 20lbs. per officer, including their canteens. All other baggage, blankets, and waterproofs, and other gear will be packed in separate wagons, and will proceed to Spearman's Hill."

Thus the vehicles with the column contained only what was required for the first line—great coats, food, and munitions of war, besides the artillery, engineer, and medical stores, and vehicles. It was, I believe, the lightest equipped column of a mixed force that was at any time sent out during the war in South Africa. (See Lord Roberts' orders concerning transport, January to June, 1900.)

Thus my force has been pictured as luxuriating in all kinds of comfort during those eight days north of the Tugela, while the men had nothing but their great coats, not even waterproof sheets, and were sleeping out in the rain in the open.

Again, Sir R. Buller states that I did not feel for the enemy during those two days (January 17th and 18th). This is absolutely untrue.

The Cavalry Brigade was ordered across the Tugela to feel for the enemy as soon as Lord Dundonald reported himself to me on January 17th. The horses did not like the hollow noise of the pontoons, and they went over by the drift (with some difficulty to the smaller horses). They did not complete their crossing till the evening of 17th, and they bivouacked that night within the infantry lines. This crossing took place immediately under the eye of Sir R. Buller, who was watching it all the afternoon. On morning of 18th the cavalry went west and north-west, and Lord Dundonald reported to me that the Rangworthy Hills were occupied in force by the enemy. That afternoon he came in collision with the enemy, and asked for reinforcements, which I sent him.

Two brigades of infantry under Generals Woodgate and Hart crossed the Tugela on the morning of January 17th, and at about noon Sir R. Buller met General Woodgate at the ferry, and gave him orders relative to the attack, told him not to hurry, and to give the men their dinners before he started. The hills immediately commanding the pontoon were cleared of the enemy by about 3.30 p.m. for, say, 2,000 yards from the river. Beyond that there was a dip in the ground.

Sir R. Buller witnessed the attack, and wrote letter (Appendix C.) already referred to. On morning of January 18th General Woodgate proposed to advance, but General Hart considered it too dangerous by day (see No. 12), and a night attack was arranged, which did not come off. On the afternoon of January 18th I reconnoitred the position on the Rangworthy Hills, and saw that if we took them we could not take our wagons by the Fairview Road without first taking Spion Kop also, or rendering it harmless. I therefore thought it necessary to reconnoitre the Acton Homes road, which I did next day.

Thus of the two days (17th and 18th) which Sir R. Buller states I occupied in passage of my baggage, without feeling for the enemy, on one day (17th) the work was carried out under his own eyes; he gave orders himself to my subordinates, and he claimed my attention all the afternoon, instead of allowing me to be occupied fully with my own arrangements. If matters were not being carried out in accordance with his views, it is strange that he should not have notified this to me verbally or in writing. His letter (Appendix C.) shows, however, that he had nothing to say against what was being done, but he referred only to a tactical error which he supposed General Woodgate had made. I may add that General Woodgate assured me that Sir R. Buller was mistaken in his assumption.

(14.) LORD DUNDONALD FEELS FOR AND ENGAGES THE ENEMY ON JANUARY 18TH.

A great deal of confusion has arisen as to the position of Lord Dundonald's engagement, because the maps of the country issued in the daily papers showed Spion Kop to the west of Acton Homes, and the engagement is depicted in some maps as taking place on the Boer lines of the Rangworthy hills. Nothing of the sort occurred.

Lord Dundonald himself reported that the engagement took place two miles west of Acton Homes, and Sir R. Buller in his telegram to War Office of January 18th, says it took place to west of Acton Homes.

The facts as related by Lord Dundonald are briefly as follow:—At about 3 p.m. to 4 p.m., on January 18th a party of 200 to 300 Boers were seen by the advanced cavalry to be going west along the Acton Homes road, in the direction of the Orange Free State. They were successfully ambuscaded by Major Grahame, at a point where the road crosses the Venter's Spruit, near Frere's Store, at 25 miles from Ladysmith. Some of the Boers were shot down, most of them fled, but several got away to the west of Frere's Store, and took up a position amongst some rocks, probably near farm. *Nooitgedacht*; they numbered about 30 altogether.

This exploit was seen by Lord Dundonald from his signal station at Earthcote, and he sent me an "express," saying he was heavily engaged, and required all the cavalry to assist him. This I received about sunset. I sent all the cavalry at once, and detached General Hildyard's Brigade to march at 4.30 a.m. next morning to Venter's Spruit to support him. This was a serious mishap, as it appeared at the time, altering all my plans, but next morning I learnt how trivial the engagement had been, though it was a most successful and well-arranged exploit, treated as an exploit only.

Later in the night I learnt more of the engagement, but it was not till about 10 a.m. on the following day that I ascertained that Lord Dundonald could hold his own without further assistance. The advanced post of cavalry, to the west, remained in this position till the morning of January 20th, when it was shelled out by the Boer long-range guns above Acton Homes.

Thus a skirmish of Lord Dundonald with a few Boers riding along a road west of the Venter's Spruit and Acton Homes has been changed by Sir R. Buller into a forward movement of the cavalry eastward towards Ladysmith. In this affair the cavalry got too far away to the west, and quite out of the direction of Ladysmith.

Sir R. Buller tells the "Daily Mail" (April 18th, 1902): "But for Warren, Lord Dundonald, after winning Acton Homes, would have pressed forward, and probably ended the matter by entering Ladysmith. Warren effectually stopped Dundonald by refusing him further supplies."

Lord Dundonald never had the slightest prospect of getting past Acton Homes to Ladysmith; if he had attempted to do so he would certainly have been captured.

I found it necessary, when he got so far away from me, to remind him of Sir R. Buller's orders, and said: "Our objective is not Ladysmith; our objective is to

Appendix M. effect junction with Sir R. Buller's force, and there to receive orders from him." To this he replied, "I quite understand your general plan, and that we have to unite with Sir R. Buller." At this time Lord Dundonald was corresponding direct with Sir R. Buller, I presume by his orders.

Lord Dundonald never gave me the slightest indication that he would push forward by east or north-east towards Ladysmith, or that he found any opening in that direction; so far as I know he was never able to make any reconnaissance of the Boer lines in that direction. In any case, he never sent me any information up to January 19th, except the following: "Silbourne, who took the flag of truce into the enemy's lines last night, reports the heights on either side of main road [Acton Homes to Ladysmith] to be very strongly defended," and a verbal report that the enemy were concentrating at Acton Homes. In his report subsequently he states that on the afternoon of January 18th (i.e., on his arrival at Acton Homes) he sent out patrols to the west and north-west, and saw that large numbers of the enemy were continually arriving from the east, to concentrate and resist an attack by him on the Acton Homes to Ladysmith road, and he made no attempt to meet them. So far from the cavalry having pushed up in any way to the enemy's lines on the Rangworthy hills, the tendency was entirely in the other direction, and the position taken up west of Acton Homes was an anxiety to me on that account.

(15.) SIR R. BULLER DEPICTS AN ENGAGEMENT ON 19TH JANUARY, WHICH DID NOT TAKE PLACE

The events on January 19th are briefly as follow:—The troops and vehicles of the force were all on the march from Trichard's Drift to Venter's Spruit Laager early in the morning. General Hildyard's brigade started at 4.30 a.m. to assist Lord Dundonald, if it should be necessary. General Woodgate's and Hart's Brigades covered the flank march of the vehicles, which were in six parallel columns. In doing so General Woodgate was directed to search for any weak point in the Rangworthy hills defence, and to make a reconnaissance up the slopes of Three Tree Hill, where I considered we could attack. In the meantime I reconnoitred towards Acton Homes, and saw that it would be impossible to take troops in that direction with wagons without occupying the hills beyond, and for this we were too weak.

I then settled to attack the Rangworthy hills on the morning of January 20th, sending our wagons back again to Potgeiter's, as we could not take wagons by either of the two roads. I then saw Lord Dundonald, who was still in possession of the site of his engagement of 18th, but could not assist by any advance. I then communicated my plans for the next day to the Generals and Staff Officers concerned. There was no engagement on the 19th, except the flank march of the brigades, and the reconnaissance made.

These are Sir R. Buller's criticisms on the work of January 19th:—

"On 19th he attacked and gained a considerable advantage; on the 19th I ought to have assumed command myself. I saw that things were not going well—indeed, everybody saw it" (White Book, p. 17).

"On the 19th Lord Dundonald, with Warren's cavalry moving northward, had taken the right flank of the Boer position, whereas General Warren had advanced to the westward, and was crossing Venter's Spruit. I was dissatisfied with Warren's operations, which seemed to me aimless and irresolute. Dundonald's movement was a decided success, and should have been supported by artillery, while Warren's infantry should have attacked the salient which Dundonald's success had left exposed. On that night I debated with myself whether or not I should relieve Warren of his command." (Evidence Royal Commission on the War in South Africa, February 18th, 1903.)

These are the statements of a man in a dream. No such occurrences ever took place so far as I know. Lord Dundonald was with me on the afternoon of the 19th, and his reports never mention any such occurrence.

If Lord Dundonald had really taken the right flank of the Boer position would not Sir R. Buller, who was in direct communication with Lord Dundonald, have asked me for a report, and telegraphed it to the War Office?

In these statements Sir R. Buller finds fault with me for going down to the water at Venter's Spruit; in his letter to me of January 17th he tells me to do so in these words: "If your direct road is blocked, we must go forward by moving off to the left, and this will have

the further advantage, that it will keep you near the water at Venter's Spruit." (Appendix C.)

The only possible solution I can suggest to this extraordinary misconception is that Sir R. Buller imagines that Lord Dundonald's attack on Bastion Hill on January 20th took place on January 19th against some position further north than Bastion Hill, and that he was subsequently withdrawn from it. But as Sir R. Buller was on the ground on 21st, 22nd, and 23rd, I cannot understand his falling into such errors.

(16.) SIR R. BULLER'S INCONSISTENT STATEMENTS CONCERNING THE CAPTURE OF THE RANGEWORTHY HILLS ON 20TH JANUARY.

Telegram to War Office, 20th January:—"General Clery, with part of Warren's force, has been in action from 6 a.m. to 7 p.m. to-day. By judicious use of his artillery he has fought his way up, capturing ridge after ridge, for about three miles. Troops are now bivouacking on the ground they have gained, but main position is still in front of them."

Telegram to War Office, 27th January:—"Sir Charles Warren, as I have said, drove back the enemy and obtained possession of the southern crest of the high tableland, which extends from the line Acton Homes, Hungers Poort, to the western Ladysmith Hills."

This is how this successful engagement was depicted in the despatches of 30th January and subsequently:—"On the 20th, instead of pursuing it (his imaginary advantage of 19th), he divided his force, and gave General Clery a separate command" White Book, p. 17).

"On the 20th I went over and saw Warren. He had that day attacked the salient and taken it, but instead of supporting Lord Dundonald, he had induced him to fall back from the position which he had occupied on the 19th." Again he states he wished to relieve me of the command. (Evidence Royal Commission on the War in South Africa, 18th February, 1903.)

These later statements are simply a mass of misconceptions. There was no advantage gained by Lord Dundonald on 19th January, and I could not have induced him to abandon a position he never occupied. I did not divide my force and give General Clery a separate command.

Further, Sir R. Buller did not come over to see me on 20th January, as stated by him before the Royal Commission. It might be supposed that he had simply made a mistake of dates, but he says, "On 20th I went over to see Warren. He had that day attacked the salient, and taken it." He states that on this day he found that his own plans were hopelessly wrecked, and that then he left me to carry out my own plans, sending me the reinforcements I asked for. This is all wrong, as will be shown in (17). He did not come over on 20th, but he came and interfered with my operations on 21st, 22nd, and 23rd.

(17.) GENERAL BULLER STATES THAT ON 20TH JANUARY HE LEFT ME TO CARRY OUT MY OWN PLAN OF OPERATIONS, AND YET HE ELSEWHERE STATES THAT ON 21ST, 22ND, AND 23RD JANUARY HE URGED ME TO ADHERE TO HIS PLANS, WHICH HE STATES HAD ALREADY BEEN HOPELESSLY WRECKED.

"I continually proposed to General Warren that he should attack the enemy's right, which was *en l'air* and not strong, and which was part of the original programme to try and turn, but I never suggested doing this hurriedly or without adequate forethought and preparation." (White Book, p. 16.)

"On 20th I went over to see Warren. I saw . . . that my own plan of operations had been hopelessly wrecked . . . I concluded to leave Warren to pursue his work, merely suggesting to him certain changes in the posting of his troops for the greater security of the position. I then returned to my former position to watch for my chance."

Thus Sir R. Buller, though considering my operations to be aimless and irresolute, concludes on 20th January to leave me to carry them out. Yet, while considering his own plans hopelessly wrecked, he on 21st to 23rd continually urges me to adhere to the original programme of attacking the enemy's right (we had already taken it). Yet again he states that by 23rd the enemy against us were 15,000 strong, and that the right was too strong to attack. "The enemy's right was too strong to allow me to force it."

It will be seen that while I was in command Sir R. Buller speaks of the force in front of me as being

insignificant, only 600, but that when he took command it amounted to 15,000. He makes no suggestion as to where these 14,400 men were located during the interval. As it only took three hours for a party of Boers to get from their extreme left to their extreme right, from Colenso to Acton Homes, they must always have been close at hand. I therefore mention this subject in (18).

(18.) SHOULD THE RANGEWORTHY HILLS HAVE BEEN ATTACKED IN PREFERENCE TO THE ATTACK ON THE DEFENCES AT POTGIETERS AND DOORKLOOF?

In order to consider this question I take the number of Boers given by Sir R. Buller, though I am quite satisfied that it is greatly below the mark. But for the sake of comparison it is necessary to take some approximate number. He states that there were 7,000 Boers opposed to us (White Book, p. 14), but he does not add whether he includes the Orange Free State Boers at Acton Homes or not.

Sir R. Buller had on the morning of 16th January on his side 21 battalions of infantry and about 2,000 mounted men, say 23,000 in all, nearly three to one of the enemy. With this preponderating force, with the command of the high ground at Spearman's and Zwart's Kop, with two 4·7in. and eight 12-pounder long-range naval guns and 42 15-pounder guns and six 5in. howitzers, he hesitated for four days, and eventually declined to attack the enemy; all this time the enemy were strengthening their defences about Spion Kop. Then, though he disliked mountains himself—he says “I always dreaded mountains” (Evidence, Royal Commission on the War in South Africa, 18th February, 1903)—he detailed me to attack the mountains in the Drakensberg, a much more difficult task than that which he had hesitated to undertake himself in the plain. He gave me for the work 12 battalions and 1,500 mounted men, and 36 field guns, to attack a mountain stronghold, where he himself says there was no convenient position for artillery; he would give me no long-range guns with which I could reply to those of the enemy.

Supposing there were 7,000 Boers against us, we may estimate 2,000 as required for the trenches opposite Potgieters, leaving 5,000 Boers opposed to me, not to speak of the Orange Free State Boers on to our left that would be called upon.

To strike a balance. Sir R. Buller, with the commanding position for his long-range guns, and with 23,000 men, hesitated to attack a low-lying position held by 7,000 men; yet, dreading mountains, he sent me with 18,000 men, and without long-range guns or balloons, intelligence or adequate staff, to attack a line of mountain positions held by 5,000 Boers with long-range guns. I must, however, point out that Sir R. Buller's statement of 7,000 Boers is inconsistent with the Intelligence reports and with his subsequent statements.

Early in January the Orange Free State Boers occupied the Tugela heights to west of Spion Kop, while the Transvaal Boers occupied the heights to the east of Spion Kop. Just behind Spion Kop were camps of both forces.

The Intelligence reports of 10th January stated that there was a large base camp of Orange Free State Boers at Acton Homes, which supplied a camp of 100 wagons behind Spion Kop.

The Intelligence report of 16th January stated that since the 11th January there had been a general move westward up stream from Colenso of the enemy's forces, and that the only commandoes left at Colenso were that of Krugersdorp and part of that of Swaziland, and that the trenches west of Spion Kop would hold 400 men, with long-range guns firing on Trichard's Drift.

Sir R. Buller (White Book, p. 17) states that the 600 men against me on the 16th had increased by 23rd January to 15,000, when he took up the command.

Now, it is not to be supposed that this increase occurred suddenly, and Sir R. Buller himself states that from the 17th the enemy were rapidly concentrating before Trichard's Drift. The question arises, can any approximate estimate be made of the numbers on each particular day? It may be assumed that immediately the advance on Trichard's Drift was discovered the enemy would concentrate there with all their force. I suggest, therefore, the following increase, based on Sir R. Buller's figures, though I myself think the numbers were much greater from the first:—

16th January.—600 (in position in front of Trichard's Drift, with camps behind).
17th January.—10,000 (from camps behind).
18th January.—11,000.
19th January.—13,000.
20th January.—14,000.
21st January.—15,000.
22nd January.—15,000.
23rd January.—15,000.

(19.) SIR REDVERS BULLER DID NOT GIVE ME THE ASSISTANCE IN MY ATTACK THAT HE COULD HAVE GIVEN.

(a) Had General Barton been directed to attack and harass the enemy at Hlangwani and Colenso, he might have kept a considerable number of Boers off me, but owing to his receiving no instructions to do so, the Boers left his front to a great extent. (See his report, White Book, p. 43.)

(b) Had Sir George White been communicated with, he might have made some demonstration; but I think his garrison was too feeble to do anything, and that the Boers knew it, and left their lines round him to a great extent.

(c) Sir R. Buller made no use of the 10th Brigade at Potgieter's, although he states in his instructions (White Book, p. 14): “I shall threaten both the positions in front of us, and also attempt a crossing at Skiet's Drift, so as to hold the enemy off you as much as possible.” This he did not attempt to carry out.

(d) Sir R. Buller kept the balloon with him when it was comparatively useless, and never gave me any information about the enemy from 17th to 23rd January, except what he got from Sir G. White. The balloon with us would have been invaluable.

(e) Sir R. Buller kept all the long-range guns with him, though they were urgently required by us, and yet he did not use them to advantage. He could have enfiladed the whole length of the Boer lines opposite to me, and made havoc among the enemy's entrenchments with his lyddite shells. I was not aware at that time that his guns had so long a range, and he may not have been aware of it either.

(f) Sir R. Buller did not send me the 10th Brigade and the 5in. Howitzer Battery till 22nd January; if they had been sent at first operations would have been expedited.

(g) Sir R. Buller allowed me no extra staff to assist me in work of an independent command, and would not permit me to take any regimental officers to assist me unless the commanding officers concurred. All said that they could not spare any officers.

(20.) SIR R. BULLER STATES THAT I SWUNG ROUND MY LEFT ON JANUARY 21ST AND SUBSEQUENTLY HE STATES THAT MY RIGHT WAS IN ADVANCE OF MY LEFT, AND THAT I REFUSED TO ADVANCE MY LEFT.

Telegram to War Office, January 21st, 9 p.m.: “Warren has been engaged all day, chiefly on the left, which he has swung round about a couple of miles. The ground is very difficult, and as the fighting is all the time up hill, it is difficult to say exactly how much has been gained, but I think we are making substantial progress.” (White Book, p. 17.)

“On the 21st I find that his right was in advance of his left.” He then proceeds to state that my artillery were crowded on one small space, and that I had divided my fighting line into three independent commands, independent of each other, and independent of myself. This statement about independent commands independent of me is purely imaginary.

With reference to the artillery, it is still a question how far guns should be concentrated and how far they should be distributed; in this case I exercised my own judgment, in which General Clerly and the Commandant Royal Artillery concurred. As to putting artillery on the left, the 15-pounders were of little or no use then, except against infantry; what we wanted was long-range guns to reply to those of the Boers on the left. I urged strongly on Sir R. Buller the necessity of long-range guns, and he sent me the 5in. howitzers, which were very useful, but still had not sufficient range.

In the morning, however, I heard from Colonel Kitchener that a force of Boers were moving down against our left from Acton Homes, thus requiring 15-pounders on my left. Upon which I telegraphed to General Clerly, 9.35 a.m.: “A Boer force is coming round beyond left from Acton Homes. I am taking two batteries down there at once to support the left,

Appendix M which is very weak near Sugar Loaf (Bastion) Hill." It will be thus seen that I acted on my own initiative in putting guns on the left; in fact, I had spoken to General Clery on subject on previous day that it might be necessary.

At 6 p.m. this evening I rode out to west, and came to conclusion that an attack might be made on hill north of Bastion Hill if I had another brigade, and there was a preparation of howitzers. But I considered it would be very risky. I telegraphed to General Buller, saying I thought the Boers were going to make a trek to the north, and urged him to send me three battalions more, so that I could close the road, and secure their wagons.

- (21.) SIR R. BULLER PROPOSED AN ATTACK ON JANUARY 22ND ON OUR LEFT, AND ALSO DESIRES ME NOT TO EXECUTE ANY ENTERPRISE FURTHER TO THE LEFT, AS HE ANTICIPATED A COUNTER STROKE FROM THE ENEMY.

"The days went on, I saw no attempt on the part of General Warren either to grapple with the situation or to command the force himself." (White Book, p. 17.) The 10th Brigade had only arrived during the forenoon of this day, and the 5in. howitzer battery the previous evening and this morning, and Sir R. Buller had sent me a telegram at 5 a.m.: "I think it possible the enemy may try a counter stroke; they are concentrated, while your troops are widely extended, and do not support each other. I should be cautious how I attempted any enterprise further on the left at present." Sir R. Buller arrived in the morning, and told me he wished me to attack the position in front of Bastion Hill on our left on the Rangeworthy Hills if I considered it desirable, and that I must consult my Generals on the subject, otherwise he proposed to retire the force. I went over the positions with Sir R. Buller, and again I pointed out to him that unless Spion Kop was taken or neutralised we could not march our wagons over the hill road, and I had proposed to send them back, but that I hoped to capture the position in front of us after a few more hours' fire, when we had got the howitzers into work. He replied: "Of course, you must take Spion Kop." I then arranged that if we decided not to attack on the left we would take Spion Kop that night. I was myself, however, desirous of going on with the bombardment, and then assaulting the position in front of Three Tree Hill. At this time the trenches of the Boers had only been under fire one day, the 21st, and the howitzers had not yet commenced.

At the meeting of Generals, General Clery was most emphatic against an assault on the left from Bastion Hill, and I concurred with him, because I could see no particular object in possessing this position at great loss, as there were other positions behind it. The best position to capture was evidently that in front of Three Tree Hill, but it was not yet prepared for assault.

Next to this was Spion Kop. The advantages of an attack of Spion Kop over that on the left was that we should there have the fire of all our guns from both sides (i.e., Three Tree Hill and Potgieter's), and very few Boer guns could be trained on it. While in regard to the position on the left, we could get but few of our guns on it, and it was under fire of a great number of the Boer long range guns, to which I could not reply.

- (22.) SIR R. BULLER CAME OVER AND SAID TO ME (JANUARY 23RD): "ATTACK OR RETIRE." IN SAYING THIS HE REFERRED ONLY TO ATTACKING SPION KOP, SO FAR AS I UNDERSTOOD HIM.

Sir R. Buller states (White Book, p. 17) that he calculated that at this time there were 15,000 against us, or more than twice the number there were against him at Potgieter's, when he hesitated to attack. He states (White Book, p. 23) that for four days I had kept my men continuously exposed to shell and rifle fire, etc." All this conversation related in paragraph 2 of his despatch of January 30th (White Book, p. 23) was new to me when I read it. It certainly was never addressed to me, and the paragraph is written as though Sir R. Buller had had no report from me from January 19th to 23rd. At the time of this alleged conversation we had held the position for bombarding purposes on 21st and 22nd, and the 5in. howitzers had only been in use on 22nd, so that the position was not prepared for assault. Sir R. Buller said the assault must take place that night, or he should retire the force, and accordingly I arranged for the capture of Spion Kop. He refused to allow General Coke to go in command of the assaulting party, and ordered me to place General Woodgate

in his place. Now General Coke I knew, was well acquainted with throwing up earthworks, but I was not aware that General Woodgate was so acquainted. I had proposed to lead the assaulting column myself, but Sir R. Buller said I must not do this, but must occupy a central position all the time, so as to command the attack on Spion Kop, and be ready to provide against a counter stroke on our left, which he expressed some anxiety about. I quite saw the wisdom of this remark.

- (23.) FROM THE FIRST SIR REDVERS BULLER APPEARS TO HAVE HAD MISGIVINGS AS TO THE PRACTICABILITY OF THE ATTACK ON THE RANGEWORTHY HILLS.

I consider that the pessimistic views of Sir R. Buller respecting our advance were most injurious to our success; nothing could be more depressing to a force than for the Commander-in-Chief to hold such views on the subject as he has since expressed.

Sir R. Buller was with me all through January 17th watching the enemy, and yet he says to "Daily Mail" (April 18th, 1902): "After the 17th our advantages were fast vanishing, for the enemy was fast concentrating before us. "By the 19th, through Warren's dilatoriness, it was all but gone. I might have saved the situation, but after the 19th I could not well have done so." "On the 20th I went to see Warren. I saw that the advantages I had hoped for had been let slip, and that my own plan of operations had been hopelessly wrecked." (Evidence, Royal Commission on the War in South Africa.)

It is thus apparent that so early as 18th Sir R. Buller was contemplating the possibility of a retirement. Yet all this time Sir R. Buller gave me no hint of his entertaining such views.

- (24.) SIR REDVERS BULLER GIVES TWO VERY INCONSISTENT VIEWS OF THE POSITION OCCUPIED ON THE RANGEWORTHY HILLS FROM JANUARY 20TH TO 25TH.

Telegram to War Office, January 23rd: "Warren holds the position he gained two days ago. In this duel the advantage rests with us, as we appear to be searching his (the enemy's) trenches, and his artillery fire is not causing us much loss."

Telegram to War Office, January 27th: "The actual position held was perfectly tenable, but did not lend itself to advance, as the southern slopes were so steep that Sir C. Warren could not get an effective artillery position, and the supply of the troops with water was a difficulty."

"His force was in a good position, and might be successful. In any event, whether successful or not, the troops would spend some little time under fire in fairly close contact with the enemy, and would then gain comparatively cheaply that battle training in what I knew them most deficient." (Evidence, Royal Commission, February 18th, 1903.)

"General Warren's disposition had mixed up all the brigades, and the position he held was dangerously insecure." (White Book, p. 5.)

"For four days he had kept his men continuously exposed to shell and rifle fire, perched on the edge of an almost precipitous hill. I said it was too dangerous a situation to be prolonged, and that he must either attack or I should withdraw his force." (White Book, p. 23.)

"His position was insecure." (Evidence, Royal Commission, February 18th, 1903.)

The question of the security of the position must be a subject for opinion depending on many circumstances, but I was quite satisfied with it, and felt convinced that the Boers would not attack us from the front, though we were always liable to attack from the Spion Kop side.

As to mixing up my brigades, they had already been mixed up by Sir R. Buller. The 10th Brigade had left two battalions behind in Cape Colony, and had two temporarily attached, and it was now a Corps Brigade detached from 5th Division, while General Lyttelton's Brigade had been attached to the 5th Division, though it belonged to 2nd Division, and General Hart's Brigade had been attached to the 2nd Division, so that the brigades were all mixed, but not by me. If Sir R. Buller means that the battalions of the brigades were mixed up, I can state that there was less mixing up of battalions on this occasion than in any other engagement I witnessed in Natal. So far as I know the only mixture was the York and Lancaster on the left and the Connaught Rangers on the right; but such changes are inseparable from modern warfare, where an advancing line, if it intends to hold what it gets, must remain on its ground. These dispositions were made by General

Clery, of whom Sir R. Buller has stated that "with a thorough knowledge of his profession, he thoroughly understands how to lead his troops in the field."

Any battalion coming on to the Rangeworthy Hills from General Hildyard's Brigade were attached to General Hart's Brigade, in accordance with the following memorandum from General Clery: "8.30 p.m., January 21st. I will be glad if it was made clear that all troops coming up the ridge occupied by General Hart would come under his orders. If you approve, please instruct General Hildyard."

(25.) SPION KOP: BRIEF DESCRIPTION.

The Spion Kop range is separated from the Rangeworthy hills by a broad gully running from north to south. It commences at a neck (800ft. above the Tugela), the point of junction of the two ranges connecting the northern point of Spion Kop (550ft. above the neck) to Green Hill (450ft. above the neck). Green Hill is the south-easterly point of the Boer position on the Rangeworthy hills. This gully runs down for two miles to the Tugela, with a slope of about 400ft. per mile; about half-way down a gully runs into it from the north-west, half a mile long, and falling about 250 in that distance; at the head of this valley was the Engineer bivouac, situated about three-quarters of a mile south of Three Tree Hill, and there was a fair road running down it. At the junction of the two gullies the Engineers cut through the drift on January 24th, and made a crossing for wheeled traffic on to the Spion Kop side. This crossing will be called Spion Kop Drift. Just above the drift a dam was made across the gully (running from Spion Kop), to collect the water in the spruit for the use of the force on Spion Kop. From Spion Kop Drift there was a gentle ascent towards Spion Kop made available for wheeled traffic for about three-quarters of a mile (rising 200ft.), until it reached the backbone connecting the Spion Kop spur with the hill above to the east of Wright's Farm.

On the south-east slope of this backbone or ridge a supply dépôt was established, called the Spion Kop Supply Dépôt, where were congregated during the afternoon of January 24th the regimental wagons containing food and supplies, the ammunition carts, the ambulances and the dressing stations.

The wagons and carts went backwards and forwards between the supply dépôts at Venter's laager and the Spion Kop supply dépôt, through the Engineers' bivouac. The ambulances also went by this way to the field hospital at Wright's Farm. There was, however, a short way (down the main gully) of getting to Wright's Farm, up which the mountain guns came on 24th. From the Spion Kop supply dépôt the ascent to the southern and principal summit of Spion Kop commences by a zigzag path roughly made by the Engineers through the rocks and boulders, and by troops moving up and down. The distance to the summit is about a mile, and the difference in level about 800ft., so that the average rise is about 1 in 7.

There was, however, no uniform gradient; the path leads up steep gradients and along comparatively level plateaux. There are two main plateaux, the upper and the lower. The time it would take to walk from Engineers' bivouac to summit of Spion Kop without any obstacles in the way is 15 minutes to the drift, 15 minutes to the supply dépôt, and about 40 minutes from thence to the summit—an hour and 10 minutes in all. During January 24th the distance was traversed on several occasions within an hour and a-half, but owing to the congested state of traffic, due to carrying down wounded men, and also when darkness came on, the time required was much increased.

The dressing station on the summit was at first immediately in rear of the troops, but it was subsequently withdrawn for greater safety to the northern end of the Four Tree Spur, just under the top slope.

The Dorset Regiment, in reserve, was placed at the southern end of the Four Tree Spur, which was two-thirds of the way up. The gunslide was made down the steep rocks, just where the Dorsets were, about half way up; immediately below this was General Coke's helio position, at about 200 feet above the supply dépôt. From here downward was the slope averaging 1 in 10, with the exception of one steep place.

In the original ascent on the attack of January 24th, at 3 a.m., four out of five mules gained the summit before any track was made, which to a certain extent indicates that there were no places where actual climbing was required.

(26.) THE CAPTURE OF SPION KOP.

Appendix M.

The misstatements concerning the engagement on Spion Kop have been so numerous that it would require a volume to refute them all. As an example I may point out that the late Colonel Henderson, the official historian of the war, in a preface to Count Sternburg's work, "My Experience of the Boer War," states that a force of 4,000 held a position where there was not room for 500, while Colonel Thorneycroft reported on the ground that with six battalions the force was really inadequate to hold so large a perimeter. On the one hand, I have been blamed for crowding the troops on top, and on the other hand for not sending sufficient reinforcements.

The principal charge made against me by Sir Redvers Buller in his despatches is that I did nothing to assist the troops there. He states that I made no arrangements, and that Colonel Thorneycroft exercised a wise discretion in abandoning his post; and he comes to the conclusion after he (Sir R. Buller) had issued an order that there was to be no retirement, after I had telegraphed "No surrender," and after I had written to Colonel Thorneycroft a letter (which he received) stating that it was of vital importance that the position should be held.

I am quite convinced that throughout the war there was no occasion when matters were more fully considered and provided for, considering the short space of time permitted. I have further to mention that Sir R. Buller states that I ought to have done certain things at sundown, such as clearing the trenches, deepening them, arranging for artillery on the top. These were all divisional matters, which must be superintended by the officer commanding on the spot. So far as I was concerned I sent to Spion Kop everything I possessed that would be of use. Sir R. Buller had debarred me from going myself. In any case, the retirement commenced at sundown, and no intimation of this reached me till 2.30 a.m.

(27.) ENGINEER OPERATIONS ON SPION KOP.

The 17th Company Royal Engineers only had been sent with my force, the 37th Company Royal Engineers being kept by Sir R. Buller at Potgieter's.

I sent half the 17th Company Royal Engineers, under Major Massey, up Spion Kop, with General Woodgate's column, provided with entrenching tools, and at 3.30 a.m. on morning of January 24th I sent the remainder of that company, and also Colonels Wood and Sim, Royal Engineers, and their staff officers, to do all that was necessary on the slopes and summit of Spion Kop. They were employed there most of the day. The work they carried out was very considerable, and consisted of (a) entrenchments on summit; (b) gunslides on slopes of Spion Kop, completed at 3.30 p.m., for naval guns should they arrive; (c) making mule path up Spion Kop slopes, and wagon road over the drift at foot; (d) making dam for water at foot of Spion Kop for carts to fill and take up to mule path.

For these purposes not only the Engineers, but also their *bâtmens* and Kaffir drivers and boys turned out and helped; every man was employed on the works, and they worked well.

During the day I sent up to the summit of Spion Kop every pick, shovel, and crowbar, and sand bag (2,000) we possessed. They were taken up by the Middlesex and Dorset Regiments. I also had three coils of 3in-rope brought up from Venter's Spruit laager to the Engineer bivouac, to be ready in case Sir Redvers Buller should send over any long-range guns to reply to those of the Boers.

At 4.30 p.m. I telegraphed for 37th Company Royal Engineers to be sent over to relieve the 17th Company Royal Engineers during the night. They arrived at Trichard's Drift at 8.25 p.m., arriving at foot of Spion Kop at 12.30 a.m., on January 25th. They were about to ascend to relieve the 17th Company Royal Engineers when they were stopped by the retirement.

(28.) ARTILLERY OPERATIONS ON SPION KOP.

The 4th Mountain Battery started from Chieveley by train for Spion Kop on morning of January 23rd, and commenced march from Frere at 5.30 p.m., but did not make much way in the darkness. It marched all day of 24th, reaching Trichard's Drift at 2.30 p.m. Sir R. Buller told me it must have rest before it went up Spion Kop. It arrived at foot at 7.30 p.m., intimation being sent to officer commanding Spion Kop, and the ascent was commenced at 12.30 a.m., but progress was arrested by the retirement of the force from Spion Kop.

Appendix M. I constantly asked Sir R. Buller for long-range guns. At 4 p.m. on January 24th I gathered from a note from Sir R. Buller that he was sending two naval 12-pounders, and I at once sent Captain Hanwell, R.A., up Spion Kop to report to officer commanding, and look out for sites for these guns, and I detailed Lieutenant Otto Schwykkard as guide to these guns. I detailed Colonel Sim, R.E., to go with a fatigue party of 600 men to make the epaulements for the guns, and two relays of 600 each from regiments as reserve were ordered. Lieutenant James, R.N., arrived with the guns at about 8.30 p.m., and left with Colonel Sim about 9.30 p.m. They arrived about midnight at the foot of Spion Kop, and met the force retiring.

Lieutenant Doomer, R.A., was sent to foot of Spion Kop on night of January 23rd to report on the practicability of getting up guns, and to signal effects of artillery fire. He was on Spion Kop from 7 a.m. till 5 p.m. signalling information to Commandant Royal Artillery. He reported it impossible to get 15-pounder guns up the slopes. The naval guns could, however, have been got up readily, and could also have been used on the slopes in reply to pom-poms, etc. Attempts were made to get up machine guns without avail. Lord Dundonald offered to get up one of his machine guns during the night of 24th, and this offer I accepted; he would have done it but for the retirement.

(29.) WATER SUPPLY ON SPION KOP.

Most elaborate arrangements were made for the water supply of the troops. It would have averaged one gallon per man for the troops originally sent up.

Every pack-mule in the force was employed, 25 mules in all, and Major Sargent, Deputy Assistant Adjutant General, and Major Williams, Provost Marshal, were employed all day supervising. Everything was done that could be done, but the men were suffering from artificial thirst, due to their having just arrived in a very hot climate and having been exclusively fed on tinned meat.

Water was brought up in water-carts from the dam to the Spion Kop dépôt, and from there it was loaded up on mules in biscuit boxes. Of course, a good deal of water was spilled from the boxes, but they were the only receptacles we had. There were East India pickul bearers in the force which Sir R. Buller had at Potgieters, and they were asked for, and eventually sent, but they arrived without their pickuls.

(30.) SUPPLIES OF ALL KINDS ON SPION KOP.

Supplies of all kinds were plentiful at the foot of the hill. All the regimental supply wagons of the battalions of the 5th Division and other corps on our side engaged were congregated there in the afternoon, and the troops had exactly the same supplies available then, as they had had during the whole period of the expedition. Moreover, at 5 p.m. nearly all the 11th Brigade who had gone up during the night had come down for water and food. General Coke states the men brought down eight or ten water bottles to fill, and took them up again. There was a limited amount of water on the hill in springs, which had been developed.

(31.) SICK AND WOUNDED ON SPION KOP.

The Principal Medical Officer reported at 7.30 p.m. on 24th January that 150 wounded had been brought in, that every available stretcher of 4th, 10th, 11th Brigades had been sent, and 24 ambulances as well. The field hospital complete was at Wright's Farm, near Trichard's Drift, and the wounded were brought down to the foot of Spion Kop and transferred to ambulances.

(32.) AMMUNITION ON SPION KOP.

There was a plentiful supply of ammunition. In fact, the Dorset Regiment were employed all night in bringing it down after the retirement.

(33.) THE ABANDONMENT OF SPION KOP.

The retirement from Spion Kop is an unique episode in our military history, and seems unaccountable (taking place, as it did, at nightfall, when there were at least 10 hours of rest before dawn next day) unless the retirement of the King's Royal Rifles from the Twin Peaks may have influenced Colonel Thornycroft's proceedings.

In order that some of the misconceptions concerning Spion Kop may be cleared up, I give the following brief account:—

I had telegraphed at 11.50 a.m. to Colonel Crofton that Colonel Thornycroft was placed in command of the

summit with rank of Brigadier-General, and it was Colonel Crofton's duty to communicate to Colonel Thornycroft this order, together with my former message to him of 11.50 a.m., telling him to hold out "to the last; no surrender," and that I was sending him three battalions to support him.

That this heliograph of 11.50 a.m. was written out correctly and communicated to Colonel Crofton there can be no doubt, as it was subsequently picked up by a Boer on Spion Kop, and published in the "Daily Mail."

How it reached Colonel Thornycroft I do not know, but as Colonel Crofton continued throughout the day to command the 11th Brigade, he must have been in communication with Colonel Thornycroft at intervals. Either Colonel Crofton retained the command, or he handed it over.

Sir R. Buller states, "The officer who was placed in command on the top of the hill made several efforts to communicate his situation to General Warren, but received no reply." (Evidence, Royal Commission, 18th February, 1903.)

This is a very grave mis-statement, as I will show. At 1.25 p.m. I heliographed to Officer Commanding Spion Kop:—"Please say where Thornycroft is: has he assumed command?" Reply:—"Colonel Thornycroft is not here." At 1.35 p.m. I again said to Officer Commanding Spion Kop: "Is General Coke on Spion Kop?" It was received, but I got no reply.

At 1.40 p.m. I said to Officer Commanding Spion Kop: "Please give me your views on the situation on Spion Kop, and inform me what you can do, and if anything can be done to advance the tactical situation." It was received. At 1.50 p.m. I said to Officer Commanding Spion Kop: "What battalions have you got on Spion Kop?" At 2.15 p.m. I said to Officer Commanding Spion Kop: "Is General Coke on Spion Kop?" All these heliographs were seen by General Buller, who states that he was at the signal station, and saw all the messages I sent or received.

About 2 p.m. the sun began to be obscured, and it was difficult to send heliographs.

It seems certain that these messages must have been sent on to Officer Commanding Spion Kop, and that either Colonel Crofton or Colonel Thornycroft knew that General Coke was coming up.

At 2.30 p.m. Colonel Thornycroft wrote the only report he sent during the day, and which was a reply, I believe, to my heliogram of 1.40 p.m. This report was seen by General Coke at 3 p.m., who said on it: "I have seen the above, and have ordered the Scottish Rifles and King's Royal Rifles to reinforce. The Middlesex and Dorset Regiments and Imperial Light Infantry have also gone up. . . . We appear to be holding our own at present" (White Book, p. 27). This was received by me at 4.30 p.m., and so far there seemed to be no anxiety. At this time there were seven battalions on and about the summit.

At 3.30 p.m., or an hour before I received this report, I received a telegram from General Buller, stating there were seven battalions on Spion Kop (giving their names), and saying that Colonel Hill seemed to be in command. General Buller's remark on the tactical situation was, "We hold up to the saddle on our right."

At 3.40 I received a heliograph from General Coke, sent after he had endorsed Colonel Thornycroft's report, saying: "The hill is being cleared of the Boers; the necessary reinforcements have been sent up; Scottish Rifles just reached top, etc."

About 3.30 p.m. Colonel Sandbach, Assistant Adjutant-General to Sir R. Buller, arrived from Spion Kop on his way to Sir R. Buller, and gave a good account of affairs.

Thus the period during which I received no messages from Spion Kop was from noon to 3.40 p.m.; but I had several times communicated with Spion Kop during that time up to 2.15 p.m., so that had Colonel Thornycroft or Colonel Crofton or Colonel Hill any messages to send they would have sent them.

At about 4.30 p.m. I was making arrangements for sending the naval guns and working parties for the epaulements, and sent Captain Hanwell out to select sites for the guns on Spion Kop, and I assume that the latter reported his arrival to Colonel Thornycroft. I received no further communication from Spion Kop till about 7.30 p.m., the heliograph being not now available; but at 6.30 p.m. I sent by oil light a message to General Coke asking whether two battalions would be sufficient to keep on top of Spion Kop, saying that the others might be kept over in reserve.

After 7.30 p.m. I received General Coke's review of the situation, written at 5.30 p.m., and soon after a further report from General Coke, brought by Major Williams, taking a more cheerful view of affairs. Then I received a report from Lieutenant Winston Churchill, who had left me at about 4 p.m. for Spion Kop. I received no further communication from Colonel Thorneycroft till after he had reported the retirement to me at 2.30 a.m.

Sir R. Buller states I could not be found because I had changed my camp. My divisional wagon had been moved because it had been shelled, and a man had been severely wounded under it and a horse killed close to, but my bivouac was only changed a short distance, and the position was known at artillery headquarters. The fact is, the night was so dark from mist at times, that it was easy to lose your way, even in a few yards.

Sir R. Buller states in his evidence that I appealed to the nearest brigadier for reinforcements on Spion Kop on morning of 24th January. He had directed me to apply to General Lyttelton for any assistance from Potgieters, because General Buller was so often away from there, and I was in constant communication with General Lyttelton from 17th to 25th January. I was under the impression that Sir R. Buller had seen my telegram, and that all my telegrams to General Lyttelton were duplicated and sent to General Buller. The taking of the Twin Peaks by King's Royal Rifles by General Lyttelton was exactly what was required, and General Buller would not have done better himself.

General Buller could readily have recalled the troops General Lyttelton sent if he had wished to do so, as he was at the Signal Station looking on all the time.

At 10 a.m. I asked for assistance, and the hours at which the troops crossed the Tugela are as follow. (White Book, p. 45):—

Bethune's, 11.45 a.m.

Scottish Rifles, 12.30 p.m.

King's Royal Rifles, 1 p.m.

At 1 p.m. General Lyttelton told me what he had done, and said he would send still further assistance if occasion offer, and General Buller was looking on. It is not intelligible that for three hours he was not aware what General Lyttelton was doing, immediately under his eyes.

Unfortunately General Buller did retire the King's Royal Rifles during the afternoon. Had it not been for this I doubt if Colonel Thorneycroft would have retired from Spion Kop. It will be seen that the helio messages as follows were sent. (White Book, p. 46.)

3 p.m. "Retire steadily till further orders."

3.30 p.m. "Retire steadily till further orders."

4.50 p.m. "Unless the enemy has retired you will fall back."

6 p.m. "Retire when dark."

I would here mention that when I received notice of the retirement from Spion Kop at 2.30 a.m. on January 25th I sent off at once duplicate messages by telegraph and mounted messenger to Sir R. Buller. Our telegraph clerk could not call up the Potgieter station.

The following is the message I sent by orderly:—

"2.30 a.m., Warren, to Chief of Staff; pressing. Colonel Thorneycroft has on his own authority abandoned the position of Spion Kop, and the troops are evacuating the place; can you come on at once and decide what to do? An immediate decision must be arrived at. The line is intercepted."

Sir R. Buller received the message at 5 a.m., and arrived at my bivouac at 6 a.m.

(34.) RETIREMENT ACROSS THE TUGELA.

The abandonment of Spion Kop might have been reduced to a mere episode in our advance to the relief of Ladysmith had not Sir R. Buller committed himself to the plan of retirement, in order to try a new line of attack at Vaalkrantz, almost from the first day after our crossing.

He issued an order that there was to be no retirement, saw us well on our way across the Tugela, and then, instead of supporting us with all his vigour, he commenced to look for a new line of attack.

Had we re-occupied Spion Kop on the morning of 25th January, we should have been masters of the situation, but Sir R. Buller could think of nothing but retirement from our positions so well gained.

I had constantly brought before his notice that the Boers were getting shaken, and that the Orange Free State Boers wished to be off as early as 21st January. I pointed this out to him:—"Telegram: 'Warren to General Buller. 6.30 p.m. I am under the impression

from various indications, that the Free State Boers are preparing a great trek to the west, and that the present fighting is to secure their line of retreat. If you can push on the three battalions to reinforce me as quickly as possible, I think I can manage to close the road to the west and secure some of their wagons."

To this General Buller replied that he expected the enemy might try a counter-stroke.

I continually pointed out to Sir R. Buller up to 23rd January that the Boers were preparing to retreat, and he would not hear of it. Here is a telegram from Lord Dundonald:—"2 p.m., 22nd January. One of my patrols reports that the enemy are placing a gun on high hill just north of B. in square B. 33 of big blue map, thus protecting their line of retirement to Free State. There is also a movement to big hill in D. 33, which effectually commands all approaches towards their right flank, and further protecting their retirement."

(35.) THE RETREAT OF THE BOERS FROM SPION KOP, AND THE COMPLETE VICTORY OF OUR TROOPS ON EVENING OF 24TH JANUARY.

(1) Lieutenant Otto Schwykkard, when acting as guide to naval guns, ascended Spion Kop by moonlight, just after our troops had abandoned it, and entered the Boer lines. Here he found none but killed and wounded, except one hospital assistant; there had been a general retirement of the Boers.

(2) Colonel Burn Murdoch and a reconnoitring party ascended Spion Kop on morning of 25th January, and found it abandoned by the Boers ([Cd. 458] p. 75, Blue Book).

(3) At 9.25 a.m. 25th, telegram from Chief of Staff:—"A few Boers have been observed trying to ascend east of Spion Kop, and may commence sniping."

(4) At 2.30 p.m., 25th, telegram from General Lyttelton:—"Some Boer reports have reached me of a steady Boer movement from our left to our right, down stream. Can you judge from the pressure against you whether it is due to the Boers weakening the right?"

(5) Intelligence Report C. 32, 27th January: "Natives tell scouts that day after Spion Kop fight large numbers of Boers and wagons trekking towards Berg [westward], thus confirming our suppositions. They, however, are now returning. Natives show great disappointment at unlooked-for result of battle, after apparent victory.—(Signed) A. W. CAMPBELL, Lieutenant, R.A."

(6) The Spion Kop battle, as seen from Ladysmith (from special correspondent of "Times"?): "There was no change in the Boer positions till Wednesday, 24th." At that time the Boers had two large canvas camps near Spion Kop Nek and four large wagon laagers further north.

During the afternoon of 24th the Boers were seen inspanning, and towards evening they began trekking towards Van Reenan's Pass. On morning of Thursday, 25th, it was observed that many of the Boers had left the laagers, and that others were going in full retreat. The wagons extended for miles. On Friday morning it was observed that the Boers had re-appeared.

(7) Commandant Edwards, Staff Officer to General Botha, has stated that the Boers were all on the run on the afternoon of 24th January, and that our abandonment was a complete surprise to them. The Boer leaders held a council on evening of 24th January, and believing that the Twin Peaks (the key of the position, in their views) was still held by King's Royal Rifles, they determined to abandon the positions about Spion Kop.

(8) Some Boers who had been on Spion Kop on 24th January told my Aide-de-Camp, Lieutenant Lowther, in May, 1900, that the Boers were in full retreat from Spion Kop on evening of 24th January, and that our victory was complete.

(36.) SIR R. BULLER'S ORDERS AND HIS SUGGESTIONS.

I have to call attention to the unfair position taken up by Sir R. Buller regarding my action. Either I was responsible for what I did, or I was acting under orders; but Sir R. Buller makes my position depend upon after results.

He states that he only suggested to me putting General Woodgate in command of the attacking column, instead of General Coke. It was most distinctly an order, for he stated he would not have General Coke in command. He states that he only suggested to me putting Colonel Thorneycroft in command of Spion Kop, and yet he says, in a letter of 24th January—

Appendix M. "I have telegraphed to you to put Thorneycroft in command."

On the other hand, in respect to his suggested attack from our left, he says that I refused to carry out his instructions in not attacking there. Yet he told me to consult my generals as to doing so, and telegraphed to me at 7 p.m., 22nd January:—"If you mean to attack there, I should organise the attack thus: Shell with howitzers stop howitzers as you open machine guns from Snymburg hill, and then attack. One battalion to attack, and all to open fire on the other scances."

If I had (against my own judgment and the judgment of the generals I consulted) attacked on this occasion, and failed, is it to be supposed that Sir R. Buller would have accepted the responsibility for the action he states that he constantly urged on me?

(37.) SIR R. BULLER'S SECRET REPORTS AND CHARGES AGAINST ME.

I have to call attention to the adverse reports and charges Sir R. Buller has made against me, while (so far as I know) he was on the most friendly terms with me. He gave me no hint of any kind that he was reporting against me, and was, apparently, on such friendly terms that I often was asked by officers of other divisions to bring matters for them before him. I had myself for many years had a friendly feeling towards him, and though on several occasions after the war commenced I was warned that he was not friendly, I did not credit it, and did not realise the manner in which he had treated me, until I saw copies of the Spion Kop despatches in May, 1900, on my way to Griqualand West.

Sir R. Buller gained his information in an informal manner, and not according to the usual routine, and he did not seem to have a good knowledge of topography or any mental prospective as to the value of the various items of information he received from so many different sources. The result was that he was apt to have an incorrect and distorted view of matters, which it was difficult to correct. If the correct view could be put before him he would suddenly grasp it and treat it as if he had always known it: and sometimes I succeeded in putting a correct view before him, but, as a rule, he would not permit me to proceed with what I had to say. As an instance of the manner in which he secretly re-

ported wrong information, without informing me, I relate the following:—

On 12th February, 1900, on looking at some telegrams in Sir R. Buller's book relative to the relief of Ladysmith, which Lord Roberts wished me to see, I caught sight of a telegram from Sir R. Buller to Lord Roberts, stating that I had had an acrimonious dispute with my staff relative to Spion Kop. I called Sir R. Buller's attention to this, and requested an explanation, and he assured me that he had found he had made a mistake, and had explained to Lord Roberts that the dispute was between Colonel Thorneycroft and Colonel Hill. This instance will give you some idea of the random manner in which Sir R. Buller wrote about me, and how terribly handicapped I was in my dealings with him.

I claim that, as I was in independent command (according to all the usages of war), I should have been informed of all the statements concerning my conduct made against me, and given an opportunity at the time of replying to them. Under such a system as that adopted by Sir R. Buller the reputation of no officer was safe.

(38.) MY EMPLOYMENT IN SUBSEQUENT INDEPENDENT COMMANDS.

Sir R. Buller states: "I can never employ him again in an independent command."

Yet after Vaal Krantz, on 7th February, Sir R. Buller suddenly left the field, leaving me in independent command, to extricate the force from the position, and he sent me a very complimentary telegram on my doing so.

After Vaal Krantz I was always in command of at least three brigades up to the relief of Ladysmith, and I pushed the advance through, my command being always to the front. On the last day, (Pieters) I organised the successful advance, and commanded the whole line north of the Tugela and east of Onderbrook, while Sir R. Buller was south of the Tugela. I received several congratulatory telegrams and verbal thanks, given before my Staff, but on most days Sir R. Buller omitted to mention my name in the accounts of the actions given in his despatches.

CHARLES WARREN, Lieut.-General, R.E.

18th April, 1903.

APPENDIX A.

PASSAGE OF RIVER BY PONTON BRIDGE.

(SCHEME BY LIEUT.-COLONEL BLOMFIELD, 2ND LANCASHIRE FUSILIERS.)

(1) Till "Long Tom" is silenced nothing effective can be done. This gun is by scale 2,650 yards from the bridge, the south end of which it commands.

(2) I estimate enemy at 15,000, with 12 field guns.

(3) Our force, two divisions, with usual proportion of field artillery.

(4) I should advance two batteries to hill (B), and one to hill (A), and endeavour by cross fire concentrated on "Long Tom" to subdue its fire. As, however, the range exceeds 4,000 yards, and our artillery has, I presume, only shrapnel, it will be a difficult job. All guns to be worked by "deliberate" method.

(5) The hill (C) must next be occupied by infantry, some of whom might work on to (D) if cover be available.

(6) With (C) held as a bridge head infantry might effect a crossing, but as I anticipate that hills (E) and (F) will be held by enemy's field guns, which must also be silenced by our artillery (see 4 above), the occupation of (C) will be most difficult.

(7) Balloon reconnaissance should be freely used if balloon section Royal Engineers is with either of the divisions.

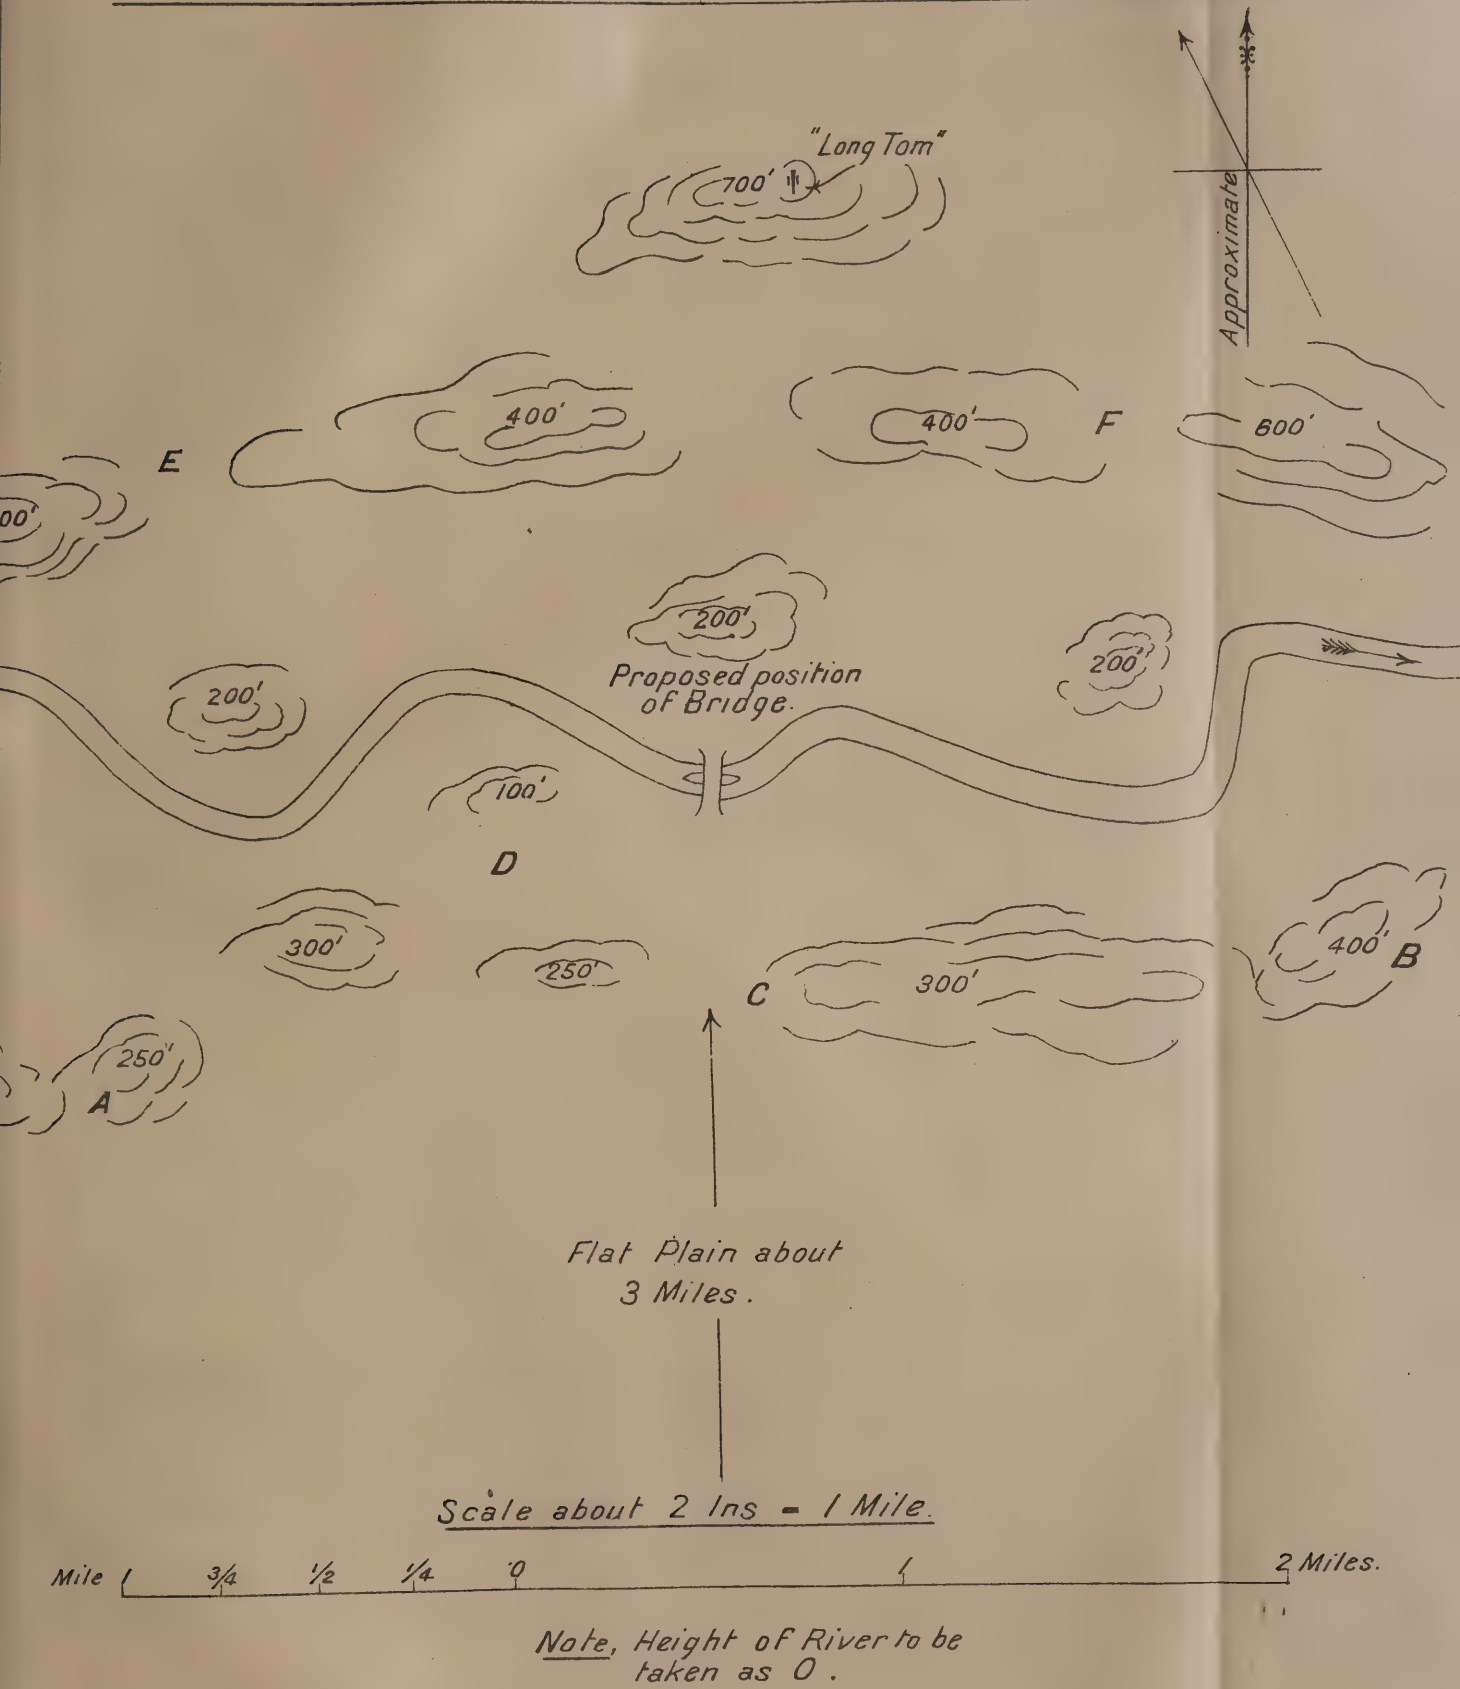

(Signed) C. BLOMFIELD, Lieut.-Colonel,
Commanding 2nd Lancashire Fusiliers.

Springfield, January 15th, 1900.

APPENDIX A.

IDEAL SKETCH.

Of passage of a River, to be accomplished by throwing over a Pontoon Bridge.

APPENDIX B.

Appendix M.

REPORT ON PROBABLE WATER SUPPLY NEAR ROAD FROM TRICHARD'S DRIFT TO GROOTE HOEK, PASSING NORTH OF SPION KOP RIDGES. REFERENCE TO D OFFICIAL MAP, SCALE 1 IN. TO 1 MILE.

(1) About one mile from the drift (No. 13) is the Englishman's house, Mr. Wright's, at present unoccupied; about a quarter of a mile beyond the house are the first lot of kraals met with; they are on both sides of the road.

Water is obtained for the house and the kraals from a donga running down into the Tugela, east of the house.

(2) About $2\frac{1}{2}$ miles from the drift the road forks; here are the second lot of kraals on both sides of the road; there is cultivation around these kraals, and they get water from a spring about a quarter of a mile east of the road.

(3) About $3\frac{1}{2}$ miles from the drift is a kraal consisting of six huts in a row; they get water from a donga a few hundred yards to the east, said to be a running stream after rains.

(4) About four miles from the drift is a kraay of two huts close to the road. They get water from the donga west of the road, which runs down past W. Coventry's house.

(5) About five miles from the drift, west of this road is the head of a donga, in which it is said there is a good spring of water.

(6) The enemy's camp at Groote Hoek have been drawing their water from the farmhouse of C. Coventry. This is said to be an uncertain supply for large bodies of troops; but spruits passing G. H. Wright's are generally running streams at this time of year.

(Signed) A. J. SANDBACH,
Assistant Adjutant-General, Intelligence.

Headquarters, Mount Alice, January 16th, 1900.

APPENDIX C.

FROM SIR R. BULLER (JANUARY 17TH, 1900, RECEIVED JANUARY 18TH.)

My dear Warren,—I am carrying coals to Newcastle probably, but on the chance I write to say I wish you would, if you have not already done so, point out to Woodgate that his advance from Smith's Farm to-day was all wrong. The one thing, if we mean to succeed, is

to keep our left clear. He was at Smith's Farm; the Yorkshires had occupied a kopje to the east, and he had advanced north-east; this was wrong. He offered his left to the enemy. I give a small diagram:—

(A) was the hill you wished to hold, and (B) looking into the kloof (C), where you thought the enemy might be. (B), of course, was properly occupied, but when Woodgate advanced, he, instead of moving up to (A), which, when (B) was occupied, he could safely do, he moved across as marked by the arrow, so that if an enemy had been behind (A) his left flank would have been exposed; this is what I want all commanders especially to avoid.

If your direct road is blocked, we must go forward by moving off to the left, and this will have the further advantage that it will keep you near the water at

Venter's Spruit—consequently the left flank must always be thrown outward. If you can make a direct advance it will be in line, but if you are checked the next advance must be by moving half left (see D); I mean that to get on, your left will creep outward and forward and your right follow. I don't know if I have made myself clear. Wynne will explain, but until you have so far encircled the enemy that you can wheel to the east, pray always try to overlap their right with your left.

(Signed) REDVERS BULLER.

Appendix M.

APPENDIX D.

COPY OF THE ORIGINAL TELEGRAM DRAFTED BY SIR CHARLES WARREN, FEBRUARY 12TH, 1900, GIVING HIS OPINION TO LORD ROBERTS AS TO WHETHER HE SHARED SIR R. BULLER'S VIEWS EXPRESSED IN TELEGRAM OF FEBRUARY 9TH.

"Commander-in-Chief (Sir R. Buller), with reference to Field Marshal Lord Roberts' question of February 11th, 1900 (C.93) as to whether I share your views in your telegram of February 9th.

"(1) This matter involves an immense number of considerations, and innumerable details in which I may not hold the same opinion as you do, but although I do not know to what extent there may be any divergence of opinion, on the main and important subject I think that my views closely accord with yours, as follows :—

"(a) In my opinion (and it is an opinion I have held since I arrived here, though not so securely based as now), the force in Natal is not sufficiently strong to effectually relieve Ladysmith (if the Boers have long-range guns well directed with good shells) *except by getting into some position* where we are able to get our artillery to pound away at the Boers in their trenches, and thus weary and worry them and kill them out.

"(b) I consider that an attack on Bloemfontein and the Orange Free State would materially assist, because after the British Government is again proclaimed the Orange Free State Boers must return to the Orange Free State, or lose their farms; at present they cannot be deprived of their farms.

"(c) I agree with *you and with Sir George White* that it would be fatal to Ladysmith merely to remain on the defensive until operations are going on against the Orange Free State. I consider that the General Officer Commanding the Natal Field Force is bound to continue actively to attack the Boers, even though he may know that he cannot effectively relieve Ladysmith, arranging, of course, that it may be done with as little loss of life as practicable.

"(d) Sir George White first stated that Ladysmith could only hold out to February 15th, but now considers that by sacrificing the horses he can hold out to March 15th. This gives us nearly a month more. I consider that 10,000 men would be more effectively employed in the Orange Free State than in Natal in giving assistance to Ladysmith; at the same time, I am of opinion that the force here is just as weak, *without a proper complement of long-range guns*, as to be able to act with difficulty. On the whole I think the most effective arrangement is for the force here (with drafts sent up to fill all vacancies) to pound away with artillery and harry and worry the Boers to the utmost, while a rapid advance is made to secure Bloemfontein and vicinity, Harrismith, and Van Reenan's Pass, and at the same time to proclaim the Orange Free State a Sovereignty, and to give out that the Orange Free State Boers must return, otherwise their farms will be confiscated.

"(e) You have shown me your papers as to taking Hlangwani Hill. I think that this will most assist Sir George White, and that if sufficient long-range guns are got up, it is possible that Ladysmith may be relieved from this side, at any rate it is worth trying. The only point I would suggest is, that the advance when the attack is made, should be made by some kind of trap, so that there may be no great loss of life, as I am confident that what the Boers dread most is to lose heavily, so long as we are only losing few."

In giving this opinion, I was only asked to state whether I shared Sir R. Buller's views given in his telegram. I was not asked whether I thought I would have relieved Ladysmith with the force we had, but only as to prospects of the force acting under Sir R. Buller.

APPENDIX N.

Appendix N.

PRÉCIS OF EVIDENCE BY MAJOR-GENERAL BARTON, C.B., C.M.G.

See Questions 16181-16395.

1.—From all circumstances governing the question, it is self-evident the British Force originally designed for the campaign, was insufficient, and ill proportioned.

In Natal, force would have been sufficient if cavalry had not been shut up in Ladysmith.

2.—Shooting of our infantry was very good, and much better than Boers.

Shooting of cavalry bad, and carbine useless.

Shooting of Reservists requires improvement.

Marching of infantry as a rule splendid, but differed in corps.

Horsemanship and horsemastership capable of improvement; the latter depends on the directors of operations and the staff as well as on the rider; waste of horses due greatly to our depending on imported horses and making insufficient effort to secure the horses of the country. As a rule horses taken from Boers suffered as much from sores and sore backs as our own.

Intrenchments and cover.—The training of our infantry in this respect was good; but officers should be assisted by manuals issued regularly by the R.E. and kept constantly up to date.

The R.E. are quite up to date themselves, and ready to do this, but it was not done.

Wallace spade is a useless encumbrance. The spade to be of any service must be large, strong, and of the best material, capable of attachment to the person on special occasions, and not carried permanently by the soldier.

The principle of taking cover should differ materially in the "attack" from the "defence"; the creeping crawling methods of attack are believed to be wrong.

General physique, morale, and intelligence of infantry on arrival were of the highest order. Chief improvement was in the men becoming more handy in camp or bivouac, and better able to take care of themselves; this is quickly learnt.

Chief deduction as regards future training is more independence for commanding officers and company leaders. Less dry nursing by Generals and staff, who are often guided by elaborate programmes, and judge by book work, rather than by results or work in the field. More stress should be laid on combined tactics, and simultaneous attacks of different bodies on several separate points.

3.—Staff officers and regimental officers should stick to their own work; at present staff duties are introduced too much into the training of regimental officers.

The first and chief point necessary to obtain a really efficient staff is to select only first-class regimental officers and to insist on the rule (without any exception whatever) that all officers under rank of Lieut.-Colonel commanding a corps must perform *bonâ fide* regimental duty after three or four years on the staff.

Company officers should be relieved of pay responsibilities.

4.—(a) Owing to paucity of A.S.C. supply officers there was mismanagement entailing enormous loss to the State.

Most of the butchering should be done by corps.

(b) Very good.

(c) No special knowledge.

(d) The number was colossal, quality varied, but there were many of the very best, although faulty staff management never gave them a chance until late in the campaign.

5.—Railway management was faulty. Much more should have been done to cope with difficulties of improving the personnel, and improving facilities for entraining troops generally throughout the lines of railway.

Though styled military railways, there was not discipline enough.

Ox transport in Natal was excellent and well organised—a very considerable inferiority was observed in Cape Colony after relief of Ladysmith.

Traction trains used very successfully in Pretoria district, but they should always be under officers specially qualified in steam.

As a general rule regimental transport should be adopted on manœuvres and active service.

The infantry are always very shabbily treated in load tables.

6.—Medical arrangements were good, but the organisation of units should not be interfered with, *e.g.*, the Fusilier Brigade was deprived of its medical services on transfer from the Natal Army to the Cape Colony side.

The R.E. were slack in the early stages, especially in the matter of water-supply. They were first-rate during later stages of campaign.

It is a question to what extent the duties of Q.M.G. are now merged in the Chief Engineer.

7.—It is doubtful whether such heavy guns as 4.7 or 6-in. are really needed in the field.

Field guns should fire common shell, as having far greater destructive power and moral effect than shrapnel. They should also be quick-firing.

Lee-Metford rifle is good, but sighting is defective in a large proportion; or the ammunition is uncertain.

Officers should be invited to bring defects to notice.

FURTHER EVIDENCE REGARDING ORGANISATION OF ARMY, ETC.

Organisation is generally approved; except as regards present system of M.I.

Advocate a permanent M.I. establishment with each battalion in excess of eight company organisation. This establishment to be under the C.O. and be used for training as many suitable men as possible.

The establishment may be from a minimum of one section—about 25 men, to a complete M.I. company of present fixed establishment for M.I.

All other M.I. to be abolished and cavalry increased. These M.I. to be utilised in battalion training, and brigade training.

They would form nucleus for rapid expansion, but would not otherwise interfere with battalion organisation and efficiency.

On service every N.C.O. who is extra regimentally employed should be at once classed as supernumerary, and his place filled up in the corps, and absorbed when he returns.

The place of officers should also be filled up much more liberally than was done during the war.

There was an enormous and unnecessary waste of men on the Line of Communications, and the practice of grabbing individual men and entire drafts was freely indulged in.

All anomalies, such as the Militia Reserve, should be abolished. Every officer and man should fill one place only in the organisation of the Army.

Cavalry should have best rifle available, which must have great range—consistent with this range it should be as light as possible provided it does not kick.

Infantry officers should be encouraged to keep horses—this only needs the provision of stabling in all infantry barracks, and permission to have soldier grooms at the discretion of C.O.

Rifle shooting and instruction should be made more popular and palatable; and penalties for men who are not first class should be provided as much as possible.

Appendix N. Musketry figures should not be published.
Carriage of ammunition by the soldier needs improvement.

There was unnecessary delay in assembling Reserves and embarkation at beginning of war—deficiency of khaki clothing was generally believed to have been the cause.

The raising of local corps for active service is so frequently resorted to, that it is time a code of very simple standing orders, suitable for all cases, should be compiled, and kept ready at all times in pamphlet form for issue to officers and men on being enrolled.

All enrolment should be for the duration of the war.

More stringent rules are necessary regarding public utterances, communications to the Press, to war correspondents, and historians. During the war the door has been thrown wide open for juniors to criticise and attack their superiors behind their backs; while the former are quite ignorant of the circumstances and instructions which have governed the actions of their superiors.

Some officers doubtless have benefited largely in their reputations by communications to the Press, etc., made by their subordinates; others have been most unjustly criticised. In either case discipline suffers.

The practice of the Navy, as regards errors or crimes committed by officers, may with advantage be adopted in the Army. At present military officers are removed from their posts, are publicly slighted and held up to opprobrium, without even being told the nature of their error; and they have absolutely no redress whatever.

While not having had much experience of Colonial corps raised for the war, there can be no doubt that the C.O. and a large proportion of the officers should be officers of the Regular Army; but the N.C.O.'s should be irregulars. This does not apply to permanent volunteer or local corps, such as the Natal Carabineers or some of the Cape mounted corps.

The breaking up of divisions and brigades was premature.

APPENDIX O.

Appendix O.

STATEMENT BY MAJOR-GENERAL BARTON, C.B., C.M.G. respecting his Action while in charge of Forces in South Africa.

(See Questions 16181—16395.)

While I was serving in Pretoria, in May, 1902, and when peace was daily expected, my attention was called to the second volume, "*Times' History of the War*," in which I am most severely criticised in regard to my action on first arrival in Natal and at the battle of Colenso.

I was unable to procure this volume, and only saw extracts therefrom; but on arrival home I personally referred the matter to the Commander-in-Chief, Lord Roberts, and claimed his protection.

I also asked that the matter might be referred to a court of inquiry, which his Lordship said was not possible.

The "*Times' History of the War*" is understood to claim special opportunities for accurate information, and is regarded generally as an authoritative publication; it bears, moreover, the stamp of official recognition, because, after an order had been published in South Africa prohibiting officers to communicate accounts of operations for public circulation, another order appeared, permitting such information to be furnished to Mr. Amery, editor of the "*Times' History*."

This permission was restricted to "personal experiences," but there is no doubt that in some cases the terms of this permission have been exceeded, even to the extent of junior officers criticising their seniors, while the former were quite ignorant of the instructions given to the latter, and imperfectly informed of the circumstances which governed their action.

On arrival at Durban, on November 17th, 1899, I was ordered at once to Mooi River Station to assemble my brigade there.

I caught the first train, and proceeded in advance of my staff, which had not yet landed.

I had no information of the situation in Natal. I did not see General Clery, when I passed through Pietermaritzburg, nor any of his staff; my written instructions were: "To watch the country, and co-operate with Hildyard at Estcourt to protect the railway line."

Beyond this no plan of campaign was communicated to me.

My battalions and staff had not been brigaded together before, and were all strange to me and to one another.

On arrival at Mooi River Station at 3 a.m., November 18th, I found 230 men, Thorneycroft's newly raised M.I., had arrived the evening before, and also the first battalion of my brigade.

There had been some confusion about the destination of this battalion, which caused it great discomfort; probably attributed to me, but for which I was in no way responsible.

Mooi River Station had every conceivable defect as a military position; it was not of my choosing, though it was necessary to have some force there to guard the important railway bridge. No preparation had been made for occupation by troops or defence, but a supply dépôt was in process of formation.

I had to make at once all my dispositions for defence of the station, bridge, and line, without knowing when the next troops would join me, as this depended on the arrival of ships, regarding which I had no information. I had no Intelligence officer or agent, no guide, local scout, interpreter, or map; and no transport at all; nor anyone possessing local or colloquial knowledge of Dutch and Kaffir languages necessary for gaining information, and no officer who possessed any previous knowledge or experience of the country. On Thorneycroft's recommendation I appointed one of his officers temporarily as Intelligence officer, etc., but the next day was warned from headquarters (Pietermaritzburg) that his loyalty was doubtful.

Immediately on my arrival at Mooi River I had applied to headquarters Pietermaritzburg for an interpreter or guide; the answer was not satisfactory. Even-

tually Mr. McFarlane, a gentleman of much colonial experience, joined me as Intelligence agent, but not till late on the night of 22nd November.

On the eastern side, towards Weenen, most of the farmers are Dutch, and they were in sympathy with the enemy.

At 10 a.m. on the morning of my arrival at Mooi River Hildyard telegraphed he was being attacked from N.W.

Mooi River is 23 miles from Estcourt, too far for active co-operation with infantry; but as I expected the Boers would try and isolate Estcourt, and as I learnt that Hildyard had a detachment at Willow Grange, I sent 500 infantry by rail and 100 M.I. by road to permanently occupy Highlands, promising to send another 500 on arrival of next battalion.

These two intermediate posts would have protected the line and ensured my maintaining communication with Hildyard, would have formed points d'appui for our very small bodies of M.I. patrolling the line and country; and Highlands would have served as a jumping-off ground for any operations I might undertake to the north as soon as I was sufficiently equipped to take the field; a most useful point, seeing I had no maps to work with, and no knowledge of the locality.

Further, the occupation of these two posts would have prevented the concentration on the Highlands plateau of the two Boer forces which were now moving south of Estcourt by Weenen on the east and the Hlatikulu Mountains on the west; estimated at about 7,000 men all splendidly mounted.

The following day (viz., November 19th) I was ordered to withdraw the infantry from Highlands and patrol the line with mounted men. I therefore withdrew the infantry on November 19th, but left the 100 M.I. at Highlands, with orders to scout, but to fall back if outnumbered or in danger of being cut off.

I do not question the wisdom of my superiors, but these changes of plan give a bad impression, and also cause to a commander considerable doubt as to the extent of his independence.

On November 19th 500 men of Bethune's M.I. reached Mooi River en route for Estcourt, and I urged that they should remain under my command, because I was responsible for sending trains of men, horses, guns, and stores to Estcourt, where there were already about 300 mounted men, all possessing local knowledge and experience.

In this I was overruled, and I recognised that General Clery wished to make Hildyard as strong and mobile as possible, his force being at the rail head, and better able to engage the Boers than mine, which was very incomplete and not mobile.

Hildyard also withdrew his detachment from Willow Grange, and on November 21st the Boers drove in our M.I., formed a junction on the Highlands plateau, and they cut the line and telegraph, thus isolating Estcourt and stopping communication between Hildyard and myself.

At this time (viz., on November 20th) I heard that a large supply dépôt had been formed at Nottingham Road (south of Mooi River), and was entirely unguarded; as the enemy were reported to be moving south on my western flank, I sent 500 infantry by rail unobserved during the night back to occupy Nottingham Road, and 100 M.I. by road to Rosetta.

Boer scouts approached Nottingham Road the next morning, but, finding it occupied, they withdrew. I protected these places till arrival of the next Brigade.

These places were not in my sphere of responsibility, but I considered it necessary to act as I did, and also I contemplated having to operate to the south, as there were no troops between me and the sea.

I did not co-operate with Hildyard in his fight near Willow Grange on November 23rd, for which I have been blamed, because I had no knowledge of his inten-

Appendix O. tion, owing to delay in the delivery of a note he sent me by native messenger. The scene of his fight was about 18 or 19 miles from me; he attacked at daylight, and I did not receive his note till 10.30 a.m. the same day, by which hour he had retired towards Estcourt.

I made a full report of the whole circumstance at the time.

On receiving Hildyard's note I prepared a column to reconnoitre in his direction; but, as it was starting, I received a message from Headquarters (Pietermaritzburg) that Eland's Kop, south of Mooi River, and completely covering the railway, was occupied by the Boers. This being partly confirmed, I felt compelled to divert the column towards Eland's Kop. The report, however, proved to be incorrect.

The Boers had long-range guns that they were able to put in positions which I was at that time not strong enough to occupy, but from which, at a range of from four to five miles, they were able to drop some shells into Mooi River Station on November 22nd and 23rd; though they did no damage. On both occasions I moved out and engaged the enemy, but my guns were quite outclassed.

I received the following messages from Headquarters (Pietermaritzburg):—

From A.A.G., Pietermaritzburg, to G.O.C, Mooi River:—

November 23rd, B 83. Your 74. I hope to send you a regiment of cavalry (Royal Dragoons) about Monday next. (Stop.) The two remaining battalions of your brigade will probably (*sic*) with you to-day. (Stop.) Don't run any risk about your camp. (Stop.) If those fellows in your front stay there much longer we may bag the whole lot. (Stop.) Will send you the first mounted troops that arrive.

From General Clery to G.O.C. Mooi River. B. 103, November 24th:—

Your 88. I will probably send you two long-range guns to-day. (Stop.) I hear from Nottingham Road that patrol of Rifle Association reports as follows:—

"Considerable force of Boers moving from Simon's Farm Camp to Highlands about 4 p.m." Message ends. Can your scouts confirm this?

Be careful for a day or two how you risk too much.

These messages speak for themselves. I therefore sent a secret note by messenger to Hildyard to say I would operate in his direction on Wednesday, November 28th, by which time I expected to be able to take the field with a mobile force, and by combined action to attack the Boers with advantage, and under circumstances that if I gained any success, I could follow it up.

On November 24th the two last battalions of my brigade arrived. On November 25th, at about noon, the Boers on the Highlands plateau were reported by my scouts to be moving eastward. I reconnoitred with a column of two battalions, one field battery and 250 M.I., when there appeared no doubt the enemy were retiring on Weenen, intending to cross the Bushman River by bridge there, and then make for the bridge over the Tugela at Colenso.

Believing I had very little prospect of interfering with the Boer retirement through the difficult thorn country in the Weenen district, I sent the above column through under Lord Dundonald during the night to Estcourt (23 miles), notifying Hildyard by mounted messengers the line the Boers were taking, that my reinforcement would reach him at daybreak, and might enable him to move out in force to intercept the enemy before reaching Colenso, as he was much nearer to the enemy's line of retreat than I was. I added that I would bring the rest of my brigade to Estcourt the next day, as Lyttelton had now reached Mooi River with two battalions. Hildyard moved out from Estcourt with his whole force on arrival of my column, and tried to intercept the Boers.

I kept the remainder of my brigade back because a force of Boers was still reported on the western flank, and it was necessary to watch it, and also to repair the line and telegraph. This was effected during the night, and a train pushed through to Estcourt at daylight on November 26th; but as I was on the point of marching with the remainder of my force, I was stopped by orders from Pietermaritzburg. Later in the day I received orders to march to Estcourt, which I reached on November 27th.

The guns referred to in telegram No. 88 arrived early on November 25th. The cavalry regiment did not reach me at all.

The transport of my brigade was delivered partly at Mooi River, but not completed till I had been 10 days at Estcourt.

The Boers gained no military advantage beyond the capture of some stock, which they could not have been prevented from seizing in other parts of Natal at that time; I claim that my attitude at Mooi river checked the progress of the enemy further south, and there is nothing to show that any other action on my part, during the week I was there, would have had better results.

The difficulties I experienced at first were to some extent inseparable from the opening of a campaign in a strange country, where the enemy already possessed great advantages before I arrived. I have never complained of such difficulties, which I did my best to meet as they occurred, nor do I question the wisdom of the orders sent to me, or changes in my dispositions, but I protest most emphatically against the criticism which is levelled at me alone; also that an attitude of caution enjoined on me, and changes forced on me, which might be attributed to my vacillation, should have led to my being publicly accused of being "decidedly nervous and chiefly concerned in the defence of the station and bridge at Mooi River." And I consider I was entitled to the support of my superiors.

BATTLE OF COLENZO.

I have also been publicly blamed for not supporting Dundonald in the capture of Hlangwane, and it is ascribed to my fearing to take responsibility. My brigade was detailed as a support, or, more correctly, as a reserve, and I was ordered to take it to a particular spot pointed out on a sketch plan of the country.

The object of sending a mounted force to occupy Hlangwane was that it might be done quickly, so as to cover and assist the advance of Hart and Hildyard across the river. I have reason to believe that Buller thought Hlangwane was not held by the Boers, or I think he would have made other dispositions for its capture.

I had no report or message from Dundonald, and did not know he was being seriously opposed.

After Hart had been repulsed and Hildyard's attack stopped, I rode over to a battalion of my brigade that I had sent, in accordance with my instructions, to cover our right flank; I found it about two miles on the right, with Dundonald's battery, which had no other escort, and I then observed that the occupation of Hlangwane had failed. While there, Dundonald came up and asked me to support his further advance on Hlangwane.

I saw the situation for myself, and it was a question whether the attack should be renewed; if so, it needed fresh dispositions, which it was not in my power to make.

I had already disposed a considerable part of my Brigade for the protection of Long's field guns, which had ceased fire, and of Ogilvy's long-range naval guns, which were then in action. Although it was not possible to withdraw the field guns then, I had rendered them secure against capture.

In regard to the occupation of Hlangwane, nothing could now be gained by haste; it was not an occasion when immediate action on my part could gain an advantage or avert a disaster.

I am also prepared to give my reasons for considering entirely fresh dispositions necessary if the attack was to be renewed.

Nothing had been ascertained of the strength or positions of the Boers south of the Tugela, nor of their means of reinforcing or withdrawing their men.

It was a question whether Buller wished to hold the hill of Hlangwane permanently; and under every rule and principle of war it was my duty to refer to him before committing any part of my infantry brigade to offensive action at such a distance, namely, about five miles, from the place assigned to it by Buller himself.

There would be no difficulty in ascertaining his wishes quickly by heliograph or messenger.

At this time I saw Buller crossing the plain towards us; he observed the situation for himself, and then, far from wishing me to move on towards Hlangwane, he blamed me for having brought one of my battalions so far to the right, and he ordered me to retire it nearer to the place he had appointed for my brigade.

I did so, leaving three companies with Dundonald.

At this time Buller was intent on the withdrawal of Long's field guns.

The following evening, at 6 p.m., Buller sent for me and had a long conversation with me about the battle. He again said I had taken one of my battalions too far to the right, but added I was quite right not to support Dundonald further in a venture that could then gain no result.

I never heard the incident referred to again until March or April, 1902.

I am most anxious and desirous that the fullest publicity may be given to the part actually played by myself and my brigade at Colenso, and am ready to give full information and proof of every act and incident that came under my observation. I never made any secret of Dundonald's request and my refusal. I referred to the incident in my official report, furnished the next day. I have not been blamed by my official superiors, but attacked behind my back on information possibly given to the Press by those who did not know the circumstances or had other ends to serve.

TACTICS.

On 27th February, 1900, when my brigade attacked the left of the Boer position at Pieter's Hill, we failed to obtain the full success deserved, because the two brigades I was told would attack simultaneously with me, did not do so. By this the Boers were able to reinforce their left, and attacked me on three sides, besides bringing guns and pom-poms to bear on my brigade, and I had no artillery to reply with.

It caused serious and unnecessary loss; the whole position was not captured till dusk; and, although this success effected the relief of Ladysmith, the Boers were able to break up their camps, remove guns, etc.; and escape during the night, thus evading pursuit.

Hence I favour simultaneous attacks on two or more points of an extended position, though all need not be pressed home at the same time.

In the action at Rooibdam on 5th May, 1900, when I commanded the attacking force, the Boer position was on a very extended ridge, strongly fortified by stone breastworks, and I had only two battalions for the attack, aided by two squadrons of Imperial Yeomanry with two guns R.H.A., under Colonel Meyrick, that did excellent service by containing and occupying the attention of the Boers on the right flank of their position, while I first captured a commanding feature on the Boer left; then finding the position too strong on that flank, I held the Boers in front, and advanced from my left, and completely turned all the Boer defences.

In the final advance every man of my force was in the firing line. It is solely and entirely due to this most successful and decisive engagement, of a small British force against a carefully prepared position, strongly held by Boer forces specially intended to block the road to Mafeking, that Colonel Mahon's flying column was enabled to make a long start unmolested, and eventually to effect the relief of Mafeking; and I am aware there is considerable disappointment among the troops engaged at Rooibdam, at the comparatively slight notice or recognition of the service performed, especially so as its importance was thoroughly recognised and acknowledged by the Boers themselves.

The chief lesson of the first Boer war of 1881 was that, where small forces are opposing one another, mounted men armed with rifles can always surround infantry, and this was frequently exemplified during the late war, especially so when De Wet attacked me at Frederickstad, and gathered all the local commandos to his help.

Just keeping his men out of rifle range, he was able to shell me with six guns, whatever positions I took up, until at last he gave me a chance by advancing a detachment in the night, which entrenched itself about a mile from my outposts, leaving their horses another mile back, in the bed of a river.

Failing to move them by artillery fire, I attacked with infantry across the open plain, and on this occasion had convincing proof that the Boer is not such a good shot in action as he is represented. I am positive, if the tables had been turned, the Boers would never have reached the trenches they were holding.

The action ended in the first serious defeat experienced by General C. De Wet, and resulted in the restoration of British prestige at Pochefstroom, where De Wet had made inflammatory speeches, boasted of capturing my force, and urged the whole district to renew fighting and carry on the war to the bitter end.

SURRENDER OF BURGHERS.

In regard to the surrender of burghers after the capture of Pretoria, I was at Lichtenberg at the time, and we did not at first promise protection to Boers who surrendered; but surrendered burghers began to arrive from Pretoria, and they had received passes in Pretoria, promising them protection; we had therefore to conform.

I never had any faith in the success of the oath or declaration of neutrality, because all the leaders kept aloof from us; and, as the Boers are singularly amenable to and influenced by their leaders, I felt convinced that the scheme could not have any lasting success, quite apart from the question of protection, which we were not in a position to afford.

CONCENTRATION CAMPS.

In my opinion concentration camps were an absolute necessity from the Kaffir question alone, if for no other reason.

As early as May, 1900, during my advance in the Western Transvaal, when all the burghers were on commando, I was earnestly appealed to by terrified Boer women to protect them against armed bands of Kaffirs, who were scouring the country, terrorising, stripping, robbing, and committing outrages towards Boer women.

I did everything in my power to protect the burgher families, sent mounted men in all directions, and succeeded for the time in completely ridding the district of these Kaffirs, whom I arrested. In some cases armed Kaffirs who opposed my troops and resisted capture had to be shot.

After the capture of Pretoria, the surrendered burghers returned to their farms, and the Kaffir difficulty ceased; but when the Boers again took up arms and went on commando, the women and children were again exposed to persecution, and no one recognised this more than the burghers themselves.

For instance, on one occasion a commandant, with my permission, sent his father-in-law, his wife, and sister into my lines for protection, but they arrived in a wagon driven by his adjutant; as this man's identity was proved to me, I arrested the adjutant for coming in without my authority and disguised as a driver; for he wanted to return with the wagon to the commando.

The commandant claimed his release, indignantly protesting that he could not let these women travel across the veldt at the mercy of a Kaffir driver.

G. BARTON, M.-G.

APPENDIX P.

PRECIS OF EVIDENCE BY MAJOR-GENERAL SIR CHARLES KNOX, K.C.B., LATE COMMANDING THIRTEENTH BRIGADE, SIXTH DIVISION, SOUTH AFRICAN FIELD FORCE; NOW COMMANDING FOURTH DIVISION, SECOND ARMY CORPS.

(See Questions 17549-17768.)

1. In my opinion, at no time during the war was the strength of the forces employed by us sufficient for the work we had to do, nor was the proportion of mounted men suitable to the country.

My reasons for these statements are:—

At the commencement of the war Lord Methuen on the Orange River Kimberley line had not a force sufficient to relieve Kimberley, principally owing to his lack of mounted men.

At the same period in Natal, it is a well-known fact that Sir George White and Sir Redvers Buller were quite unable to cope with the enemy's forces.

Later on in the war, at the time of Lord Roberts' advance from Bloemfontein to Pretoria, and, I might almost say, up to the end of the war, we had at no time a sufficient number of men to make our occupation effective.

After Lord Roberts' first proclamation from Bloemfontein, the whole of the southern part of the Orange River Colony had accepted his terms, and if sufficient protection had been given them by our troops the Boers would have remained loyal. The same applies to the portion of the Orange River Colony west of the railway line as far north as the Vaal.

The universal complaint of the inhabitants was that they were unable to observe neutrality without the protection of our troops.

Putting aside this question, which was, I consider, the chief cause of the prolongation of the war, the proportion of the mounted troops was quite inadequate.

We had to deal with an enemy who were all mounted. We were operating in a country quite unsuited to progression on foot; therefore the infantry soldier was quite out of place, except to guard the lines of communication and occupy the towns.

2. I consider the shooting of the Regulars, compared with that of the Boers, was about equal if they had been shooting at targets on a range. The difference was, the Boer shot with his head, the British soldier by regulation.

With regard to the Auxiliary Forces—

Volunteer, Infantry, same as Regulars.

Militia, fair.

Yeomanry, first batch fair, second batch indifferent to bad.

The marching qualities of both Regulars and Auxiliary Forces was all that could be desired. I do not think that any European nation could put in the field a better body of marching men than our Sixth Division.

Regular Cavalry and Artillery, good.

Mounted Infantry, indifferent; a large body of infantry were mounted at the last minute at Orange River who had no idea of riding nor even of saddling a horse.

Yeomanry, first batch good, second most indifferent.

With regard to horsemanship, with the exception of the Royal Artillery, all branches were indifferent. I attribute this to our training. The system we adopt is to train a man to ride a horse, but to omit altogether to teach him how to keep that horse in such a state of health and strength that the utmost can be got out of him. It is much like teaching a man to ride a bicycle, or to drive a motor-car, without at the same time thoroughly instructing him in the manner of repairing and keeping his mount in order.

The recognised system we have always trained on as regards mounted infantry was that their horses were only means of conveying them from point to point, and the style of horsemanship was nothing, whereas it makes a very great difference to a horse whether his rider sits like a sack of oats or distributes his weight in a proper manner. I consider horsemanship is an art untaught in our Army.

Our training indifferent.

"The Wallace Spade Equipment," which was the

recognised equipment, was useless, and was never even used in training at home. Battalion carts should carry proper intrenching tools.

The infantry soldier was, during his training, generally allotted a field near the barracks in which to dig intrenchments; hence both officers and men had a very small idea how cover should be provided by intrenchments, suitable to the ground on which they were required to operate. They learnt a lot from the Boers on this matter.

These latter remarks equally apply to cover.

Very good in all respects, as was proved by the great amount of work men went through, often under very trying circumstances.

Undoubtedly a marked improvement was shown as time went on—the weaker ones being weeded out by sickness or death.

The Reservists who went out at the beginning of the campaign were far superior to the drafts of young soldiers which arrived from England later on, and with regard to these latter it is not easy to make a comparison, as there was less marching to be done, and their duties were lighter. But this does not apply to cavalry drafts, who were always good.

Artillery.—I consider the artillery should be left alone—no improvement except in guns and harness can be made to a corps whose system is an example to any army.

Cavalry.—The cavalry require a great deal more training, especially the officers. A few brilliant cavalry leaders have no doubt been found during the war, but what a number of failures.

The reason of all this is that it is impossible to train cavalry in England. It is almost impossible to lay down a proper standard of training which can be carried out on the ground available. If it were so, I am convinced that the officers are only too anxious to improve their branch. They have done the best with the facilities at their disposal.

Infantry.—I consider our infantry a splendid body of men. The Boers I know looked upon our artillery and infantry as magnificent. There is no question that there is not much individuality in the infantry soldier—a most desirable quality, no doubt—but not so necessary in infantry, which works in denser formations, as in mounted troops.

The only means of training men to have individuality is by teaching them scouting in its proper sense, i.e., observation, tracking, etc., but a man on foot would seldom be employed for this kind of work. The training of cavalry and mounted infantry should mainly consist of this sort of work.

I would suggest, first, to fix on a standard to which it is desired to train all the troops in their different rôles. In doing so be sure that the ground is in every way suitable and adapted to the instruction. Then I am confident the British officer will loyally carry out his duty.

If there has been any fault in the training of our officers or men, it has not been the fault of the former. Courses of instruction have been laid down, and they have been adhered to; the fault—which we have learnt by experience—has been that our methods and standards of military education have not always been those which are required in warfare.

A great deal of this has been proved by our want of knowledge in the striking difference in tactics brought about by modern arms.

It is the custom to abuse and find fault with the Regular officer, but he has only acted under the directions of the heads of our Army, and I say again, first determine what sort of education is necessary, both for officer and soldier, and then the officers may be relied on to carry it out.

3. My remarks in the previous paragraph will answer the training of regimental officers.

As regards Staff officers, their training is deficient for work in the field; their duties in time of peace confine them too much to their offices.

In matters of routine they are carefully trained, but in the field their ideas are cramped—they are slow, often very bad riders, and worst of all, they are often deficient in common sense, and unable to give an opinion on any strategical or tactical problems. They want more training away from the confined area of the Staff College.

4. (a) During the war the method and sufficiency of supply in the field was admirable.

(b) The quality of the supplies good.

(c) I am not aware of any delay on the part of contractors.

(d) I am quite unable to give the number of horses. Their quality was good, but they were never given a chance of being acclimatised in depôts, as they should have been, and as they were during the latter part of the war. They were taken straight from board ship, and often, within a fortnight, doing 30-mile patrols. Also, there were no depôts into which tired horses could be sent to recuperate—they were ridden to a finish.

The Remount Depôt was bad, and this, taken in conjunction with the indifferent horsemanship of mounted infantry and colonials, was responsible for the enormous wastage in horseflesh during the war.

5. The strength of the Army Service Corps is insufficient. Conductors and drivers of all sorts should be trained. We had to depend on colonial conductors, who were not always a success.

An easy means of expansion of this corps to a war footing—according to nature of the country to be employed in—should be considered.

6. The Medical and Engineer Services were, in my opinion, good, but I think that means of easy expansion of both these services should be considered during peace time.

7. No doubt the Artillery have come to the conclusion that our guns are not all they should be. My own experience has only been with 15-pounder, 12-pounder, and pom-poms. I consider the 12-pounder an absolutely useless gun, but the 15-pounder and pom-pom are decidedly good.

The Lee-Metford is an excellent rifle, and the Boers—who at the end of the war were altogether armed with this rifle—preferred it to the Mauser, but they liked the clip with which the Mauser is loaded better than our magazine system. In this I concur.

With regard to the concluding paragraphs of the Memorandum I cannot say much.

I consider the proportion of mounted troops to dismounted in our Army quite inadequate. Appendix P.

A large force of mounted infantry should be trained, even if not always kept up. It appears to me absolutely certain—under the conditions of modern warfare—that the army which has the largest number of mobile troops and the longest-ranged big guns will have an enormous advantage, and the nation which can first find out means of transporting riflemen quickly will have the same superiority as the Prussians had with the breech-loader against the muzzle-loader in the 1864 campaign against Denmark, and 1866 against Austria.

There is no question that what enabled the Boers to stand against us both at the commencement and at the end of the war was their superior mobility.

My idea is to train an enormous force of mounted infantry, but not necessary during peace, to keep up a mounted establishment.

What struck me most during the war, when I was in charge of a brigade marching through the north-west of the Orange River Colony, was how utterly useless infantry, marching 14 or 15 miles a day, were against an enemy moving at least 30 miles a day.

To summarise the whole, I say train cavalry better in scouting, riding, and shooting, abolish any idea of shock tactics, and, consequently, do away with the lance.

Train masses of mounted infantry in scouting, shooting, and horsemanship.

Give our Artillery better guns, improve the team harness, and increase the number of spare horses.

Improve the equipment of our infantry with a view to lighten the man's burden.

Try and make him more self-reliant, not always depending on his officer for directions.

Improve his shooting in field practices and snap-shooting, and try to teach him to shoot with his brains, and not according to the book.

If it were possible to give infantry a course of deer-stalking it would be the sort of training at which I would aim.

Make the Army Service Corps, Engineers, and all Departmental Corps capable of easy expansion in time of war, suitable to the country in which they would be required to operate.

Finally, and most important of all, establish an Intelligence Corps, in order that every division of the Army on taking the field would have properly-qualified officers attached to them, who would be responsible for obtaining guides and all necessary information from the inhabitants of the country.

The marked failure in this department during the commencement of the South African War was most regrettable.

APPENDIX Q.

PRECIS OF EVIDENCE BY MAJOR-GENERAL SIR LESLIE RUNDLE, K.C.B., K.C.M.G., D.S.O.

(See Questions 17,852-17,944.)

The work given me by Lord Roberts up to the fall of Pretoria was to prevent any large body of the enemy being able to invade the south-eastern portion of the Orange Free State, whilst he himself advanced from Bloemfontein on Pretoria. I attach copy of my orders marked A and B.

To accomplish this I took up a line from Ficksburg to Winburg, and carried out these instructions until ordered after Prinsloo's surrender to the north-eastern portion of the Free State.

1. The troops placed at my disposal proved fully adequate, viz. :—

Eighth Division, about 9,000.

Colonial Division, about 1,500.

Yeomanry, about 800.

The work of the Division is recorded in the Diary, of which, I understand, the Commission has copies.

2. My Division was principally composed of Reservists—and their quality was excellent; no finer troops could have been put in the field.

Shooting Capabilities.—Shooting was fair, and improved in the first few months considerably. Want of practice in judging distance, both on the part of officers and men, was, in my opinion, the cause of much of the bad shooting, also the deceptive nature of the country and the clearness of the atmosphere.

Marching.—Excellent. The men responded to every appeal made to them; one battalion marched 45 miles in 48 hours, and fought a successful action at the end.

Horsemanship.—Generally excellent, especially in the first lot of Yeomanry.

Horsemastership.—Indifferent, and up to the end of the war it was almost impossible to get men to get off the horses when halted.

Entrenchment and Cover.—I attach a copy of my views (C) as sent to my C.R.E. on 13th June, 1900, and his views (D), in which I generally concur.

General Physique, Morale, and Intelligence.—All excellent, especially the morale. The physique improved with the open air life. The intelligence was good, but required developing.

3. *Training and Duties.*—Is summed up in the word decentralisation, with delegation of authority to inferiors, and defined responsibility combined with efficient supervision by superiors without unnecessary interference.

4. *Supplies, etc.*—I attach a report (E.) from my D.A.A.G.B., from which it will be seen the Division under my command practically lived on the country and collected its own transport, overcoming certain difficulties in so doing. The men, in many instances, felt the hardship owing to not having been trained to cook their own food and being at the start dependent on the company cooks. Eventually they suffered little or no hardships, and learnt to shift for themselves.

Quality of Supplies.—Excellent.

Ammunition.—I do not think that this most difficult matter can be met in a better way than at present, i.e., by the ammunition carriers bringing up the ammunition in canvas bags from the small arms ammunition cart, and mules.

Equipment.—The equipment was bad, the valises were packed on board ship according to regulation, for active

service. When landed were ordered to be left behind. The pouch system of carrying ammunition was bad, many rounds were lost, and the pouches pressed uncomfortably on the men's stomachs. The great coats were good. The helmets were bad, and men could not shoot with them. The hard felt hat finally issued was good. Water bottles good, haversacks not strong enough. The putties were excellent; in my opinion, far better than any legging. The boots, shirts, and socks were good. The coat (warm British) is excellent, but I look upon it as a luxury, and if it is put in competition with the great coat is not half so good.

Horses.—The Division and Yeomanry remounted itself under arrangements made by me from Basutoland, where a hardy class of pony well suited for mounted infantry was obtained in exchange for captured cattle. We were always well mounted.

5. *Land Transport.*—Both ox and mule of excellent quality and well adapted to the work required of them. There was a considerable deficiency of water-carts and ammunition carts, which at first was much felt.

I had no experience of the railway or traction trains.

6. *Adequacy of Medical Services.*—I was short of a Field Hospital, but, speaking generally, the Medical Corps was overworked and undermanned, thus taking men from the firing line to do the work.

The organisation was good, and the greater the strain the better the medical officers came out of it.

Engineer Services.—Vide attached report of my C.R.E. (D).

7. *The Effectiveness of the Guns, Rifles, and other Armament Used.*—Effective, but the tendency is to expect more from fire than experience teaches us actually takes place. The Boers seldom or never presented a target for Artillery fire; when they did, the result was disastrous for them.

LESLIE RUNDLE,
Major-General.

Dover, 7th March, 1903.

A.

This refers to instructions C in C of 14th April, 1900,
351

sent to Sir Herbert Chermiside, which had following note on it:—

Copy of above is forwarded to Lieut.-General Sir L. Rundle for his information. As I explained to him personally yesterday, Lieut.-General Rundle will have under his orders the Eighth Division and a force of Imperial Yeomanry, of which the strength has not yet been decided. He is intended to operate from De Wets Dorp to the North or North-East, according to circumstances, but he will eventually occupy and control the country from De Wets Dorp and Ladybrand up towards Senekal, or, possibly, to Bethlehem.

(Signed) ROBERTS, Field Marshal,
Commanding-in-Chief in South Africa.

Bloemfontein, April, 1900.

Strictly Confidential.

Appendix Q

Strictly Confidential.

To Lieut.-General Sir H. M. L. RUNDLE, K.C.B., C.M.G.,
D.S.O.

Brandfort, 4th May, 1900.

Dear Rundle,—

Before I move further, I think it is desirable to place you in possession of my general intentions for our advance north.

It seems clear, from what has happened in the past, that if the enemy get an opportunity, they will again at once invade the south-eastern portion of the Orange Free State. By doing so, they would, strategically speaking, have the best chance of injuring us, and should they succeed in getting a footing there, our lines of communications would be materially threatened. It would cause great consternation in Cape Colony, and it would be necessary for me to send back troops from the front, which would materially interfere with my plan of campaign.

Under these circumstances I look to you to take such measures as you may consider necessary to prevent any large body of the enemy being able once more to invest Wepener, or to move towards Smithfield through the Dewetsdorp-Wepener gap.

As soon as it can be arranged, Chermside, with the headquarters of the Third Division, will proceed to Bloemfontein, and he will have under his especial charge the line of railway from Bethulie and Norval's Pont up to this point.

It will be your duty to exercise a vigilant control to the east of the railway and prevent the enemy from gaining a footing there.

My belief is that, as we move north, the Boers will find it necessary to withdraw the whole of their troops now in front of Thabanchu, and also the small bodies now roving about the country south of Dewetsdorp.

As soon as you are satisfied that they have withdrawn in the manner I anticipate, you should move such a portion of your force as you think necessary to Ladybrand.

With Thabanchu and Ladybrand occupied in sufficient strength, with Dewetsdorp, Wepener, and Smithfield properly garrisoned, with the people disarmed, and their horses taken from them—a measure which is now being thoroughly carried out—the Boers will be quite unable to move down south, and even if they do get there, they will find no armed and mounted burghers to assist them.

I regret to hear that Hamilton has taken on one of your field batteries, but if it can be possibly arranged, the battery shall be returned to you, either before we reach Kroonstadt, or immediately afterwards.

We are now working north on two lines. Hamilton on the east is moving direct to Winberg. He has with him the following force:—

Broadwood's Brigade of Cavalry.
2nd Brigade of Mounted Infantry.
19th Brigade of the 9th Division, and the
21st Brigade.

Following him, and sufficiently near to support him, if necessary, is Colville with the Highland Brigade.

I have with me the 1st Brigade of Mounted Infantry, and the 7th and 11th Divisions, and hope later on to be joined by French and his cavalry.

To-morrow we shall reach the Vet River, and on Sunday Smaldeel Junction, at the same time that Hamilton reaches Winburg. Both forces will then move north towards Kroonstadt. I hope no time will be lost in getting there, but I fear that our progress will necessarily be slow as we must repair the railway as we move along to replenish our supplies.

Please keep me fully informed of what goes on. You have a most important task to perform, and I feel sure I may rely upon you to carry out with energy and ability the responsible duty I have assigned to you.

Please acknowledge the receipt of this letter.

Believe me,

Yours very truly,

(Signed) ROBERTS, F.M.

C.

Memorandum.

Colonel Ryder-Main,
C.R.E. 8th Division,
Commanding at Ficksburg.

According to telegrams I have received from Lieut.-General Kelly-Kenny, who has assumed command of all troops he can communicate with, it is quite possible that a crisis has arrived in the present war; it is essential that I should have a portion of my force mobile; this can only be done by making the posts, which I have left, secure and defensible from a modern point of view; for this reason I deputed to you the duty at Ladybrand and Thabanchu of organising the defences of those places.

I take it for granted that Ladybrand and Thabanchu are in a position to stand a siege, that the defences are so constructed that they will give protection against modern guns, and that they are capable of making a prolonged defence. I now wish you to do the same at Ficksburg and Willow Farm, and when these are completed to proceed to Hammonia, and place it in a state of defence in accordance with the instructions issued by the F. M. Commanding-in-Chief (C. of S. Circular Memorandum No. 17, "Instructions for Officers Commanding Posts in the Orange Free State"). After you have done this you will report to me through the C.S.O.

I may add that up to date I have failed to see any intelligent use made of entrenchments by Brigadiers or by the troops under their command; they appear to think that a few stones hastily gathered together or 6 ins. of earth hastily scraped up at haphazard is adequate protection against modern guns and rifle fire; they possess in their commands educated officers, who in passing for promotion, Staff College, and other courses prescribed by the Regulations, must have been taught theoretically very differently from the practical outcome of their work in the field.

I feel sure that the defences you have organised at Ladybrand and Thabanchu will not come under the criticisms I have felt it necessary to make as regards other positions.

I am sending a copy of this Memorandum to Brigadiers with directions that your orders on the subject are to be considered as coming from myself.

(2) The quality of the men of the Regular and Auxiliary Forces in respect of entrenchments and cover.

British troops have a curious antipathy to forming entrenchments and cover. Whether this arises from a sense of bravado, or from an idea that the use of the spade is degrading, it is impossible to say, but its presence was very evident in the late war.

This view was undoubtedly to a great extent shared in and fostered by the officers, who though knowing the immense superiority that entrenchments would, at times, have thrown into their hands, would for days occupy a position of doubtful strength without any attempt to entrench themselves, unless they were distinctly ordered to do so. This was true of the Infantry, but specially true of the mounted forces.

(At Ladybrand, in 1900, it was only by strong measures that I could get the officers and men to entrench at all, and again in September, 1900, when I inspected the positions at Harrismith, which had been occupied for a fortnight by the Guards, little or nothing of artificial cover had been attempted.)

British officers quite understand the details of field entrenchments, but seem quite paralysed in considering the "tactical" uses of field works. An officer commanding a regiment would prefer to listen to a young subaltern of Engineers as to the disposition of his troops when once entrenchments entered into the question, rather than depend on his own decisions. The selection of the keypoints of a position, or of mutually defending posts, or the falling back (if driven in) to a final impregnable rallying point seemed never to enter his mind—a question he would at once have solved if he had not been called on to entrench. To entrench troops he looks upon as a Royal Engineer job of a secret and uncanny nature.

My experience was that Infantry officers were very loath to entrench, but when once they commenced they overdid the whole thing, quite forgot the offensive role, bunched their men altogether at one point, and literally dug them into the ground. In fact, they did not understand the "tactical" use of fieldworks.

The men were quite capable of entrenching, but were, as a rule, unskilled in the use of full-sized tools. Neither officers nor men seemed to grasp the immensely increased value of concealment in connection with cover in these days of smokeless powder, and the siting of trenches selected by Infantry officers was often very defective in this respect.

Suggestions.

The field training of Infantry should embrace something beyond the details of fieldworks. A project for the defence of a position should be worked out by the officers, calculated on the men, tools, and time available, and committed to paper, and a portion, if possible, executed.

The regimental tool-cart must be promoted from its usual position in the baggage train and travel with the S.A.A. carts, and commanding officers must be as zealous of the care of the tools, and of their being kept to the front, as they are of the ammunition.

(6) The Adequacy of the Engineer Services.

The 5th Company Royal Engineers was the last Divisional Field Company that went to South Africa. It was formed mainly of recruits and Section "D" Reservists, and had only one officer who had previously served with a Field Company. In these circumstances it was in no way fit to take the field when it landed in South Africa early in April, 1900. After six months in the veldt, however, it was able to give a very good account of itself, but it started at an immense disadvantage.

The Royal Engineer officers were quite up to any work they had to do (except perhaps as horsemasters), and were highly complimented by the Brigadiers and others who came in intimate touch with them. They never shirked responsibility, and with considerable self-confidence carried out their duties faithfully and well. I have received many expressions of thankfulness from commanding officers and others as to the great help the Royal Engineer officers were to them; I do not think you can better them as a class. I think, too, that the men, when once licked into shape, were good field engineers, as good as any European army could turn out. I consider the existing proportion of Engineers to an Infantry Division quite adequate, but I think that a Field Company should be more easily subdivided into half companies, so that each brigade could have a half company working with it, and the sections of the company should also be easily detached, so as to go with small columns.

The 5th Company worked in separate sections under separate subalterns during a great portion of 1900, and many important tools and appliances were only allotted to the Headquarters Section.

As regards material, I do not like the present tool-carts. They are difficult to pack and unpack on the march. Kits and cooking utensils cannot be packed on them without burying the tools, and consequently a separate cart is required for these latter, and with our single carts the poles all broke on the first day out. The pontoons attached to the company were more trouble than they were worth. Pack transport should be provided for carrying tools for work on the line of march and in hilly country. A simple tool with a bent handle suitable for use as a spade or shovel should replace the present universal shovel. The stock of bar and wrought iron carried with a company is too small

for South Africa. Crowbars are of more use than picks and shovels in that country.

The tools belonging to a Field Company should be as sacred as the guns of a Field Battery, and on no account should a Field Company be called upon to carry and issue tools to other units, and so usurp the duties of the A.O.D.

(Signed) T. RYDER-MAIN, Colonel.

G. E. Harley, Colonel, late C.S.O. Eighth Division.

E.

Private and Confidential.

Colonel HARLEY,

Late Chief Staff Officer,

Eighth Division.

Sir,—I have the honour to submit, in default of any documentary evidence, with the exception of the appended copy of a telegram from the Chief of Staff, South Africa, a report on the "B" Services of the Eighth Division of the South African Field Force, compiled entirely from memory and my recollections of the official records, which should be in the custody of the officer who has charge of the Eighth Division Office records.

Report.

The position of affairs when the Eighth Division reached Springfontein, and was hurried forward to Edenburg in hot haste to the relief of Wepener, was as follows:—

Our transport consisted of a telegram from the Chief of Staff, informing the General that a transport company would be at his disposal on arrival at Edenburg.

The ambulance consisted of two spring civilian wagons. Many of the regiments had no ammunition carts, whilst almost every unit was deficient in water-carts, and incomplete in 1st Line Transport.

On arrival at Edenburg some battalions had not even a blanket per man.

Of the promised mule and ox transport notified awaiting us at Edenburg only some twenty donkey wagons and some fifty ox, under Captain Courtney, A.S.C., were finally available. The donkey transport, being only a local levy, was entirely inadequate to meet the very smallest requirements of the Force. It was at this crisis, however, that some 100 wagons, ox and mule, under Captain Ward, A.S.C., passing through Springfontein were assigned to the Division, and enabled it to make towards Wepener in accordance with Commander-in-Chief's urgent instructions.

The appropriation of this transport, which, from the Chief of Staff's telegram, was understood to be identical with what was stated to be at the disposal of the G.O.C. Eighth Division, was the subject of a censure, as it subsequently transpired that this particular train was to form part of the personal operations of Lord Roberts, and that, so far, no transport except the donkey wagons was available for the urgent forward movement of the Division of some 10,000 men.

With the transport thus acquired the Division moved on, being joined by General Brabazon and his Division of Imperial Yeomanry, whose plight as regards train was almost as necessitous. On reaching Dewetsdorp the scanty mule transport of the Division was depleted by the Yeomanry, who pushed forward in the direction of Wepener, drawing on the Eighth Division almost to the last mule, as the mobility of the mounted troops could not be hampered with the slow progress of the ox train.

In these early stages of the Seventh Division, when it reached Reddersburg, it was evident to all that with such limited transport but few days' rations could be carried, and, although the rations of meat and flour were not reduced, the grocery rations had for a day or two to be slightly diminished, until the Third Division, who we then met, relieved the pressure of the moment. Whilst, at the same time, our transport made several return trips to Edenburg, and with full wagons enabled us to move on Dewetsdorp.

See attached telegram to C.O.S. from G.O.C., Eighth Division.

I think at or near this town the Division came under the temporary command of General French, whose own necessities and seniority enabled him to put the Eighth Division on half rations and to take the Field Telegraph Section, and I believe the two 5-inch guns which were to accompany General Rundle.

The action of General French was further endorsed by the Chief of Staff whose telegram stating "that the Eighth Division could not be fed," and must live on the country," was filed in the "B" Office, Eighth Division, a copy of which I attach.

This simple solution of supply was thus pursued, and from Thabanchu when General French's Division parted until General Rundle reached Harrismith, with the exception of some hazardous convoys of wagons to Winburg from Senekal and Hammonia, Bloemfontein, Standerton, the Division was almost entirely self-found and supporting.

During this phase of the operations the situation would have, in my opinion, become desperate, had not General Rundle made a move from Eden on the Leew River Mills, the flour from which supplied many weeks full bread rations to the troops. A similar resort at Hammonia Mills furnished fresh supplies, and these again General Rundle augmented by fresh drafts from Winburg, Ficksburg, and drawn from Basutoland by previous arrangements, and the supply supplemented by the formation of parties to requisition the inhabitants. Such measures enabled the Division to be sustained on the full rations of meat and flour, although the grocery ration in many instances was not possible to always issue in full.

Captain Ward, A.S.C., the Senior A.S.C. Officer, had during the initial advance of the Division collected considerable transport, both ox and mule, for which Colonel Wickham, Indian Commissariat Department, whose mission from headquarters was to provide and

organise and report upon, found he had only to fulfil the latter duty, and to receive the thanks of the Director of Transport for his strenuous efforts in accomplishing so much. Appendix

The arrival of the Division at Harrismith after being divorced from a railhead or base for nearly eight months showed, I believe, a less death rate and higher health report than corresponding divisions whose fidelity to a railway had never been destroyed.—I have the honour to be, Sir, your obedient servant,

Bloemfontein, S.T., 1322, 30th April, 1900.—Message commences—"Chief considers you should be able to collect sufficient local produce to feed your Division, and that you should only require groceries. He desires that every effort be made by your Supply Officers to effect this purpose."

From Director of Supplies.

Appendix R.

APPENDIX R.

DESPATCH FROM LIEUT.-COLONEL R. G. KEKEWICH.

MILITARY OPERATIONS IN THE VICINITY OF KIMBERLEY, from September 13, 1899, to February 15, 1900.

(Handed in at Question 21853.)

War Office, May 8, 1900.*

The following despatch has been received from Field-Marshal Lord Roberts, V.C., G.C.B., etc., Commanding-in-Chief, South Africa:—

Army Headquarters, South Africa,
Government House, Bloemfontein,
20th March, 1900.

My Lord,

I have the honour to submit for your Lordship's information a despatch dated 15th February, 1900, from Lieutenant-Colonel R. G. Kekewich, Commanding in Griqualand West and Bechuanaland, describing the military operations in the vicinity of Kimberley, from the 13th September, 1899, to the 15th February, 1900, and the defence of the town up to the latter date, when its relief was effected by the Cavalry Division, under Lieutenant-General French.

2. The casualties during the period above referred to, together with those on the 16th February, appear to have amounted to 2 officers killed and 12 wounded, and 34 non-commissioned officers and men killed and 97 wounded. In addition, 4 Europeans and 1 native of the civil community were killed, and 16 Europeans and 8 natives wounded during the bombardment.

3. I am of opinion that the greatest credit is due to Lieutenant-Colonel Kekewich for the able dispositions which he made for the defence of Kimberley, an un-walled town spread over a wide area; for his rapid organisation of an auxiliary force which, in conjunction with the Regular troops, enabled him to keep the enemy in check; and for the tact, judgment and resolution which he displayed throughout the siege. I confidently recommend this officer to the favourable consideration of Her Majesty's Government.

4. I am further of opinion that the services of the officers and men of the Regular, Colonial, Volunteer and Irregular forces, and of the Town Guard, whose names Lieutenant-Colonel Kekewich has brought to special notice, are deserving of recognition.

5. I would add that the citizens of Kimberley, conspicuous among whom were the Right Honourable C. J. Rhodes, Mr. H. A. Oliver, the Mayor, and Mr. R. H. Henderson, the Ex-Mayor, seem to have rendered most valuable assistance. These gentlemen, in common with the others mentioned by Lieutenant-Colonel Kekewich, helped to maintain order among the civil inhabitants, encouraged them to hold out to the last, regulated the issue of food, attended to the sick and wounded, and co-operated generally with the Military Commander. By the active part which he took in raising the Kimberley Light Horse, and in providing horses for all the mounted troops in Kimberley, Mr. Rhodes in particular contributed materially to the successful defence of the place.—I have, etc.,

ROBERTS, Field-Marshal,
Commanding-in-Chief, South Africa.

From Lieutenant-Colonel R. G. Kekewich, Commanding Griqualand West and Bechuanaland, to the Chief of Staff, South Africa.

Kimberley,
15th February, 1900.

SIR,

I have the honour to submit the following report concerning the military operations which have recently taken place in Griqualand West and Bechuanaland.

2. On my arrival in Kimberley on the morning of 13th September, 1899, I met the following Imperial Officers who had been detailed for special services on the western frontier of the Orange Free State, viz.:—

Captain and Brevet Major H. S. Turner, Royal Highlanders, Staff Officer, Kimberley.

Captain W. A. J. O'Meara, Royal Engineers, Intelligence Officer, Kimberley.

Lieutenant D. S. MacInnes, Royal Engineers, detailed for special duties in connection with Royal Engineer services.

3. These Officers had been employed for several weeks in Kimberley and the adjacent country; in consequence many questions relating to the defence of Kimberley and the eastern frontiers of Bechuanaland and Griqualand West had been already investigated by them and were submitted for my consideration. For political and other reasons no immediate steps could be taken by me in connection with the preparations for the defence of Kimberley.

Captain H. V. Gorle, Army Service Corps, arrived in Kimberley on 20th September, 1899, and at once took up all questions relating to supplies and transport.

4. At this time the defence of the Cape Government railway from the Orange River railway bridge northwards was in the hands of the Cape Government, and a certain number of important points on the railway, and also the larger railway bridges north of Kimberley were being guarded by small detachments of the Cape Police.

5. On the date of my arrival in Kimberley, portions of the Burgher forces of the South African Republic were already out on "commando" along the Bechuanaland border. Many reports having been received that not only disloyalists in Cape Colony, but also certain Burghers of the Orange Free State had expressed a determination to destroy the Orange River and Modder River railway bridges, I arranged on 15th September with Commissioner M. B. Robinson, Cape Police, for small Police guards at the two bridges referred to.

6. On the 20th September, the following Imperial troops arrived in Kimberley:—

23rd Company, Royal Garrison Artillery (Western Division) with 6—7-pr. R.M.L. guns (3 officers and 90 non-commissioned officers and men).

One Section, 7th Field Company, Royal Engineers (1 officer and 50 non-commissioned officers and men).

Head-quarters and 4 companies, 1st Bn. Loyal North Lancashire Regiment (9 officers and 413 non-commissioned officers and men).

Detachment, Army Service Corps (5 non-commissioned officers and men).

Detachment, Royal Army Medical Corps (1 officer and 5 non-commissioned officers and men).

On the 26th September, a detachment of Mounted Infantry, 1st Bn. Loyal North Lancashire Regiment (1 officer and 21 non-commissioned officers and men), also arrived in Kimberley.

7. The Volunteer force in Vryburg (5 officers and 56 non-commissioned officers and men) was called out on the 24th September, and was subsequently placed under the command of the late Assistant Commissioner H. T. Scott, Cape Police, who was in military command of that town.

The Volunteer force in Kimberley (composed as under) was called out on the 4th October:—

1 Battery Diamond Fields Artillery with 6—7-pr. field guns (3 officers and 90 non-commissioned officers and men).

* Appeared in the "London Gazette" of 8 May 1900.

Diamond Fields Horse (6 officers and 142 non-commissioned officers and men).

Kimberley Regiment (14 officers and 285 non-commissioned officers and men).

Every effort was made to increase the numbers of this Volunteer force and to provide horses for the mounted portion thereof. 84 recruits and nearly all the horses required were obtained in the seven days following the mobilization of this force.

8. As the movement of the Burgher forces of the Orange Free State reported to be taking place opposite the Griqualand West frontier of the Cape Colony indicated that an attack on Kimberley might be made without any warning at an early date, the construction of certain important portions of the defence works of Kimberley was commenced on the 18th September.

9. It was on the 27th September that the earliest reliable information was obtained that the Burghers of the Orange Free State had been ordered out on commando. On this date Captain W. A. J. O'Meara, Royal Engineers, had proceeded to Boshof, Orange Free State, on duty. As soon as he reached that village detachments of the Burgher force of the Orange Free State also commenced to arrive there. As detachments of armed Burghers continued to arrive in the village throughout the night of 27th—28th September, Captain O'Meara left Boshof at 6 a.m. on the 28th September, and immediately returned to Kimberley and reported what he had observed.

10. There being now little doubt as to the intentions of the Government of the Orange Free State, the construction of the defence works required for the protection of Kimberley and Beaconsfield was pushed on with the utmost rapidity under the direction of Lieutenant D. S. MacInnes, Royal Engineers.

11. His Excellency the High Commissioner had authorised the formation of the Kimberley and Beaconsfield Town Guards, and on the 30th September the scheme which had been prepared in Kimberley for these organisations was brought into operation, and by the 7th October 1,156 combatant members had been enrolled. Non-commissioned officers of the 1st Bn. Loyal North Lancashire Regiment were detailed to afford the necessary instruction in the use of the arms issued and to teach a few simple drill movements to the members of these Town Guards.

12. Since the 28th September the Burgher forces of the Orange Free State and the South African Republic had been gradually approaching our borders, and on the 4th October advance bodies of the enemy were within 12 miles of Kimberley.

13. The Cape Police force guarding the railway had been augmented to 446 officers and men, and by the 1st October a concentration of this force at the most important points along the railway between the Vaal River and Mafeking had been effected as follows:—

Kraaipan (70 officers and men).

Vryburg (112 officers and men).

Taungs (89 officers and men).

Fourteen Streams (175 officers and men with 2-7-pr. field guns).

It was not till the 13th October that the Cape Police Force (District No. 2) was placed under my orders for employment in the defence of the Colony.

14. By the 7th October the arrangements for the defence of Kimberley were so advanced that the town was practically safe against any attempt on the part of the enemy to suddenly rush it.

15. On the 10th October, I sanctioned the movement of the Police at Kraaipan to Mafeking. This detachment arrived at the latter place on the morning of Wednesday, the 11th October.

16. The first act of overt-hostility on the part of the enemy occurred at Kraaipan, the railway siding at this point was occupied by the enemy on the 12th October, and at 3 p.m. On that day the Boers interrupted all telegraphic communication north of Kraaipan. During the same evening an armoured train (under the command of Lieutenant Nesbitt) conveying two guns and artillery ammunition from Vryburg to Mafeking was brought to a standstill south of Kraaipan Siding owing to the destruction of the railway at that point. Lieu-

tenant Nesbitt engaged the enemy with the small force at his disposal during the night of 12th October and the following morning. The armoured train was, however, completely wrecked by the enemy's artillery fire. The engine driver of the pilot engine which preceded the armoured train escaped, but of the men composing the British force some fell into the hands of the enemy and others were killed. I have not received any official report (giving details) of what occurred on this occasion.

17. Several attempts were made to communicate with Mafeking by despatch riders from Kimberley. The Europeans employed were, however, captured by the enemy, and the natives similarly employed returned to Kimberley at different times, having failed in their efforts to reach Mafeking.

18. On the evening of the 14th October, the enemy crossed the frontier into Griqualand West and commenced the destruction of the Cape Government railway and telegraph. Telegraphic communication north of Kimberley ceased at 9 p.m. 14th October, and at 10.45 p.m. on the same evening all the telegraph wires south of Kimberley were entirely interrupted. A despatch service was at once inaugurated, and the first messenger left for the Orange River railway bridge the same evening.

19. At 3 a.m., 15th October an armoured train (under the command of 2nd Lieutenant A. McC. Webster, 1st Bn. Loyal North Lancashire Regiment) was directed to proceed southwards and locate the spot where our telegraph line had been destroyed. On reaching Spytfontein Railway Station the train was fired upon by the enemy's guns posted in the rocky hills (kopjes) south-east of the station. The enemy's fire was returned by our machine guns, but as the enemy had three guns in position 2nd Lieutenant Webster took the station-master of Spytfontein, his family, and also some railway gangers on board the armoured train, and returned to Kimberley without having sustained any damage or loss.

20. Since direct telegraphic communication with Headquarters, Cape Town, was completely interrupted and could not be restored for some time to come, I proclaimed martial law in Kimberley at noon on the 15th October.

21. On the 16th October I learnt that Fourteen Streams railway bridge had been abandoned on the previous evening by the Police Detachment detailed for its defence, and that this force was retiring on Kimberley. The Police Detachment at Taungs had been ordered to fall back on Fourteen Streams on the 14th October, and was doing so at this time. On the 17th October it was reported that the Police Detachment detailed for the defence of Vryburg had also abandoned that place at 4.30 p.m. on the 15th October, and was also retiring on Kimberley. The members of the Volunteer Force at Vryburg dispersed to their homes on the evening of the 15th October. In fact, on the evening of the 15th October, the Police Detachments, which had been placed along the railway from Vryburg southwards, were all retiring, and by 5 p.m. on the 22nd October they had arrived safely in Kimberley.

22. The want of mounted troops to operate against the enemy investing Kimberley was greatly felt during the first few days of the investment. His Excellency the High Commissioner had given me authority (in a conversation held on the telegraph wire on the 13th October) to raise an irregular mounted corps; in consequence, steps were taken to increase the numbers of the mounted men, and also to increase the mobility of the artillery in Kimberley. The Right Hon. C. J. Rhodes, and also the De Beers Consolidated Mines, Limited, came most generously to my assistance in the matter of providing horses and mules.

23. On the 19th October Captain and Brevet Major H. S. Turner was appointed by me to the command of all the mounted corps in Kimberley, and the raising of the Kimberley Light Horse was also entrusted to him. On this date Lieutenant D. S. MacInnes, Royal Engineers, took over the duties of Staff Officer, Kimberley.

24. The rapid increase in the numbers and the mobility of the mounted troops in Kimberley which now took place made it possible for me to send out reconnoitring parties at frequent intervals in every direction in this neighbourhood. The armoured train was sent out in support of the mounted troops whenever possible. The enemy's fire was drawn on almost every occasion that our troops sallied out beyond the line of our defences.

Appendix R.

25. During the period referred to in the last paragraph small bodies (numbering from 100 to 250 men) of the enemy were busily engaged marching into and demanding the surrender of undefended towns and villages in Griqualand West. In some instances the Government officials, the members of the police force, and even unoffending traders in the towns, villages, etc., occupied by the Boers were made prisoners; on these occasions all Government property and much private property of British subjects was "commandeered" (i.e. forcibly seized) by the Boers. It was further reported to me that proclamations had been issued by Her Majesty's enemies, declaring Bechuanaland a province of the South African Republic, and Griqualand West, similarly, a province of the Orange Free State. On receipt of this information, I issued a counter-proclamation, in order, if possible, to check the spread of a rebellion in the above-named territories.

26. On the 24th October a strong reconnoitring party was sent northwards from Kimberley, with the armoured train in support, and came into collision with a force of the enemy (estimated at 800 men) near Macfarlane Siding, and it became necessary to reinforce the mounted men with guns and infantry. The enemy was repulsed, and the Boer commander himself killed. This engagement has been made the subject of a separate despatch. No authentic information has been obtained of the loss of the enemy's forces suffered in this engagement, but natives report that many Boers were killed and wounded.

27. On the 25th October the enemy began to tighten his line of investment; his position nearest to our defences was on this date about 6,000 yards south of the Premier Mine. This position of the enemy being an isolated one, it was carefully reconnoitred on several occasions, and the fact ascertained that two guns were posted behind some entrenchments thrown up in a naturally strong position. On the 31st October, the enemy opened fire with these guns as well as with rifles on a mounted reconnoitring party sent eastward from the Premier Mine by me; no one was hit.

28. On the 1st November a body of the enemy which was known to be at Riverton Road Station drew nearer to Kimberley and occupied Macfarlane Farm. At 2.5 p.m. on this date an explosion was heard, and a column of smoke was seen ascending near Dronfield Siding (about 7 miles north of Kimberley). It was believed at the time that the enemy had destroyed the whole of the dynamite stored in the magazines in that neighbourhood.

29. Early on the morning of the 3rd November the enemy made a determined attempt to drive off our live stock grazing north of Kenilworth, and opened fire on our mounted troops guarding same both with artillery and rifle. During this engagement, Major W. E. Ayliff, Cape Police, was wounded in the neck with a rifle bullet. Again, on the afternoon of the same day, another body made a second advance on Kimberley from Peddiefontein, a farm $3\frac{1}{2}$ miles west of Kimberley. Both these attacks were driven back by the mounted troops under Brevet-Major (local Lieutenant-Colonel) H. S. Turner, assisted by the guns of the Royal Garrison Artillery and the Diamond Fields Artillery. During the afternoon's engagement Private J. Lubbe, Kimberley Light Horse, was killed, and Sergeant F. E. Watermeyer, Cape Police, was wounded. The enemy did not succeed in driving away any cattle from Kenilworth in the morning, but during the afternoon the Boers were more successful, and captured several head of cattle which their owners had allowed to stray too far from our defences on the north-west of Kimberley. The enemy's losses on this day were not ascertained.

30. About noon on the 4th November, Head Commandant C. J. Wessels, of the Burgher forces, Orange Free State, sent in a "parlementaire" demanding the surrender of Kimberley.

31. At 7 p.m., 6th November, the enemy fired two shells at our defences at the Premier Mine; the first regular bombardment of Kimberley, however, did not commence until 5.30 a.m., 7th November. On the latter date, the enemy commenced shelling the section of our defences between the Kimberley Waterworks Reservoir and the Sanatorium (the majority of the shells being apparently intended for the latter building). The enemy appeared to have three guns in position along the ridge south-west of Wimbledon rifle ranges. On the 7th November, the enemy also shelled our position at

the Premier Mine from their position south of the same. Although the enemy's shells fell in close proximity to our defence works south of Kimberley and at the Premier Mine, no one was injured and practically no damage was done. On this date the enemy fired at the extreme limit of range of his artillery.

32. On 8th November I issued a proclamation withdrawing all arms and ammunition in the possession of the civil population. In this manner the possibility of active hostile acts being committed against the enemy by irresponsible non-combatants was prevented, and at the same time many disloyal British subjects in Kimberley, who were reported to be in communication with the enemy, were disarmed.

33. After the bombardment of 7th November it became evident that the enemy was not satisfied with his artillery positions on the ridge west of the Wimbledon rifle range.

During the three following days the enemy's artillery did not fire a single shell against our defences, but there were many indications that new positions were being prepared by the enemy for his guns.

34. My general plan for the defence of Kimberley was based on the principle of always keeping the enemy on the move and constantly in fear of attack from an unexpected quarter.

Later, when the advance of the Relief Column from the Orange River commenced, and I was put in possession of information concerning the probable date of its arrival at Kimberley, I adopted such measures as I hoped would cause the retention of a large force of the enemy in my immediate neighbourhood, and thus enable the Relief Column to deal with the Boer force in detail. It was with these objects that the numerous sorties and demonstrations in force were made by portions of the garrison of Kimberley.

It will be observed that portions of the mounted corps were employed on every occasion. The work which fell on the detachment 1st Bn. Loyal North Lancashire Regiment, Cape Police, Diamond Fields Horse and Kimberley Light Horse, and the Diamond Fields Artillery was in consequence very arduous; not only did the corps mentioned respond cheerfully, but nothing can exceed the bravery and dash with which these troops attacked the enemy on several occasions in his entrenched positions.

35. It will be realised that, under the peculiar circumstances in which the defence of the scattered town, containing over 40,000 inhabitants and much valuable machinery, was entrusted in the first instance to a force, consisting of about 570 Imperial troops and 630 Colonial troops, my efforts would have been of no avail had it not been for the valuable assistance and advice which many citizens afforded me in a military as well as a civil capacity. Where so many are concerned, I find it impossible to bring to notice by name every individual who has thus assisted me.

36. On the outbreak of war, with an enemy in numbers superior to those under my command, and also possessing great mobility, it was unfortunately an unavoidable situation that a large portion of British territory should have been overrun by the enemy. I felt great sympathy for those British subjects who were compelled to suffer many indignities at the hands of the enemy in consequence of the undefended state of the neighbourhood in which they were residing. But in the matter of affording protection to these British subjects, as well as in that concerning the defence of the Modder River railway bridge, I was most anxious that no disposition of troops made by me should give the enemy a chance of scoring a first success, even where the smallest body of British troops might be concerned. Taking into consideration that the enemy would probably not regulate his movements in accordance with the dictates of sound strategy, that he was in possession of mobile artillery in my immediate neighbourhood (and of this I had reliable information), I felt convinced that if I had detached a small body of troops (necessarily without artillery) which it was not in my power to support from Kimberley, the enemy would in all probability concentrate very superior numbers, with artillery, against the small British post, and endeavour to destroy the troops composing the same. It was principally for this reason that I determined to concentrate all my available forces, including the Cape Police, who had retired from their defence posts along the railway at the point of greatest

importance in my command, viz., Kimberley. In the case of the Cape Police, I was further influenced by my opinion that only under the leadership of Imperial officers could this body be utilised as a useful defensive force, since the officers of the Cape Police, from the very nature of their ordinary duties in times of peace, could not possess sufficient military experience to be entrusted with independent commands in outlying districts.

37. I wish to record my high appreciation of the conduct and behaviour of the Regular and Colonial forces employed in the defence of Kimberley: but I would more particularly call attention to the great patriotism displayed by the citizens of Kimberley and Beaconsfield, who so willingly and spontaneously undertook obligations of a military nature at a time of great emergency by enrolling themselves in the Kimberley Light Horse and the Town Guards of Kimberley and Beaconsfield. The cheerful spirit in which the members of these forces obeyed all military orders was most commendable.

38. I further wish to place on record the brilliant services of the late Brevet Major (local Lieutenant-Colonel) H. S. Turner. In him the Army has lost a most valuable officer: he was a great organiser, full of energy, and possessed of real ability and courage. A better all round officer I have never met. He was the principal organiser of the Town Guards, and acted as my Staff Officer, carrying out his duties with marked success under great difficulties, until he took over the organisation and command of the Kimberley Light Horse and the mounted troops. He commanded the mounted troops in numerous reconnaissances and sorties in the neighbourhood of Kimberley, and I cannot speak too highly of the manner in which he conducted them and loyally carried out my orders. His horse was shot

under him on the 25th November and he himself was wounded, but continued to perform his duties until killed in action on the 28th November. Appendix R

39. I beg to bring the officers of my Staff most especially to notice, and I trust that their valuable services will be rewarded:—

Captain (local Major) W. A. J. O'Meara, Royal Engineers, my Intelligence Officer, carried out his many duties to my entire satisfaction and was of the greatest assistance to me. He has professional acquirements and ability of a high order, and is, I consider, a most hard-working and capable Staff Officer. The arrangements connected with despatch riders, the careful watching of spies, the censorship of telegrams and the Press, and the collection of information under most difficult circumstances were most carefully and intelligently arranged by him. He also successfully carried out the duties of Director of Army Telegraphs in Kimberley. I cannot praise his good work too highly.

Lieutenant (local Captain) D. S. MacInnes, Royal Engineers, worked out most carefully and constructed with marked ability and success the engineer operations for the defence of Kimberley. He is a real hard worker, full of zeal, energy and resource. Wherever he went he inspired confidence. On Brevet-Major Turner taking over the command of the mounted troops, Captain MacInnes relieved him as my Staff Officer, and I cannot speak too highly of the manner in which he carried out his heavy and very responsible duties, both within the fortress and in connection with sorties, reconnaissances, etc.—I have, etc.,

R. G. KEKEWICH,

(Lieutenant-Colonel Commanding Griqualand West and Bechuanaland.)

Note.—The Report also contained honourable mention of a number of officers which it is not considered necessary reprint here.—*B. H. Holland*, Secretary.

Note.—When a Series of Questions refer to the same Subject the Number of the opening Question only is given.

INDEX ACCORDING TO WITNESSES.

(The INDEX ACCORDING TO SUBJECTS will be found at the end of the Report Volume.)

ADYE, LIEUT.-COL. JOHN, C.B., R.A., late Assistant Adjutant-General for Colonial Forces, South Africa. (See Questions 12,205-12,373.)

Services of witness in South Africa, 12,206, 12,293, 12,298, 12,321, 12,328.

Officers of Colonial Forces :

Commanding Officer and Adjutant, provision from Regular Army advocated, 12,238, 12,299.
Establishment, regulations as to advocated, 12,237.
Handbook of Instructions for, suggestion as to issue of, 12,291.
Inspector - General, appointment advocated, 12,292, 12,315.

Over-sea Colonials :

Disbandment, 12,357.
Discipline, 12,249, 12,367.
Equipment, 12,352.
Horses, 12,353.
Officers, 12,241, 12,360, 12,369.
Pay, 12,317, 12,323, 12,339, 12,365.
Quality of men, 12,303.
Strength of, 12,215.

Pay of Irregular Colonial Forces, suggestions as to :

Appointment of Paymaster, 12,365.
Uniform rate of, 12,265, 12,305, 12,327, 12,343.

Scheme for raising Irregular Corps, desirability of, 12,287.

South African Corps, raising and organisation of, 12,214.

Classification of, 12,222, 12,332.
Disbandment, 12,280.
Discharge of men in the field, 12,256, 12,312, 12,356.
Discipline, 12,249, 12,354, 12,368.
Equipment, 12,223, 12,248.
Establishment, regulations as to, 12,237.
Medical tests, 12,230, 12,314.
Officers, 12,239, 12,368, 12,371.
Pay, 12,262, 12,276, 12,339.
Period of Service, terms of enlistment, 12,232.
Quality of men :
Discipline, 12,249, 12,368.
Horsemastership, 12,254.
Recruiting, system adopted, 12,227.
Riding tests, 12,229.
Strength of Corps, 12,214, 12,320, 12,334.
Training, 12,231, 12,245.
Volunteer Forces in Cape Colony and Natal 12,218.
Disembodiment, 12,281.

ALTHAM, COLONEL E. A., C.M.G., Assistant Quarter-master-General, Intelligence Division. (See Questions 458-689 and 14,688-14,962.)

Service of Witness at home and in South Africa, 458, 544.

Artillery, 614.

Boer military strength and armaments, information as to, 497, 577, 584, 588, 599, 610, 639.

Colonial Forces, proposals for organisation of, 537.
Mounted men, decision as to, 602.

Field Intelligence Department, organisation of, 543.

White, Sir George, organisation under, 545, 682.

Altham, Colonel E. A.—continued.

Intelligence Department :

Cost of estimate of, 630.
Duties of, 486, 616, 635.
Memorandum submitted by, 472, 548, 577, 603, 688.
"Military Notes," preparation of, 491.
Staff of, 558, 562, 581, 603, 630.

Ladysmith :

Reasons for selecting as a station and holding, 654.

Relief Force :

Communications by heliograph between Sir R. Buller and Sir G. White during fights, 14,879.

Line of advance, suggestions as to, 14,867, 14,871.

Offensive operations in aid of General Buller, Field Force Order as to, 14,881.

Lombard's Kop, retreat from, 14,835.

Number of troops which would have been necessary in 1899 to protect British territories in South Africa from invasion, 649.

Schemes of defence :

General schemes of defence and offence, 472, 474, 555, 560, 565, 624.

South Africa, defence in, 472, 483, 525, 591, 649, 673.

Topographical information as to South Africa, 511.

AMERY, MR. L. S. (See Questions 20,416-20,560.)

Sent out by the "Times" to South Africa in August, 1899, 20,416.

Experiences in South Africa, 20,416, 20,429.

Army Organisation :

Army Corps scheme of 1901 :

Staff officers, proposals as to, 20,500, 20,509.

Cavalry, use of, in modern warfare, 20,533.

Efficiency and numbers of the Army, 20,536.

Mounted infantry, use of, in modern warfare, 20,524.

Proportion of Army to be trained as mounted infantry, 20,527, 20,530.

Attack and defence, relative advantages of, under modern conditions, 20,535.

Boers :

Horses, 20,518, 20,519.

Numbers in the field, 20,421.

Supplies, equipment, and transport on outbreak of the war, 20,426.

Telegraph system, 20,455, 20,462.

Use of ground, advantages gained by, 20,535.

Cavalry :

Retreat from Lombard's Kop, 20,440.

Use of, in modern warfare, 20,533.

Germany :

Staff officers, training, 20,497, 20,502.

Horses :

Quality of, 20,518.

Training for war, suggestion as to, 20,518, 20,521.

Intelligence Department in the Field :

Inadequacy as to numbers, quality, and expenditure, 20,443.

Information given by, to headquarters, not sufficiently distributed amongst subordinates, 20,453.

Ladysmith, telephone system at, 20,457.

Mapping in South Africa, deficiencies as to, 20,443.

Amery, Mr. L. S.—continued.

Men:

- Comfort in barracks, importance of, 20,523.
- Qualities shown during the war by, 20,555, 20,559.
- Training, suggestions as to, 20,517, 20,555.

Military operations:

- Lombard's Kop, cavalry retreat from, 20,440.
- Mounted Infantry, *see* Army Organisation.

Officers:

- Information supplied to witness by, 20,458.
- Staff officers:
 - Esprit de corps, cultivation of, suggestion as to, 20,494.
 - General Officer Commanding, knowledge as to proper utilisation of staff, importance of, 20,513.
 - Plan of campaign not worked out by staff officers before the war, 20,465, 20,491.
 - Qualities shown during the war by, and suggestions as to training, 20,493.

Preparations for the war:

- Plan of campaign, absence of, 20,465.
- Political considerations affecting, 20,482.
- Troops in South Africa before the war, adequacy of, for defence of the colonies, question as to, 20,465, 20,469, 20,488.
- Scouting, deficiency in, during the war, 20,448.

ARDAGH, MAJOR-GENERAL SIR JOHN C., K.C.I.E., C.B., LL.D., R.E. (*See* Questions 4964-5244.)

Director of Military Intelligence from 1896 to 1901, 4964.

- Boer Forces, information given by Intelligence Department as to:
 - Armaments and military strength, 5100, 5163.
 - Shooting, 5241.

Intelligence Department:

- Duties and position of, views of witness as to, 4966, 4974, 5020.

- Range and effect of guns, and quality of gunnery, 19,820 (page 424), 19,902.
- Entrenchments, 19,820 (page 425), 19,969.
- German officer superintending, 19,970.
- Numbers of Boers contained by Frontier Force and siege of Mafeking, 19,820 (page 424), 19,899.
- South African Constabulary, Boers in, 20,003.

Buluwayo:

- Artillery in, 19,820 (page 423).

Supplies:

- Before the war, 19,838.
- Sent up after relief of Mafeking, 19,894.

Cavalry:

- Arms and use of, in modern warfare, 19,820 (page 425), 19,933, 19,943.
- Sharpening and keeping sharp of swords, 19,820 (page 425), 19,956.
- Training in horsemanship, 19,820 (page 425), 19,940.

Colonial Forces, organisation of, in peace time, suggestions as to, 19,820 (page 424).

Absence of organisation before the war, 19,829, 19,834.

Discipline and punishments, 19,820 (page 425), 19,976*.

Equipment, reserves of, 19,820 (page 425), 19,829.

Officers:

- Accounts and supply duties, 19,924.
- Supply of, 19,829.

Recruiting—registration of finger-prints, 19,820 (page 425), 19,983.

Scheme for organisation of, desirability of, 19,931.

Colonial Troops serving under witness:

- Frontier Force, *see that sub-heading*.
- Over-seas Colonials, 20,010.
- South African Constabulary, *see that sub-heading*.

Entrenchments, character advocated, 19,820 (page 425), 19,963.

Loop-holes, length of, 19,965.

Equipment, 19,820 (page 425).

Saddlery, patterns and quality of, 19,820 (page 425), 19,985.

Farriers and shoeing smiths, deficiency in, 19,820 (page 425).

Baden-Powell, Major-General R. S. S.—continued.

Frontier Force, Rhodesia, raising and organisation of, 19,820 (page 423), 19,822.

Artillery, 19,820 (page 423), 19,864.

Ammunition, 19,866.

Constitution and discipline of, 19,820 (page 423), 19,853.

Division of force, and stationing at Tuli and Mafeking, 19,820 (page 423), 19,871.

Equipment, 19,820 (page 423), 19,835.

Extent of frontier, 19,900, 19,901.

Horses, provision, 19,820 (page 423), 19,845.

Intelligence Officers in, 19,820 (page 424), 19,880, 19,887.

Maps prepared and issued to, 19,892.

Medical Services, 19,861.

Men:

Quality and training of, 19,844, 19,858.

Sources from which drawn, 19,840, 19,843.

Terms of enlistment, pay, etc., 19,841.

Officers:

Quality and training, 19,858.

Supply of, 19,820 (page 423), 19,829.

Position of force under General Officer Commanding in South Africa, 19,820 (page 424), 19,827.

Prohibition of raising of force in Cape Colony in peace time, 19,853.

Standing orders as to pay, etc., compiled by witness, 19,935.

Transport and supplies, 19,820 (page 423), 19,837.

Intelligence Department:

- Assistance received from, 19,880, 19,997, 20,015.
- Expenditure on Intelligence, inadequacy of in years preceding the war, 19,997.

Mafeking, Siege of:

Account, summary, of investment, siege, and relief, 19,820 (page 424).

Artillery, 19,820 (pages 423, 424), 19,868, 19,911.

Light and mobile guns, necessity for, 19,820 (page 425).

Worked by police, 19,878.

Attack on Boers immediately after the relief, 19,897.

Boers, investing, *see sub-heading* Boers.

Discipline and punishments, 19,976*, 19,980.

Entrenchments, British, 19,963.

Intelligence Officers, information collected by, 19,820 (page 424), 19,880.

Natives, employment of, for looking after cattle, etc., 19,874.

Preparations for the siege, 19,820 (page 424).

Selection and holding of Mafeking, reasons for, 19,820 (page 424), 19,871.

Signalling lamps and searchlights used during, 19,995.

Supplies in:

Preparations for the siege, 19,820 (page 424).

Rations at time of the relief, 19,820 (page 424), 19,894.

Troops, strength and composition of, 19,820 (page 424), 19,874.

Use of Mafeking as a base previously to outbreak of the war, prohibition of, 19,855.

Men:

Quality as to shooting:

Firing mounted successfully practised in South Africa, 19,820 (page 425).

Training, suggestions as to, 19,820 (page 424), 19,915.

Disposition of men for tactical work, 19,820 (page 425), 19,988.

Mounted Infantry:

Use of, distinct from that of Cavalry, 19,820 (page 425), 19,938.

Officers:

Pay responsibilities, release from, by appointment of Regimental Paymasters, views of witness as to this suggestion, 19,920.

Probationary Officers, promotion from the ranks, suggestion as to, 19,994.

Baden-Powell, Major-General R. S. S. —continued.

Rifles, 19,820 (page 424), 19,943.

South African Constabulary, raising, organisation, and work of, 19,820 (page 423), 19,916.

Composition of force, 20,003.

Discipline, 20,005.

Entrenchments, practice as to, 19,820 (page 425).

Forts, construction, 19,990.

Men:

Quality of, 20,007.

Training, 19,916, 20,006.

Officers:

Accounts and supply duties, 19,929, 19,934.

Probationary Officers, promotion from the ranks, 19,991.

Recruiting for, registration of finger-prints, 19,983.

Strength of force, 20,004.

Supplies:

"Corners" in local supplies, prevention advocated, 19,820 (page 425).

Mafeking, *see that sub-heading*.

Transport, 19,820 (page 425).

Tuli, column stationed at, 19,820 (page 423), 19,871.

War Office Organisation:

Intelligence Department, *see that sub-heading*.

Remount Department, war establishment at the Cape, 19,849.

BARTON, MAJOR-GENERAL G., C.B., C.M.G. (*See Questions 16,181-16,395.*)

Services of witness in South Africa, 16,181.

Army Service Corps, deficiency in officers in early stages of the war, 16,260.

Artillery:

Ammunition:

Common shell and shrapnel, effect of, compared, 16,313.

Mobility and range of guns, 16,308.

Naval guns, 16,308, 16,322.

Auxiliary Corps:

Raising and organisation of local corps, rules in pamphlet form, suggestion as to, 16,370.

Boers:

Artillery, 16,323.

Attack by, rarity of, 16,382.

Bandoliers, 16,364.

Cover, quality as to, 16,219.

Mobility, 16,229.

Rifle, quality of, 16,327.

Shooting, quality as to, 16,215.

Colonial Corps:

Officers, provision, 16,372.

South African corps, raising and organisation of, 16,200.

Engineers:

Duties of Chief Engineer, increase of, since abolition of the Quartermaster-General, 16,305.

Qualities shown during war by, 16,304.

Entrenching Tools:

Wallace spade, objections to, and suggestions as to a substitute, 16,290, 16,389.

Equipment, 16,361.

Horses, 16,275.

Infantry Tactics:

Combined tactics and simultaneous attacks, views as to, 16,224.

Barton, Major-General G. —continued.

Lines of Communication:

Supply of men for, detention of drafts going up country, etc., 16,345.

Medical Services, 16,298.

Men:

Quality of:

Courage in attack, 16,221, 16,382.

Cover, taking, 16,217, 16,223.

Physique, morale, marching and shooting, 16,203.

Training, suggestions as to, 16,231, 16,257.

Shooting, training in, abolition of figure of merit advocated, 16,355.

Military Operations:

Colenso, battle of, 16,221, 16,227.

Ladysmith, retention of cavalry in, 16,196.

Troops, number which would have been necessary to prevent invasion of the colonies in 1899, 16,193.

Militia Reserve, abolition advocated, 16,342.

Mounted Infantry:

Deficiency in mounted men in early stages of the war, 16,193.

Future organisation and use of, suggestions as to, 16,331.

Non-commissioned Officers, supply of, for mounted infantry, 16,338.

Officers:

Commanding Officers and Company Leaders, increased authority advocated, 16,235, 16,257.

Horses, keeping, by infantry officers, suggestion as to, 16,349.

Pay responsibilities and accounts, relief from advocated, 16,245, 16,376.

Staff Officers:

Duties, 16,236.

Qualities shown by officers serving with witness in South Africa, 16,243.

Training, 16,244.

Railways (Orange Free State and Transvaal):

Difficulties caused by Dutch officials, 16,277, 16,384.

Reservists:

Qualities shown during the war, 16,207, 16,213.

Training, annual, in shooting, suggestion as to, 16,209.

Rifles:

Quality of, 16,327.

Sighting, 16,328.

Supplies, 16,260.

Transport:

Load tables, increase of allowance advocated, 16,287.

Regimental and general transport compared, 16,285.

Troops in South Africa:

6th Infantry Brigade, composition and quality of, 16,182, 16,203, 16,204.

Strength of, adequacy of, views of witness 16,188, 16,193.

Uniform, khaki, advantages of and suggestions as to patterns, etc., 16,365.

BORRETT, MAJOR-GENERAL H. C. (*See Questions 5245-5443.*)

Inspector-General of Recruiting, and from 9th October, 1899, to 26th March, 1900, Inspector-General of Auxiliary Forces, 5245.

Imperial Yeomanry in South Africa:

Enlistment, terms of, 5294.

Pay, difference of, as compared with Volunteers, 5401.

Quality, 5385.

Militia:

Age of Militia for South African service, 5255

Artillery, 5278.

Calling up of Militia battalions to replace home battalions of Regulars, 5254.

Officers in Militia, method of appointing for the war, 5258, 5299, 5312, 5336.

Quality of Militiamen, 5302.

Selection of Militia battalions to go to South Africa, 5255.

Borrett, Major-General, H. C.—continued.

Recruiting:

- Areas, 5352.
- Changes in standards, 5381.
- Conditions of service, improvement in, 5369.
- Dislocation of recruiting system by war, 5354.
- Increase of recruits after outbreak of war, 5361.
- Infantry, difficulty in recruiting for, 5362.
- New terms of recruiting, 5368, 5409.
- Quality of recruits hitherto, 5374, 5404, 5431.
- Skilled artificers, 5386.
- Staff at headquarters, 5349.
- Total recruits raised during war, 5402.
- South African Constabulary, 5399, 5423.

Volunteers:

- City Imperial Volunteers, embodiment of, 5287, 5292.
- Quality, 5414.
- Service Companies of Volunteers, 5290, 5320, 5401.

BRABAZON, MAJOR-GENERAL J. P., C.B. (See Questions 6836-7001.)

 Defence scheme, troops available for, *see sub-heading* Defence Scheme—Number of Troops.
 Number of troops necessary for military operations in South Africa, estimates of, 13,506, 13,520, 13,575, 13,585, 13,589.
 Tuli, proposed movement from, into the Transvaal, 13,586, 13,589, 13,591, 13,623.
 Van Reenen's Pass, question as to occupying, 13,416.

War Office:

Allegation that war was not thought immediately impending by War Office in December 1898, or June 1899, 13,424, 13,425.
 Confusion alleged, in May 1899, 13,424.
 Correspondence with, as to the action of
 Witness:

In November 1899, 13,416, and page 98.
 In 1901, 13,410, and page 98.

CARR, COLONEL E. E., C.B., Commanding 2nd Royal Scots Fusiliers. (*See* Questions 19,145-19,298.)
 Services of witness in South Africa, 19,145 (page 392).

Army Organisation:

Mounted Infantry:

Supersession of infantry by cavalry or mounted infantry, impossibility of, 19,265.
 Training, 19,266, 19,295.

Artillery:

Ammunition, supply of, 19,146 (page 394), 19,256.
 Officers, training, 19,146 (page 393), 19,180

Boers:

Ambushes, skill in, 19,204.
 Individuality, 19,146 (page 394).
 Shooting, quality as to, 19,197.

Colonial Troops, Equipment:

Boots, 19,232.
 Caps, 19,213.

Entrenching tools:

Transport of tools in carts advocated, 19,255.
 Wallace spade, 19,146 (page 394), 19,254.

Equipment:

Ammunition pouches and bandoliers, 19,145 (page 394), 19,215.
 Boots, 19,146 (page 394), 19,219.
 Clothing, quality of, suggestions as to patterns, etc., 19,146 (page 394), 19,206.

India, drafts from, 19,146 (page 393), 19,157.

Manœuvring areas, provision of, necessity for, 19,175, 19,185.

Men:

Classes from which recruited, 19,163.
 Qualities of, 19,146 (pages 393, 394).
 Cover, 19,146 (page 393), 19,167.
 Entrenching, 19,146 (page 393).
 Intelligence, 19,146 (page 393), 19,163.
 Morale, 19,146 (page 393), 19,160.
 Physique, 19,146 (page 393), 19,153.
 Teeth, difficulties as to, 19,146 (page 393), 19,158.
 Shooting, quality as to, 19,197.
 Training, present system and suggestions as to improvements, 19,146 (pages 393, 394), 19,186, 19,188, 19,204, 19,266, 19,286*.
 Shooting at moveable objects advocated, 19,146 (page 394), 19,195.
 Telescopes and field glasses, training in use of, 19,205.

Mounted Infantry, *see sub-heading* Army Organisation.

Non-commissioned Officers:

Qualities of, 19,191.
 Supply of, difficulties as to, and suggestion as to enlistment of boys, 19,191.
 Training, 19,146 (page 394), 19,189.

Carr, Colonel, E. E.—continued.

Officers:

Detachment of young officers from battalions for staff purposes in earlier stages of service, drawback attending, 19,263.
 Pay responsibilities, relief from, advocated, 19,278, 19,288.
 Quality, 19,146 (page 393), 19,173.
 Sections, command of, 19,181.
 Lieutenants and sub-lieutenants, 19,271.
 Training, 19,146 (page 393), 19,175, 19,186.
 Pay system, 19,278.
 Regimental Paymaster, appointment advocated, 19,288.

Reservists:

Number of, in 2nd Royal Scots Fusiliers, 19,149, 19,293, 19,294.
 Quality of, 19,151.

Rifles:

Quality and pattern of, 19,146 (page 394), 19,257.

Scouts, training of men as, advocated, 19,146 (page 394), 19,204, 19,295.

Supplies:

Food, 19,146 (page 394), 19,250.
 Tinned meat, 19,246.

Transport, Regimental:

Advantages of, 19,146 (page 394), 19,240.
 Officers in charge of, regulations as to, 19,243.

Troops in South Africa:

2nd Royal Scots Fusiliers, 19,146 (pages 392, 393), 19,147, 19,157, 19,277.
 Quality of men, *see sub-heading* Men.
 Strength of, 19,293.
 Water, sanitation of, 19,251.

CHESHAM, MAJOR-GENERAL, LORD, K.C.B. (*See* Questions 6717-6835).
 Inspector-General of Imperial Yeomanry, 6762.

Artillery, 6829.

Imperial Yeomanry in South Africa:

First Contingent:

Quality of, 6768.
 Raising and organisation, 6717.
 Training, 6731.

Second Contingent:

Raising and organisation of, 6731.
 Training in South Africa, 6744.

Age standards, 6758.

Arms, equipment, 6780, 6825.

Drafts to maintain Imperial Yeomanry not allowed, 6725.

Horses, provision of, 6730.

Medical tests of fitness, 6750.

Mounted Infantry, organisation as, 6777.

Numbers eliminated in South Africa, 6732.

Officers:

Difficulty in obtaining, 6722, 6815.
 Numbers eliminated in South Africa, 6732.
 Reserve of, suggested, 6818.
 Selection of, for second contingent, 6731.
 Raising by special agencies, 6799.

Yeomanry, Home:

Future organisation, suggestions as to, 6787.
 Officers of, who served in South Africa, 6793.
 Strength in 1899, 6783.

CHICHESTER, REAR-ADMIRAL SIR E., BART., C.B., C.M.G., R.N. (*See* Questions 9885-10,017.)

Principal Transport officer in South Africa from October, 1899; 9885.

Services in Egypt and during First Boer War, 9958.

Transport by sea:

Admiralty, arrangements as to, satisfactory working of system, 9954.
 Ammunition, landing of, at Cape Town by Boers, reports as to, 10,009.
 Discipline on board transports, 9945.
 Disembarkation, 9891.
 Cape Town, 9891, 9954, 9965, 9971, 9994.
 Demurrage, 9916, 9965.
 Port dues, 9982, 10,002.

Chichester, Rear-Admiral Sir E.—continued.

Transport by sea—continued.

Durban, 9891, 9919.
East London, 9891.
Port Elizabeth, 9891, 9925.
Store ships, and especially hay stores, delay as to, 9909, 9930, 9965.
Horses, 9968.
Hospital ships, fitting up at Durban, 10,014.
Local transport, 9940, 9985.
Prisoners of war on board transports, 9948.
Vessels best suited for transport, 9968.

CLARKE, SIR CHARLES MANSFIELD, BART., C.L.,
Quartermaster-General to the Forces. (See Questions 2342-2594, 2807-2816, and 12,908-13,015.)

Army Service Corps, 2358.

Committees on Remounts, 2357, 12,908, 12,976, 12,980.

Documents handed in by witness :

(1) Numbers and cost of horses, mules, and donkeys procured from all sources for the South African War 1899-1902. Cost and numbers of animals lost. (2) Returns of horses and mules purchased by the Army Remount Department for South Africa from October, 1899, to June, 1902, 12,919, 12,926, 12,990, 12,999, 13,003.

Horses :

Australian contingent, 12,999.
Estimate of number required in time of war, 12,985.
Foreign sources of supply, information as to, 12,919, 12,976, 12,978.
Purchase of, by Remount Department :
Argentinians, 12,952.
Transport, small percentage of loss during, 12,990.
Date of authorisation of provisional expenditure, 12,945.
Direct dealing with foreign landowners and horse-breeders, difficulty as to, 12,965, 12,973.
Hungarian, 12,955, 12,964.
Prices paid, 13,003.
Quality of horses, 12,952, 13,000.
Returns as to purchases, losses, etc., 12,919, 12,926, 12,990, 12,999, 13,003.
Russian, 12,959.

Wastage during the war, 12,928, 12,951, 12,995.

Mules and donkeys, purchase of, 12,919, 12,926, 13,003.

Preparations for the war, 2356, 2363.

Expenditure sanctioned, 2366, 2464, 2475, 2488, 2543.

Supplies :

Adequacy of, 2390.
Purchases in South Africa, 2519.
Reserves at outbreak of war, 2381, 2472.
Sources of supplies of food, 2520, 2568.

Transport (land), 2418, 2534.

Conversion to mule transport, 2418.
Provision of wagons, 2421, 2433.
Re-organisation under Lord Roberts, 2430.

Transport (sea), 2356, 2395.

Dock accommodation in South Africa, 2404, 2498, 2530.
Horse fittings on ships, 2525, 2807.
Relations with Admiralty as to, 2588.

War Office Organisation, 2578 :

Army Board and War Office Council, 2440, 2538.
Clerks, Military, employment of, 2442, 2453, 2482, 2573.
Pay Department, 2358.
Quartermaster-General, duties of, 2349.
Remount Department, 12,910.
Reorganisation, proposals for, 12,919, 12,975, 12,981, 12,988, 13,014.
Veterinary Department, 2358.

CLAYTON, COLONEL F. T., C.B. (See Questions 2595-2806.)

Assistant Quartermaster-General at Headquarters since April, 1902 ; 2595.
Services in South Africa, 2597.

Army Service Corps :

Expenditure, sanction of, 2636.
Personnel in peace, 2703.
Strength taken out 6th October, 2602, 2728.
Subsequent reinforcements, 2603.
Witness in command of personnel in South Africa, 2599.

Reserves of transport material, 2779.

Transport (Land) :

Commandeering of, 2718, 2738, 2794.
Contracts for wagons and oxen, 2709.
Methuen, Lord, advance of, transport in connection with, 2752.
Natal, provision in, 2648, 2691, 2790.
Ox and mule transport compared, 2758.
Preparation in South Africa before arrival of the Army Corps, 2611.
Reorganisation under Lord Roberts, 2655, 2748, 2766, 2800.
Sufficiency of, 2698, 2726, 2768, 2775, 2788.
Traction engines, 2743, 2784.
Wagons and carts, supply of, 2625, 2709, 2729, 2776.

COKE, MAJOR-GENERAL J. TALBOT. (See Questions 20,197-20,273.)

Services of witness in South Africa, 20,197.
Chief Staff Officer before the war at the Curragh Camp of Instruction, and at Aldershot, 20,212. Present at German and French Manœuvres in 1897, 20,213.

Artillery, employment of, at manœuvres, 20,215.

Boer Entrenchments, 20,215.

Cavalry Training, 20,215.

Colonial Forces—South African Colonials :

Imperial Light Infantry :

Command of by witness, 20,202.
Composition and quality of, and behaviour at Spion Kop, 20,252, 20,268.
Officers, 20,252, 20,261.
Terms of enlistment, pay, etc., 20,265.
South African Light Horse—Byng's, 20,262.

Entrenching Tools :

Transport in cars or on mules advocated, 20,215, 20,222.
Wallace spade, 20,215, 20,221.

Entrenchments :

Depth and width of, 20,215.
Training of men in entrenching, 20,215.

Foreign Armies :

Entrenching tools, 20,215, 20,216.
Manœuvres, 20,215, 20,234.

Manœuvring Areas, provision, 20,228, 20,247.

Men :

Training, 20,211, 20,226.

Military Operations—Spion Kop, 20,209.

Entrenchments, defective construction, 20,210, 20,215.

Imperial Light Infantry at, 20,252.

Ammunition expended by, comparison with amount expended by 2nd Battalion Middlesex, 20,255.

Signal messages to Sir C. Warren during, 20,210.

Statement by Major-General Talbot Coke as to, 20,208, 20,270.

Officers :

Staff Officers with witness during operations terminating in Battle of Spion Kop, 20,210.
Training, 20,214, 20,225.

Troops commanded by witness in South Africa, 20,198.

Colonial Forces. (See that sub-heading.)

COLLEN, MAJOR-GENERAL SIR EDWIN, G.C.I.E. (*See Questions 20,954-21,072.*)

Military Member of Council at the time that the Indian Contingent was sent to South Africa, 20,955.

Indian Army Administration :

Account, detailed, of administration, 21,013.
Army Board, no institution exactly analogous to, in Indian Army administration, 21,070.
Controllers, 21,020.

Position of, 21,021.

Finance Department, 21,016, 21,044.

Intelligence and Mobilisation Department, 21,019, 21,037.

Medical Department, 21,015.

Mobilisation, arrangements as to and period occupied in, 20,972, 21,054.

Officers—Staff officers, provision and training of, 21,062.

Transport, land, 20,995, 21,054.

Uniformity of system with that of England, difficulties arising from lack of, 21,020, 21,032.

Indian contingent for service in South Africa, 20,956.

Additional troops sent out during the war, 20,979.

Composition of force, 20,959.

Dates of warning troops for active service, and of mobilisation, 20,964, 20,967, 20,971, 20,976.

Diminution of Indian garrison resulting from despatch of force, 20,961.

Numbers by which garrison were diminished, 20,984.

Replacement of troops, question as to, 20,978, 20,980.

Horses, mules, and ponies, 20,986, 21,007.

Non-combatants and natives, 20,985.

Officers—Staff officers, 21,061.

Preparations for despatch of force in August 1899, 20,956.

Strength of force, 20,977, 20,980, 20,985.

Supplies, equipment, etc., 21,009.

Boots, 21,009, 21,056.

Transport (Land) :

Regimental transports, 20,992.

Transport (Sea)—arrangements as to, 20,957, 20,966, 21,058.

COLVILLE, MAJOR-GENERAL SIR HENRY E., K.C.M.G., C.B. (*See Questions 16,970-17,126.*)

Services of witness in South Africa, 16,970.

Army Organisation, 16,974 (page 288), 17,061.

Army Corps system, disadvantages of, 16,974 (page 289), 17,077.

Artillery :

Ammunition, supply of, and conveyance to the firing line, 16,974 (page 287).

Battery attached to each brigade, suggestion as to, 16,974 (page 289).

Field artillery drill, reform advocated, 16,974 (page 288).

Range, quality and effectiveness of guns, 16,974 (page 288), 17,043.

Machine guns, 16,974 (page 288), 17,057.

Naval guns, 16,974 (page 288), 17,046, 17,090.

Vickers-Maxims (Pom-poms), 16,974 (page 288), 17,058.

Tactics, 16,974 (page 288).

Boers :

Artillery, 16,974 (page 288), 17,043, 17,047.

Discipline, absence of, and weakness in attack, 16,974 (page 288).

Mobility, 16,974 (page 288).

Rifle, 16,974 (page 288).

Shooting, quality as to, 16,988.

Canadian Troops, quality of, 17,117.

Cavalry, deficiency in, at certain stages of the campaign, 16,974 (page 285), 16,975, 16,981, 16,985.

Document—correspondence relative to the recall of Major-General Sir H. E. Colville, K.C.M.G., C.B. (page 296).

Engineer Services, efficiency of, 16,974 (page 288), 17,002.

Colville, Sir H. E.—continued.

Equipment, 16,974 (page 288).

Boots, 16,974 (pages 286, 288), 16,987, 17,113.

Canadian troops, 17,119.

Infantry Tactics, 16,974 (page 288).

Medical Services, 16,974 (page 287).

Deficiency in personnel or equipment, 16,974 (pages 287, 288), 17,041.

Stretchers, light awnings for, advocated, 16,974 (page 288).

Men :

Discipline, importance of, 14,963 (page 285).

Esprit de corps, effect on, of uniforms, regimental names, etc., 17,003.

Pay, increase of, question as to possible effect of, on class of man recruited, 17,001.

Quality of, 16,974 (page 286), 16,987.

Entrenching and cover, 16,974 (page 286), 16,997.

Marching, 16,974 (page 286), 16,987.

Shooting, 16,974 (page 286), 16,988.

Training, suggestions as to, 16,974 (page 286), 16,991, 16,998.

Crawling, training in, 16,974 (page 288), 17,075.

Military Operations :

Belmont, 16,974 (page 285), 16,976.

Graspan, 16,976.

Magersfontein, 16,974 (page 285), 16,978.

Modder River, 16,974 (pages 285, 288), 16,976.

Paardeberg, 16,974 (page 285), 16,983.

Poplar Grove, 16,974 (pages 285, 289).

Sannah's Post and Lindley, 16,974 (pages 285, 289), 17,085, 17,103.

Correspondence relative to the recall of witness, page 296.

Ventersberg and Heilbron, minor operations between, 16,974 (pages 285, 286).

Non-commissioned Officers, selection and duties, 16,974 (page 286), 17,009.

Officers :

Duties of, 16,974 (page 287).

Education of candidates, 16,974 (page 287), 17,013.

Number allotted to a Company, views of witness as to, 16,974 (page 289).

Pay, 16,974 (page 286), 17,011.

Promotion, 16,974 (page 286), 17,015.

Relations with men, 17,003.

Qualities, and suggestions as to training, 16,974 (pages 286, 287), 17,010, 17,023.

Staff officers :

Supply and training, 16,974 (page 287), 17,026.

Reservists, quality of, 16,974 (page 285), 16,994.

Rifles, quality of, 16,974 (page 288), 17,056.

Signallers, Mounted, suggestion as to, 16,974 (page 289), 17,084.

Supplies, 16,974 (page 287).

Emergency ration, defects in, 16,974 (page 287), 17,031, 17,121.

Transport, Land :

Insufficiency of, and over-loading of wagons, 16,974 (page 287), 17,037.

Ox and mule transport compared, 16,964 (page 287), 17,037.

Regimental and general transport compared, 17,061.

Troops in South Africa :

Strength of, at different stages of the war, views as to adequacy of, 16,974 (pages 285, 289), 16,975.

COWANS, LIEUT.-COLONEL J. S., M.V.O. (*See Questions 2817-2930.*)

Deputy Assistant Quartermaster-General, 2817.

Service in connection with transport embarkations and disembarkations, 2820.

Documents—Returns of the numbers of troops embarked and disembarked, 2890.

Transport by sea :

Admiralty and War Office, arrangements between, 2822.

Australia, transport from, 2898, 2903.

Disembarkations in South Africa, 2885, 2917.

Embarkations of troops and stores, 2851.

Fittings for ships, 2827, 2901, 2922.

India, transport from, 2895.

CRABBE, COLONEL E. M. S., C.B., Commanding 3rd Battalion of the Grenadier Guards. (See Questions 19,735-19,819.)

Services of witness in South Africa, 19,735, 19,738, 19,739.

Boers:

Cover, quality as to, 19,761.
Shooting, quality as to, 19,762.

Equipment:

Clothing, supply and quality of, 19,737, 19,774.
Imperial Yeomanry, serving under witness in South Africa, quality of, 19,785.
Kimberley relief operations, Boer shooting at Battles of Magersfontein, Modder River, and Belmont, 19,765.

Men:

Quality of, 19,737, 19,740.
Cover, 19,737, 19,761.
Drafts sent out to 3rd Battalion Grenadier Guards, quality of, 19,737, 19,744, 19,798, 19,811.
Shooting, quality as to, 19,763.
Training, 19,756, 19,807.
Discipline, importance of, 19,737, 19,754.
Period necessary, 19,761.

Officers:

Qualities, duties, and training of, 19,737, 19,756, 19,807.
Pay system, Guards Brigade, 19,803.
Reservists, quality of, 19,737, 19,740, 19,813.
Rifles, quality of, 19,737, 19,772.
Supplies, Food, adequacy of, 19,737.
Transport:
Ox and mule compared, 19,737.
Re-organisation under Lord Kitchener, and comparison of Regimental and General Transport, 19,737, 19,776.
Troops commanded by witness in South Africa:
3rd Battalion Grenadier Guards, 19,735, 19,738.
Conditions of service, 19,781, 19,816.
(See also sub-heading Men, Officers, etc.)
Columns, command of, 19,737.
Imperial Yeomanry, 19,785.

CRUTCHLEY, COLONEL C., M.V.O., Assistant Adjutant-General for Recruiting. (See Questions 5245 and 5433-5443.)

Imperial Yeomanry, quality of, 5433.
Recruiting, dislocation of system by the war, 5438.
Reserve, of skilled artificers needed, 5440.

DAVIDSON, COLONEL J., C.B. (See Question 6710-6716.)

Work in connection with Imperial Yeomanry Committee, 6710.

DAVIDSON, COLONEL W. L., C.B., Colonel on Staff, Royal Artillery, South Africa. (See Questions 18,620-18,721.)

Services of Witness in South Africa, 18,620.

Ammunition:

Supplies, 18,628.
Classes, range, and effectiveness of guns, 18,628, 18,629.
Heavy battery guns, 18,628, 18,646.
Horse Artillery, 18,628, 18,638.
Abolition of Horse Artillery and use of mobile field guns, views of witness as to this suggestion, 18,643.
Howitzers, 18,628.
Discipline in the field, powers of summary punishment advocated, 18,713.
Field-firing at home, difficulties as to ranges, 18,628, 18,647, 18,693.

Horses:

Quality, supply, and wastage of in South Africa, 18,628, 18,630, 18,654.
Marching with cavalry, wastage of Artillery horses owing to insufficient halts, 18,628, 18,660, 18,698.

Davidson, W. E.—continued.

Paardeberg and Poplar Grove, Artillery at, 18,628, 18,698, 18,702.

Personnel, Artillery:

Men:

Quality and training, 18,628, 18,678.
Classes from which recruited, 18,683.
Period required for training, 18,690.
Standing at ease and marching easy, general Army signal for, advocated 18,712.

Officers:

Position with regard to Divisional Staff, 18,628, 18,666, 18,698.

Food stuffs sent out previous to beginning of the war, 2938.

Inspection, method of, 3073, 3112, 3118.

FORESTIER-WALKER, GENERAL SIR F. W., K.C.B., G.C.M.G. (*See Questions 13,636-13,838.*)

Services of Witness in South Africa, 13,636, 13,677, 13,687, 13,688, 13,704, 13,726, 13,729, 13,762, 13,766, 13,774.

Advanced positions, proposals for occupation of, 13,675, 13,681.

Army Corps, despatch of, disembarkation, and send-up country of troops, 13,704, 13,726.

Army Service Corps, 13,709, 13,750.

Artillery in South Africa before the war, 13,640, 13,688, 13,692.

Boers, attitude of, 13,692:

Probable disinclination for war, if large force had been stationed in South Africa in June, 1899, 13,789.

Bridges:

Non-destruction of, 13,800.

Occupation of, 13,689, 13,697, 13,711.

Colonial Forces:

Correspondence as to casualties, embarkation, etc., 13,774.

South African Corps, levy of in Cape Colony and Natal, 13,701.

Commandeering, correspondence with Attorney-General and Lord Milner as to, 13,812.

Defence Schemes and Military Movements in South Africa:

Advance, probable line of, question as to, 13,670, 13,706.

Butler, Sir W., scheme prepared by, 13,661, 13,678, 13,784.

Cape Colony, 13,688.

Troops:

Irregular corps, levy of, 13,701.

Number available at outbreak of war, 13,640, 13,689.

Natal, 13,678:

Troops:

Disposition of, before the war, 13,681, 13,687.

Irregular Corps, levy of, 13,701.

Number available, 13,640, 13,679.

Documents—Reports sent by Witness to Secretary of State, 13,743, and page 95.

Dundee, question as to occupation of, 13,682.

Glencoe, occupation of, 13,683, 13,687.

Green Point Camp, 13,722, 13,823.

Horses:

Glanders outbreak at Green Point Camp, 13,826.

Officers in charge of, during transport, 13,783.

Purchase of, 13,642, 13,698.

Wastage of, 13,770.

Hospital and Ambulance preparations, 13,722.

Instructions to Witness, questions as to, 13,657, 13,796.

Intelligence officers, reports by on bases, depôts, etc., 13,663.

Invalids, sending home, duties of Witness in connection with, 13,766.

Kimberley:

Artillery and troops at, 13,688, 13,697.

Scheme for defence of, 13,664.

Ladysmith, defence of, 13,681, 13,685.

Laine's Nek, proposal made to occupy, 13,675, 13,683.

Forestier-Walker, Sir F. W.—continued.

Lines of Communication:

Command of, given to witness, 13,638, 13,706. Manual on, suggested, 13,753, 13,781, 13,794.

Officers:

Chief Staff Officer to General Commanding Lines of Communication, suggestion as to, 13,758.

General Commanding Lines of Communication, suggestion that he should be supreme in his command, 13,758.

Selection of in future campaigns, suggestions as to, 13,781.

Supply of, difficulty of, 13,750, 13,764.

Mafeking, defence of, 13,688.

Maps of South Africa, 13,785.

Milner, Sir A., communications of witness with, 13,638, 13,683, 13,688, 13,720, 13,813, 13,829.

Orange Free State and Cape Colony, relations between, 13,692.

Political situation, effect of, on preparations for the war, 13,688, 13,692, 13,720, 13,724.

Prisoners, control of, 13,762.

Reports sent by witness to Secretary of State, and to Lord Roberts, 13,743, 13,756.

Stormberg, Naaupoort, and de Aar, occupation of, 13,689, 13,691, 13,710.

Supplies and Stores:

Meetings of officers to discuss sending on of supplies, etc., 13,759.

Requisitioned from England, 13,737.

Transport (Land):

Adequacy of, 13,817.

Horses and mules, purchase of, 13,642.

Ox wagons, contract for, 13,653.

Transport (Sea):

Disembarkations, 13,710, 13,731, 13,740.

Delay, alleged, as to store ships, views of witness as to, 13,792, 13,820.

Satisfactory working of, by Admiralty, 13,734, 13,819, 13,822.

Troops:

Army Corps, *see that sub-heading.*

Drafts for regiments up country, 13,770.

India and Mediterranean, despatch of troops from, 13,667, 13,673.

Strength of:

Estimate of numbers required for military operations in South Africa, 13,676.

In South Africa in September 1899, 13,640, 13,656.

FRENCH, MAJOR-GENERAL, SIR GEORGE A., K.C.M.G. (*See Questions 8017-8342.*)

Services in the Colonies, 8017, 8160, 8305.

Military Operations:

Cape Colony and Orange Free State:

- Colesberg, operations at, troops available for, 17,129 (page 300), 17,161, 17,170.
- Kimberley Relief Operations and operations culminating in the capture of Bloemfontein:
- Horses, wastage during, 17,129 (page 302), 17,186.
- Supplies during, 17,129 (page 302).
- Troops, strength of, 17,129 (pages 300, 302), 17,177, 17,186.

Natal:

- Boers opposed to British at Ladysmith, numbers in earlier part of campaign, 17,366.
- Dundee, occupation of, 17,141.
- Lombard's Kop, retirement of cavalry from, 17,150.
- Operations proposed by witness on 27th October 1889, 17,130.
- Troops with Sir George White, strength of, adequacy of, views of witness as to, 17,129 (page 300), 17,130.
- Question as to number which would have been necessary to drive Boers behind the Biggarsberg, and hold them in check, 17,143.

Orange Free State and Transvaal, operations culminating in capture of Pretoria:

- Horses, casualties in, 17,129 (page 318), 17,186.
- Supplies during, 17,129 (page 317).
- Troops, strength of, 17,129 (page 300).

Mounted Infantry:

- Aldershot, proposed mounted infantry camp at, 17,339, 17,397.
- Organisation of, question as to, 17,378.
- Qualities shown during the war by, 17,129 (page 301), 17,171, 17,211, 17,223.
- Training and use of, 17,214, 17,240, 17,398.
- Mounted Rifles, training and use of, 17,220, 17,226.
- Non-commissioned Officers, duties of, 17,129 (page 301).

Officers:

- Qualities shown during the war by, and suggestion as to training, 17,129 (page 301), 17,209, 17,297, 17,391, 17,392.

Staff Officers:

- Training, selection, and duties of, 17,129 (page 301), 17,268.
- With witness in South Africa, 17,270.
- Rifles, quality of, 17,129 (pages 300, 302).
- Signallers, mounted, 17,384.

French, Sir J. D.—continued.

Supplies—Food and Forage :

Quantity and quality of, 17,129 (pages 301, 302), 17,183.

Tinned meat, 7lb. tins, objection to, 17,129 (page 302), 17,349.

Transport :

Cavalry, provision of light regimental transport for, suggested, 17,129 (page 301), 17,194.

Ox and mule compared, 17,129 (page 302).

Regimental and general transport compared, 17,201.

Troops in South Africa :

Strength of, adequacy of at different stages of the war, views as to, 17,129 (pages 300, 302), 17,130, 17,162, 17,170, 17,178, 17,186.

War Office Organisation :

Decentralisation as to financial matters and discipline, extent of, 17,401.

Yeomanry :

Organisation as mounted infantry, question as to, 17,227.

FRIPP, DR. ALFRED DOWNING, C.V.O., C.B., M.S., M.B., F.R.C.S. (See Questions 11,813-11,965.)

Services of witness in South Africa, 11,813.

Advisory Board, Medical, *see* sub-heading "War Office."

Civilian Physicians and Surgeons serving during the war, 11,866, 11,874.

Director-General, improved status of, 11,827.

Enteric, 11,864, 11,869.

Hospitals :

Civil Hospitals, provision of Field Hospitals by, in time of peace, views as to, 11,874.

Regular Military Hospitals :

Civil population, treating in, views as to, 11,882.

Convalescent Camps, advocated, 11,852, 11,916.

Improvements and expenditure advocated, 11,889, 11,949.

Management of, in South Africa, 11,820.

Private soldiers, view of as to, 11,882, 11,912.

Yeomanry Hospitals :

Book on, by Lady Howe, 11,956.

Comparison with Regular Military Hospitals, 11,820.

Convalescent Camps, organisation of, 11,852.

Personnel, 11,846, 11,856, 11,869, 11,919.

Size of, 11,816.

Royal Army Medical Corps :

Equipment, 11,860, 11,870.

Personnel :

Dental Surgeons and Masseurs advocated, 11,919.

Nurses, female, employment of, 11,875, 11,963.

Officers :

Candidates, increase in number of, 11,935.

Colonel-in-Command, duties of, purely administrative, 11,835.

Promotions, 11,828, 11,830, 11,909.

Quality, 11,831, 11,840, 11,899.

Officers and privates of Regular Army, views as to Army Medical Corps, 11,882, 11,899.

Raising of standard, means advocated, 11,826, 11,935.

Reserve :

Civilians as, views as to, 11,873.

Quality of existing Reserve, 11,938.

Status, 11,827, 11,844.

Training and opportunities for practice, 11,827, 11,893, 11,915, 11,930.

Orderlies, 11,846.

Sanitary officer, appointment advocated, 11,923.

Sanitation, importance of, 11,863, 11,891, 11,896, 11,930, 11,965.

Frupp, Dr Alfred Downing—continued.

War Office Organisation :

Advisory Board, Medical :

Constitution of, 11,824.

Procedure, form of, 11,924, 11,945.

Reforms instituted and proposed by, 11,826, 11,838, 11,878, 11,891, 11,933, 11,952.

Director-General, Army Medical Service, status of, 11,827.

GATACRE, MAJOR-GENERAL SIR W. F., K.C.B., D.S.O.

Commanded a Force in North-East Cape Colony ;

Commanded a Force in Southern Orange River Colony. (See Questions 16,771-16,917.)

Army Organisation :

Efficiency and numbers of the Army, 16,820.

Universal military training of boys of 18 for six months, question as to, 16,858.

Artillery :

Ammunition :

Lyddite, effect of, 16,772, 16,835.

Shrapnel, effect of, 16,831.

Range and quality of guns, 16,772, 16,830, 16,845.

Borders :

Ammunition, 16,797.

Artillery, 16,772, 16,831.

Entrenchments, 16,772.

Ruses to mislead enemy's fire, 16,772, 16,795.

Shooting, quality as to, 16,772, 16,794.

Colonial Troops—South African Corps, 16,875.

Horses :

Quality of, and wastage in South Africa, 16,772, 16,824.

Transport by sea, 16,825, 16,887.

Infantry Tactics :

Attack and advance, 16,772, 16,813.

Manœuvring Areas :

Provision of, 16,772, 16,806, 16,811, 16,846, 16,890.

South Africa, suitability of country for training purposes, 16,814.

Men :

Class from which recruited, 16,818.

Qualities shown in the war by, 16,772.

Entrenching and cover, 16,772, 16,806.

Horsemanship and horsemastership, 16,772, 16,823.

Intelligence, physique, and morale, 16,772, 16,807.

Marching, 16,772, 16,804.

Shooting, 16,772, 16,794.

Training, suggestions as to, 16,772, 16,790, 16,806, 16,811, 16,815.

Military Operations :

Reddersberg, 16,843, 16,898.

Stormberg, 16,779, 16,786, 16,892.

Militia :

Quality of, and suggestions as to training, 16,772, 16,799, 16,808.

Manœuvring area, annual change of views of witness as to, 16,890.

Mounted Infantry :

Importance of mounted infantry, or of cavalry working as mounted infantry in future warfare, 16,772.

Organisation, suggestion as to, 16,789, 16,792.

Troops trained by witness in South Africa, 16,778, 16,868.

Non-commissioned Officers :

Initiative, importance of, and suggestions as to training in, 16,772, 16,815, 16,848.

Officers :

Initiative, importance of, and suggestions as to training in, 16,815, 16,848.

Staff Officers :

Training, 16,842.

With witness in South Africa, 16,839.

Reservists, qualities shown during the war by, 16,809.

Rifles :

Quality of, and suggestion as to safe button-pressing rifle, 16,772, 16,836.

Catacre, Sir W. F.—continue

Troops with witness in South Africa :

- Colonial troops—South Africa Corps, 16,875.
- Militia, 16,798.
- Mounted infantry, trained by witness and subsequently transferred to other forces, 16,778, 16,868.
- Strength of, inadequacy of, 16,771, 16,772, 16,773, 16,866, 16,896.
- Yeomanry, manœuvring areas, advantages of changing, 16,890.

GODLEY, LIEUTENANT-COLONEL A. J., Irish Guards.
(See Questions 20,021-20,196.)

- Militia, supply of officers, 9382.
- Mobilisation, working of the scheme, 9467.

Grove, Sir Coleridge—continued.

Officers :

- Appointment of, 9414.
- Colonial appointments, supply of officers for, 9457.
- Education of candidates for the Army, 9401.
- Promotion, 9418, 9497.
- Reserve of, to serve with Militia, etc., suggestion as to, 9383.

Staff Officers :

- Appointments for South Africa, 9438.
- Rotation of Staff and regimental employments suggested, 9451.
- Selection of, 9437.
- Training, Staff College system, 9448.
- Supply of officers in relation to the demands of the war, 9381.
- Means of supplementing supply, 9382.

War Office Organisation :

- Centralisation of business, effect on, of questions asked in Parliament, 9487.
- Commander-in-Chief, position of, 9470, 9515.
- Comparison of War Office with business institutions, 9470, 9515.
- Duties of Military Secretary, 9378.
- Secretary of State, position of, 9470, 9487.

GUBBINS, COLONEL W. L., A.M.S., M.V.O. (*See Questions 3900-4023.*)

Assistant Director of the Army Medical Service Corps from March, 1895, to December, 1899, 3900. Service in South Africa, 3901.

Ambulance wagons, 3957 :

- Purchase in open market, views as to, 3885.
- Civilian surgeons, employment of, 3913.
- Convalescent camps, 3951, 3954, 3956.

Equipment, medical, 3917.

- Beds, 3943, 3949, 3980.
- Clothing—Pyjamas, 3946.
- Contracts, regulations as to, 3991.
- Departments responsible for supply of, 3992.
- Drugs and medical supplies, 3947.
- Hospital tents, 3946, 3994.
- Revision in 1897, 3962.
- Supplies, general observations as to, 3917, 3926, 3928, 3943, 3997.
- X Rays, 3979.

Establishment, basis of and provision for expansion of, 3927, 3931, 3942.

Foreign armies, equipment of, 3980.

Hospitals, additional advocated, 3954.

Mobilisation, medical, 3937.

Personnel, medical, 3908.

Nurses, 3955.

Officers, training and opportunities for practice, 4002.

Orderlies :

- Supply of, 3920, 3963.
- Training, 4019.
- Sanitary officer, appointment advocated, 3962.
- Strength of personnel, 3919, 3932, 3937, 3943, 3969.

Preparations for the war (medical), 3907, 3956, 3969, 3976.

Supplies (medical), 3947, 3991.

Food for hospitals, 3951.

Transport for medical purposes, 3961.

Hospital trains, 3961.

Voluntary aid :

- Red Cross Central Committee, 3963.
- St. John's Brigade, 3924, 3963, 3985.

HAIG, COLONEL D., C.B., A.D.C. (*See Questions 19,299-19,554.*)

Services of witness in South Africa, 19,299 (page 401), 19,300.

Army Organisation :

Army Corps system :

- Cavalry, organisation under, 19,361.
- Staffs, organisation under, 19,311.

(*See also Cavalry, Mounted Infantry, and Infantry.*)

Artillery Tactics, 19,299 (page 403).

Bloemfontein :

- Delay at, 19,377.
- March on, deficiency in supply of horses during, 19,299 (page 402), 19,374.

Haig, Colonel D.—continued.

Boers :

Horses, 19,419, 19,428.

Cavalry :

- Arms, and use of, in modern warfare, 19,299 (page 403), 19,468, 19,502, 19,536.
- Efficiency of Cavalry impaired in South Africa by appropriation of horses for Mounted Infantry, 19,299 (page 402), 19,375, 19,38.

Organisation :

- Absence of previously to, and in earlier stages of the war, 19,299 (page 402), 19,342.
- Suggestion as to future organisation, and provision of a Cavalry Reserve, 19,299 (page 402).

(*See also sub-headings Men, Officers, etc.*)

Colonial Troops :

Australian troops.

- Ambulance, 19,533, 19,537.
- Officers, provision, 19,299 (page 403), 19,545.
- Medical services, 19,299 (page 403).
- Officers, provision, 19,299 (page 403), 19,545.
- Quality as to horsemanship and horsemastership, 19,299 (page 403).
- South African Corps :
 - Kitchener's Horse and Roberts' Horse 19,299 (page 402), 19,388
 - Town Guards, 19,302.

Diamond Hill, action at, 19,539.

Engineer Services :

Mounted Engineers, necessity for, 19,299 (page 403).

Equipment—Cavalry :

- Weight of, reduction advocated, 19,299 (pages 403, 404, 405), 19,445.
- Farriers, deficiency in, 19,299 (pages 402, 403).
- German Cavalry, period of training, 19,486.

Horses :

- Price of cavalry horses, 19,443.
- Quality of, 19,299 (page 403), 19,460, 19,493.
- Size of cavalry horse, 19,463.
- Supply of, 19,299 (pages 402, 403), 19,367.
- Remounts during rapid cavalry movements, 19,400.
- Led horses with troops, suggestion as to, 19,408.
- Wastage of, in South Africa, 19,299 (page 403), 19,374, 19,406.

Infantry :

- Expenditure on, importance of, as compared with expenditure on other arms, 19,299 (page 404).
- Tactics, 19,299 (page 404).

Kimberley, march on :

- Cavalry, organisation, 19,343.
- Horses, supply and wastage of, 19,374, 19,401, 19,406.

Manœuvring Areas, provision, 19,481.

Medical Services, 19,299 (page 403), 19,533.

Men—Cavalry Division :

- Quality of, 19,299 (page 402).

Rhodes, Mr. Cecil, and De Beers directors, horses provided by, 19,377.

Rifles, patterns of, 19,476.

Scouts, organisation and training of, suggestions as to, 19,299 (page 405), 19,485, 19,510, 19,519.

Arms and pay, 19,299 (pages 405, 406).

Signallers' Corps, formation of, 19,299 (page 402), 19,497.

Supplies of food and forage, 19,299 (page 403), 19,459.

Transport :

Light regimental transport with cavalry, provision advocated, 19,299 (pages 403, 404), 19,444, 19,456.

Supplies, transport for, adequacy of, 19,459.

Troops commanded by witness in South Africa, 19,299 (pages 401, 402), 19,301.

War Office Organisation :

Remount Department, 19,299 (page 403).

Supply services, 19,299 (page 403).

HAMILTON, MAJOR-GENERAL SIR BRUCE, K.C.B.
(See Questions, 17,448-17,548.)

Services of witness in South Africa, 17,448.

Artillery :

Officers, training, 17,527.

Range, quality and mobility of guns, 17,537.

Naval guns, 17,540.

Boers :

Artillery, 17,537, 17,544.

Intelligence, 17,468, 17,469.

Shooting, 17,477.

Colonial Troops :

Horsemanship and horsemastership, 17,466.

Intelligence, 17,469.

Engineer Services, 17,532.

Equipment :

Boots, 17,462.

Horses :

Supply, quality of, and wastage in South Africa, 17,532.

Imperial Yeomanry, second contingent :

Shooting, capacity as to, 17,462.

Training, 17,483.

Manœuvring Areas, provision, 17,530.

Men :

Quality of, 17,462.

Entrenching and cover, 17,468.

Horsemanship and horsemastership, 17,466.

Marching, 17,462.

Physique, morale, and intelligence, 17,468.

Shooting, 17,462, 17,477.

Training :

Shooting practice, short ranges near barracks advocated, 17,473.

Strength of companies, increase of, probable effect of upon training, 17,483.

Hamilton, Sir Bruce—continued.

Mounted Infantry :

Composition of columns commanded by witness in South Africa, 17,459.

Deficiency in numbers of mounted men with Ladysmith Relief Force, 17,453, 17,460.

Future organisation of, suggestions as to, 17,532, 17,534.

Qualities shown during the war by, and suggestions as to training, 17,466, 17,532, 17,535.

Non-commissioned Officers :

Duties of, 17,527.

Training, schools of instruction, 17,484.

Officers :

Promotion, 17,484.

Qualities, and suggestions as to training, 17,484, 17,514, 17,527.

Staff Officers :

Training and selection of, 17,527.

With witness in South Africa, 17,528.

Supply of higher grade officers during the war, deficiency of, 17,516.

Supplies, adequacy of, 17,532.

Troops in South Africa, strength of, views as to adequacy of, 17,453, 17,460.

HAMILTON, LIEUTENANT-GENERAL SIR IAN, K.C.B.,
D.S.O. (See Questions 10,857-10,940 and 13,839-14-134.)

Services in South Africa, 13,840, 13,849, 13,888, 13,903, 13,923, 13,938, 14,051, 14,057, 14,068.

Military Secretary at the War Office, 10,855, 13,848.

Army Organisation :

Efficiency and numbers of the Army, 13,941 (page 107), 13,953, 14,024, 14,075, 14,114.

Q.M.G. work, see sub-heading Officers—Staff Officers.

Artillery :

Field Artillery :

Comparison with Horse Artillery, 13,941 (page 111), 13,984, 13,986.

Range of field guns, 13,941 (page 111), 14,083.

Qualities shown during war by officers and men, and suggestions as to future artillery tactics, 13,941 (page 111).

Boers :

Attack and pursuit, their absence of vigour in, in earlier part of campaign, 13,869, 13,886, 13,941 (page 109).

Artillery, range of, 14,084.

Cavalry :

Arms, 13,941 (page 110).

Officers, selection, 13,941 (page 110).

Qualities, 13,941 (page 110).

Training, suggestions as to, 13,941 (page 110), 13,957.

South Africa or Canada, training in, suggested, 13,953, 14,025, 14,032, 14,078.

City Imperial Volunteers, quality of, 13,904, 13,952

Colonial Troops, quality of, 13,941 (pages 110, 111), 14,038, 14,049.

Commandeering, question as to payments, 14,017.

Compulsory service, and conscription :

Esprit de corps, probable effect on, 13,941 (page 108), 14,073.

Training, period necessary in event of, 14,100.

Engineers :

Qualities shown during the war, duties of Engineers, and suggestions as to future organisation, 13,941 (page 111).

Telegraphs, increase of stores of field telegraphs advocated, 14,052.

India :

Preparation of schemes in, 13,899.

Staff work, organisation in, 13,936, 14,087.

Transport, Punjaub Frontier Force, 14,045.

Manœuvring Areas in South Africa or Canada, views as to this suggestion, 13,958, 14,025, 14,032, 14,078.

Hamilton, Sir Ian--continued.

- Medical services, 13,941 (page 112), 13,990, 14,011, 14,129.
- Men, qualities shown during war by, and suggestions as to future training, and as to necessity for better selected, trained and educated class of soldier, under modern conditions, 13,941 (pages 107, 108, 109, 112), 13,942, 13,952, 13,978, 14,095.
- Discipline, 13,941 (page 108).
- Manœuvring Areas, *see that sub-heading*.

Military Operations :

- Alternative schemes of action in Natal, absence of, 13,888.
 - Attack and defence, advantages of, under modern conditions, compared, 13,941 (page 108), 13,945.
 - Ladysmith, defence of, 13,941 (page 109).
 - Action before Ladysmith, 30th October, effect of, 13,863, 13,867.
 - Section allotted to Witness, 13,853.
 - Wagon Hill, attack on, 13,874, 13,947.
 - Withdrawal to position behind the Tugela, questions as to possibility and advisability, 13,856.
 - Tactics, changes produced by modern conditions, 13,941 (page 107), 13,942.
 - Troops, strength of, *see sub-heading Troops*.
- Mounted Infantry :
- Command of by witness during the war, 13,842, 13,845, 13,903.
 - Qualities shown during the war, and suggestions as to future training, equipment and use of, 13,881, 13,903, 13,941 (page 111), 14,043.

Officers .

- Cavalry, 13,941 (page 110).
 - Education of candidates, 10,893.
 - Engineers, 13,941 (page 111).
 - Militia and Volunteers. supply of officers for, 10,883.
 - Reserve, suggestion as to, 10,892.
 - Mounted Infantry, 13,941 (page 111).
 - Promotions :
 - Outside influences, 10,919.
 - Procedure as to, 10,876, 10,930.
 - Reserve of officers, 10,883.
 - Staff officers :
 - Appointments, 10,925.
 - Qualities shown in the war, by, and suggestions as to training and Staff College. 13,932, 14,068, 14,087, 14,104, 14,122.
 - Quartermaster-General's work, 13,933, 14,087, 14,122.
 - Services of Witness as chief staff officer - to Lord Kitchener, 13,923.
- Ordnance Department, organisation of, views of Witness as to, 14,016.
- Pay, increase in, as inducement to recruiting. views as to advisability of. 13,941 (page 108), 13,954, 14,076.

Preparations for the war :

- Defence, schemes of, previously to the war, 13,889.

Rifle, pattern of, 14,086.

Supplies :

- Department for, views of Witness as to organisation of, 14,016.
- During march to Heilbron, 13,911.
- Surrenders, 13,941 (page 109), 13,972.

Transport (Land) :

- Advantages of regimental as compared with general transport, 13,941 (page 112), 14,008, 14,045, 14,047, 14,066.
- Department for, views of witness as to organisation of, 14,016.
- Troops in South Africa, strength of, views of witness as to adequacy of, 13,941 (page 109), 13,965.
- Uniforms, distinctions in, effect of on esprit de corps, 13,941 (page 110), 13,979.

War Office Organisation :

- Army Board, 10,864.
- Centralisation of work, excess of, 10,864.
- Military Secretary, duties of, 10,858.
- Ordnance Department, 14,016.
- Supplies, department for, views as to organisation of, 14,016.

HARRIS, VICE-ADMIRAL SIR R., K.C.B. (*See Questions* 18,956-19,095.

Admiral in Command at the Cape from 1899 to 1901, 18,956.

Admiralty :

- Instructions received from, 18,961, 18,997, 19,042, 19,071.
- Supplies of guns sent out by, adequacy of, 19,007.
- Transport system, satisfactory working of, 19,068, 19,092.

Artillery—Naval Guns :

Ammunition :

- Common shell and shrapnel, effectiveness of, compared, 17,065.
- Cordite, 19,058, 19,080, 19,082.
- Lyddite, 19,065.
- Effectiveness of guns and quality of gunnery, 19,056, 19,079.
- Erosion of old guns, and replacement by new guns, 19,057.
- Fuses, 19,064.
- List of guns and ammunition supplied to military authorities and Naval Brigade in South Africa during the war, 19,014.
- List of small guns and stores sent by witness to General Officer Commanding at the Cape, 18,983.
- Loss of seven-pounder muzzle-loading gun, 19,015.
- Telescopic sights, 19,067.
- Assistance offered by Naval Authorities, rejection, and subsequent request for, 18,978, 18,986.

Boers :

- Contraband of war, *see that sub-heading*.
- Preparations for the war, 18,962.
- Prisoners on board transports, 19,016.

Cape Colony, despatch of Naval Brigade and guns to: Cape Town, arrangements for protection of, 18,995.

Kimberley Relief Force, 18,992.

Stormberg, 18,986.

Coal supplies for ships during the war, 19,010.

Contraband of war—Stoppage of food and stores, extent of, 19,022.

Ammunition and artillery, 19,030, 19,086.

Gold, 19,045.

"Herzog" and "Bundesrath" cases, 19,044.

Manœuvring Areas in South Africa, provision of transports in event of formation of, 19,048.

Maputa River, expedition by witness to, previously to the war, 18,962, 18,965.

Marines, increase of, and use for small seaboard expeditions, views of witness as to this suggestion, 19,053.

Men of Naval Brigade :

Despatch of, to Natal and Cape Colony, 18,986, 18,995, 19,000, 19,008.

Reinforcements from home, 19,009.

Total number of men landed, 19,013.

Milner, Sir A., communication with, 18,960, 18,962, 18,965, 18,966, 18,967, 18,996.

Natal, despatch of naval guns and men to .

Buller, General, despatch to, 19,006.

Durban, protection of, 18,995, 19,001.

Ladysmith, 19,003.

Effectiveness of guns and gunnery, 19,060.

Pietermaritzburg, protection of, 19,001, 19,015.

Preparations for the war—Naval preparations at the Cape, 18,959, 19,071.

Privateers, untrue reports as to, 19,035.

Ships :

Disposition of, at the Cape, on outbreak of the war, 18,978.

Repair of, in preparation for the war, 18,966.

Strength of force at the Cape during the war. 18,974.

Stores, list of, sent by witness to General Officer Commanding at the Cape, 18,983.

Transport (Sea) :

Control of, by witness, extent of, 19,089, 19,095.

Detention of ships at the Cape as a military necessity, witness not cognisant of, 19,095.

Harris, Sir R.—continued.

Transport (Sea)—continued

- Disembarkations—accumulation of stores at Cape Town, 19,069, 19,077.
- Dry dock accommodation in South Africa, 19,073.
- Losses, delays, and demurrage charges, insignificance of, 19,093.
- Satisfactory working of system, 19,068, 19,091.

HARRISON, GENERAL SIR RICHARD, K.C.B., C.M.G.
(See Questions 1835-2059.)

Inspector-General of Fortifications since 1898, 1835.

- Boers, preparations by, for war, 1933, 2003.
- Commanding Royal Engineer, duties of, 1849.
- Equipment, Engineer, generally, 1846.
- Classification of, 1853.
- Pontoons, 1856, 1920, 1927, 1950, 1975, 1992, 2000, 2015, 2020, 2040, 2055.
- Officers responsible for, 1846.
- Purchase of, authority for, 1964.
- Railway plant, 1875, 1877, 1887, 1995, 2030.
- Search lights, 1902.
- Supply in the field, 1971.
- Telegraph stores, 1875, 2000.
- Inspector-General of Fortifications Department, duties as defined by Orders in Council, 1839.
- Ladysmith, defence of, 2035.
- Maps and surveys of rivers, 1975.

 - Pontoon troops, 1994.
 - Steam Road Transport Company, 1903.
 - Units sent out, 1904.
- Preparations for the war, 1849, 1930, 2003.
- Expenditure in connection with preparations, 2040.
- Natal, defence of, 2033.
- Reserve stores, 1869, 1873, 1877, 1891, 1919, 1923, 1968, 2000.
- War Office Organisation, 1935, 1971, 2014.
- Army Board, 1936.
- Commander-in-Chief's Committee, 1935.
- Inspector General of Fortifications, duties of, 1839.
- Railway Army Department, suggested creation of, 2051.

HILDYARD, MAJOR-GENERAL SIR H. J. T., K.C.B.
(See Questions 15,965-16,180.)

Services of witness in South Africa, 15,965, 16,180.

Army Organisation:

Efficiency and numbers of the Army, 16,019.

Artillery:

- Ammunition, 16,130.
- Cordite, 16,111.
- Lyddite, 15,972 (page 240), 16,109, 16,134.
- Range and pattern of guns, 15,972 (page 240), 16,103, 16,129.
- Tactics, 15,972 (page 240).

Auxiliary forces, qualities shown during the war by, 15,972 (page 238).

Boers:

- Entrenching:
 - Kaffirs employed in, 16,008.
 - Tools, 16,004.
- Shooting, quality as to, 15,982.

Cavalry:

- Arms, equipment, and use of, 15,972 (page 240), 16,116.

Colonial forces:

- South African Corps, 15,972 (page 238), 15,993.

Engineer Services, adequacy of, 15,972 (page 240).

Entrenching:

- Kaffirs, employment of, 16,009.
- Tools, 15,972, 16,002.
- (See also sub-headings Boers, and Men, quality of.)

- Equipment, 15,972 (page 239).
- Great coats, difficulties as to, 15,972 (page 239), 15,987.

Hildyard, Sir H. J. T.—continued.

Horses, qualities of, and wastage in South Africa, 15,972 (page 239), 15,995.

Manœuvring areas, provision, 15,977.

Medical services, adequacy of, 15,972 (page 240).

Men:

Pay, increase of, possible effect of, on quality of men, 16,021.

Qualities shown in the war, 15,972 (page 238).

Discipline, 16,017.

Entrenchments and cover, 15,972 (page 238), 16,002.

Horsemanship and horsemastership, 15,972 (page 238).

Marching, 15,972 (page 238), 15,986.

Physique, morale, and intelligence, 15,972 (page 239), 16,017.

Shooting, 15,972 (page 238), 15,982.

Training, 15,972 (page 240), 15,982, 16,007, 16,019, 16,121.

Employment in civil duties, effect of, upon training, 15,972 (page 239).

Second Infantry Brigade, training at Aldershot, 15,972 (page 238), 15,973.

Military operations in Natal:

- Colenso, battle of, loss of guns at, 16,143.
- Willow Grange, action at, 16,180.

Mounted Infantry, 15,972 (page 240), 16,116.

Non-commissioned Officers, supply and training of, 15,972 (page 239), 16,018, 16,032.

Officers:

Languages, qualification in, 16,087.

Promotion of young officers, 16,126.

Qualities shown during the war by, and suggestions as to training, 15,972 (page 239), 16,025, 16,127, 16,128.

Staff officers, qualities shown during the war, duties, and training—Staff College system, etc., 15,972 (page 239), 16,029.

Railways, control and repair of, 15,972 (page 240).

Reservists, quality of, 15,972 (page 239).

Supplies, general observations as to, 15,972 (page 239).

Transport (land), 15,972 (page 240).

Regimental and general transport compared, 16,099.

Troops in South Africa:

Quality of troops. (See sub-heading Men.)

Second Infantry Brigade, composition, strength, training, etc., 15,972 (page 238).

HILLS, MAJOR E. H., R.E. (See Questions 868-930.)

Service in Mapping Section of Intelligence Division, 868.

Maps issued to the troops in Natal, 922.

Survey and mapping work:

Comparison of that done in British possessions with that done in Colonial possessions by other Powers, 871, 893.

Staff engaged in, comparison of, 874, 875.

Cost of adequate survey in Colonial possessions, 874, 881, 905.

Staff suggested, 888, 891, 897.

With special regard to South Africa, 874.

HIPPISLEY, BREVET-COLONEL R. L., C.B., R.E. (See Questions 18,722—18,833.)

Director of Telegraphs throughout the campaign, 18,722, 18,728.

Attached to Home District for Telegraph purposes, and member of the Committee on the Telegraphic Organisation, 18,775.

Boers:

Damage done to telegraph system by, 18,727.

Telegraph material found in Transvaal and Orange Free State, value of, 18,764.

Hippisley, R. L.—continued.

- Cost of telegraphic messages sent during the war, 18,727, 18,762.
- Field Cable Lines, 18,727, 18,751.
- Allowance of field cable for an Army Corps, 18,831.
- Comparison of cable lines and aerial lines, 18,805.
- Cost of, per mile, 18,808.
- Extent of in South Africa, 18,727, 18,827, 18,804.
- Weight of, 18,832.
- (See also sub-heading, Supplies.)
- Financial arrangements, concentration at Bloemfontein and Pretoria, 18,727, 18,788.
- Foreign Telegraph Systems, collection of information as to, advocated, 18,778.
- Headquarters of Director of Telegraphs, 18,726.
- Lines of Communication Telegraphs, 18,727.
- Absence of satisfactory organisation for, before the war, and consequent withdrawal of men from field telegraph work, 18,727, 18,737.
- Organisation of telegraphs, present system, and suggestions for improvement, 18,727, 18,769, 18,787, 18,800.
- Telegraph divisions allotted to Army Corps, 18,727, 18,737 18,771, 18,800.
- Personnel :
 - Officers :
 - Assistant-Directors of Telegraphs, appointment, 18,727.
 - Commanding Officer, Telegraph Battalion, suggestion as to appointment and duties of, 18,727, 18,770, 18,800.
 - Director of Telegraphs, duties of witness as, during the war, 18,728, 18,743.
 - Divisions, command of, present system, 18,774.
 - Number of officers in South Africa, 18,786.
 - Strength of :
 - Before the war, 18,732.
 - During the war, strength in South Africa, 18,727, 18,731.
 - Drafts, 18,727, 18,736, 18,785.
- Preparations for the war—information as to Telegraph System in South Africa, question as to, 18,781.
- Railway Companies, wires belonging to, 18,743.
- Spion Kop, question as to whether cable might have been laid down, 18,816.
- Statement as to nature of Army telegraphs used during the war, number of messages sent, and extent of wire laid, 18,727, 18,802, 18,827.
- Supplies, 18,727, 18,791, 18,821.
- Material found in Transvaal and Orange River Colony, value of, 18,764.
- Material handed over to Colonial Governments at end of the war, value of, 18,767.
- Purchases in South Africa, 18,727, 18,792.
- Telephones, 18,727, 18,757.
- Blockhouses, provision for, 18,727, 18,761, 18,795.

HUNTER, LIEUTENANT-GENERAL SIR ARCHIBALD,
Lieutenant-General Scottish District, K.C.B.,
D.S.O. (See Questions 14,470-14,687.)

Officers :

Pay, 14,646.

Promotions, 14,627, 14,669.

From the ranks, 14,620.

Supply of, deficiency in, and suggestions for remedying that deficiency, 14,637.

Training, 14,618.

Horsemastership, training in, 14,592

Preparations for the War :

Defence scheme for Natal, 14,490.

Transport, 14,649.

Regimental and general transport, compared, 14,651.

Troops in South Africa, strength of, 14,564.

(See also Military Operations—Natal.)

JAMESON, SURGEON-GENERAL J., C.B., formerly
Director-General of the Army Medical Service. (See Questions 11,472-11,812.)

Civilian surgeons, 11,526.
Enteric, 11,713, 11,723, 11,738.

Equipment:

Bacteriological, 11,706, 11,710.
Disinfectants, 11,812.
Drugs and medical stores, 11,624, 11,636, 11,799.
Instruments, 11,610, 11,731, 11,805.
Officers responsible for, 11,607.
Storage and packing of stores, 11,631, 11,734, 11,807.

Establishment, basis of, 11,476.

Foreign armies, sickness in, 11,549, 11,569, 11,713.

Personnel:

Civilians, employment of, 11,526.

Nurses, female:

Appointment, 11,671.
Duties, training, qualities, etc., 11,649, 11,671, 11,714, 11,721.
Reorganisation of nursing service, 11,675.
Reserve, 11,676.

Officers, medical:

Arrangements as to, previous to constitution of Army Medical Corps in 1857, 11,687.
Promotions, 11,793.
Quality of, 11,746, 11,750.
Reserve of, 11,795.
Age standard during the war, 11,797.
Status and remuneration, 11,753.
Supply of, 11,531.
Deficiency in, 11,514.
Number attached to each brigade or regiment, 11,689.
Number, total, fixed in 1888, 11,476, 11,526.
Training, 11,570, 11,699, 11,738, 11,7-3, 11,783.

Orderlies:

Arrangements previous to constitution of Army Medical Corps in 1857, 11,681.
Private soldiers as, for home establishments when depleted by war, 11,523.
Quality of men, 11,720.
Supply of, 11,521, 11,534.
Increase, necessity for, 11,494, 11,661.
Applications for increase, 11,498.
Training, 11,647, 11,714, 11,780.

Sanitary officer, appointment advocated, 11,703.

Strength of Personnel:

At different stages of the war, 11,531, 11,535, 11,539, 11,564.
Before the war, 11,480, 11,500, 11,514.
Numbers required for an Army Corps, 11,539.

Sanitation, 11,728.

Sick and wounded, percentage of, 11,547, 11,558.

War Office:

Advisory Board, Medical, composition of, 11,744.
Army Board, applications for expenditure, reception of, 11,503, 11,632, 11,664.

JARVIS, LIEUT.-COLONEL A. WESTON, C.M.G., M.V.O.
(See Questions 7244-7274.)

Services at home and in South Africa, 7244, 7249.

Imperial Yeomanry:

First Contingent:

Equipment and stores, 7248.
Quality of men, 7246.

Second Contingent:

Mixing of county contingents, 7258.
Raising and organisation of, 7250.
Sharpshooters, raising and organisation of, 7251.
Age standards, 7253.
Elimination of men in South Africa, 7262.

Jarvis, A. Weston—continued.

Imperial Yeomanry—continued.

Second Contingent—continued.

Officers, selection of, 7251, 7261.
Quality of men, 7261.
Service as complete unit, 7257.
Shooting and riding test, 7253.
Training, 7260.

Yeomanry, Home:

Future organisation, suggestions as to, 7267.
Horses, provision, 7273.
Number of Yeomanry regiments, 7271.
Officers, 7272.

War Office Organisation:

Yeomanry Department suggested, 7273.

JOHNSTON, COLONEL W., A.M.S. (See Questions 4024-4068.)

Assistant Director of the Army Medical Service until May 31st 1901, 4024; services in connection with the war, 4028.

Mobilisation, medical, 4028, 4039.

Nurses, 4036, 4066.

Training of medical officers, 4049.

KEKEWICH, MAJOR-GENERAL R. G., C.B. (See Questions 21,853-22,049.)

Services of witness in South Africa, 21,853, 21,929.

Ammunition pouches and bandoliers, 21,853.

Boers:

Artillery, siege of Kimberley, 21,853, 21,909, 21,912.

Fuses, 21,915.

No serious attack on Kimberley made by, 21,890, 22,024.

Shooting, quality as to, 21,853, 21,948.

Colonial contingents, quality as to shooting, 21,946.
Horses, supply of, and wastage in South Africa, 21,853, 22,003.

Kimberley, Siege of, 21,853, 21,854.

Artillery, British, 21,853, 21,883, 21,917.

Range of guns, 21,919.

Bridge, Orange River, protection of, 21,864.

Casualties and deaths during:

Medical officer's report, 21,853, 21,920.

Roberts, Lord, despatch by, of 20th March, 1900, 21,907.

Medical personnel, 22,045.

Officer in command previously to appointment of Colonel Kekewich, 21,853, 21,856, 21,865.
Population during the siege, 21,853, 21,909.

Natives, population of, 21,910.

Preparations for the siege, secrecy of, 21,853, 21,857, 21,875, 21,895.

Rhodes, Mr. Cecil, relations with the military authorities, 22,028.

Scheme of defence, 21,853, 21,858, 21,887.

Trotter, Colonel, scheme prepared by, 21,858.

Supplies during, 21,853, 21,894, 21,900.

Troops comprising garrison, 21,853, 21,863, 21,866, 21,871, 22,041.

Cape Police, 21,866, 21,883.

Dutch included in, 21,869.

Statement showing total of officers and men on 26th November 1899, 21,853, 21,882.

Town Guard, 21,878.

Manœuvring Areas, provision, importance of, 21,853, 21,970, 22,021, 22,025.

Men:

Esprit de Corps and discipline, importance of, 21,853, 22,019.

Pay, increase advocated, 21,853, 21,957.

Quality:

Marching, 21,853, 21,954, 21,959.

Physique, 21,853, 21,955.

Shooting, 21,853, 21,938, 21,945.

Training, suggestion as to, 21,853, 21,953, 21,997, 22,021, 22,028.

Kekewich, Major-General—continued.

Mounted Infantry :

Organisation, system advocated, 21,994.
Training of men as advocated, 21,853, 21,991, 21,997.

Expenditure, 4518, 4704.
General organisation, 4535.
Schemes, initiation and consideration of procedure, as to, 16,953.

Secretary of State :

Position of, 4520.

Reference of questions to, 4676, 4710, 4778.

War Office Council, 4491, 4577, 4803.

Yeomanry, Home :

Cost of force, 4651, 4845.
Organisation, conditions of service, etc., 4652.
Strength, total, 4844.
Value of force, views as to, 4665, 4874.

KITCHENER OF KHARTOUM, GENERAL VISCOUNT, Commander-in-Chief in India, G.C.B., G.C.M.G. (*See Questions 159-263.*)

Ammunition, and artillery equipment, 186.

Boers in the field, number of, 256.

Contracts made in South Africa for supply of food and forage, 191.

Food and Forage, 190.

Horses, sources whence derived, qualities, treatment, most suitable size, recommendations as to future provisions, 204, 262.

Maps of South Africa, 160.

Medical service, 185, 244.

Men :

Qualities of, as to general training, shooting, marching, horsemanship, entrenchments, and cover, 173.

Supply of, 171.

Military operations up to the occupation of Pretoria ; witness prefers that this head of the reference should be dealt with by Lord Roberts, 231.

Military preparations for the war ; witness not cognisant of these, 160.

Number of troops which would have been necessary in 1899 to protect British territories in South Africa from invasion, 252.

Officers :

Colonial, 258.

Higher grades, difficulty of finding sufficient number of capable officers in, 174, 249.

Qualities, and opinion as to training, 174.

Staff work, training for, 175, 234.

Supply services :

Amalgamation suggested, 186.

No delay by War Office in sending supplies, 239.

Transport :

Distinct department, suggestion as to formation as, 186.

Railways, 219, 226.

Reorganisation in January 1900 ; 186, 219.

Steam road trains and motors, 219.

Sufficiency of transport, 240, 250.

War Office Organisation :

Pay Department, 218.

Railways, Department for suggested, 219.

Supply services, amalgamation suggested, 186.

KNIGHT, MAJOR WYNDHAM C., C.S.I., D.S.O.,
Deputy-Assistant Adjutant-General for Imperial Yeomanry in South Africa. (*See* Questions 7089-7243.)

Services at home and in South Africa, 7089.

Imperial Yeomanry in South Africa:

First contingent, raising and organisation of, 7092.

Age standards, 7108.

Equipment, 7095.

Officers, 7163.

Physique, 7112.

Quality of men as to shooting, riding, etc., 7103, 7151.

Second contingent:

Documents as to numbers, pay certificates, etc., not sent out with force, 7186.

Elimination of men in South Africa, 7122, 7238.

Numbers eliminated, 7123.

Experience of witness as to force in South Africa, 7114.

Mixing of county contingents, 7159.

Officers:

Elimination of, in South Africa, 7163.

Numbers eliminated, 7163, 7179.

Number of, 7163.

Quality of, 7163.

Selection of, 7163, 7165.

Quality of men, 7117, 7145, 7211.

Shooting and riding, quality as to, 7122.

Training in South Africa, 7134.

Horses, provision of, 7101, 7230.

Officers, 7195.

Pay system, 7186.

Period of service, terms of enlistment as to, 7223.

Quality of men, 7213, 7235.

Yeomanry, Home:

Future organisation, suggestions as to, 7098, 7193.

Officers:

Appointment of, 7197.

Registration of those who have served in South Africa suggested, 7194.

Pay system, 7193.

KNOX, MAJOR-GENERAL SIR CHARLES, K.C.B. (*See* Questions 17,549-17,768.)

Services of witness in South Africa, 17,549.

Army Organisation:

Strength of regiments at present time, 17,691.

(*See also sub-headings Cavalry and Mounted Infantry.*)

Army Service Corps:

Strengthening of corps, necessity for, 17,635.

Artillery:

Horses for, increased number advocated, 17,617.

Personnel, quality of, 17,616.

Horsemastership, 17,599.

Range, classes, and quality of guns, 17,643.

Boers:

Mobility, 17,564, 17,585.

Orange Free State Boers, rejoining commandoes after surrender, 17,557.

Shooting, quality as to, 17,572, 17,582, 17,747.

Cavalry:

Arms and use of, 17,580.

Equipment, lightening advocated, 17,612.

Officers, quality of, as to horsemastership, 17,599.

Knox Sir Charles—continued.

Colonial Troops serving under witness in South Africa, 17,586.

Quality of, 17,590, 17,681, 17,708, 17,729.

Compulsory Universal Military Training for period of six months, question as to, 17,724.

Engineer Services, 17,640.

Entrenching Tools, carrying in carts advocated, 17,648, 17,651.

Equipment:

Lightening of, and carrying portions of, in company carts advocated, 17,646.

Horses:

Quality, supply, and wastage of, in South Africa, 17,633.

Imperial Yeomanry serving under witness in South Africa, 17,586.

Quality of, 17,587, 17,715.

Second contingent, 17,588.

Intelligence Corps to be attached to each column, suggestion as to organisation of, 17,658, 17,665, 17,745.

Manœuvring Areas, provision, 17,607.

Maps, 17,664.

Medical Services, 17,640, 17,766.

Men:

Qualities shown in the war by, 17,616, 17,710.

Cover, 17,622.

Horsemanship and horsemastership, 17,578.

Initiative, individuality, and intelligence, 17,574, 17,619.

Marching, 17,564, 17,565.

Shooting, 17,572, 17,747.

Training:

Employment in civilian duties, effect of, on training, 17,695.

Period required for infantry, 17,718.

Suggestions as to, 17,579, 17,596, 17,597, 17,656.

Militia:

Quality of, 17,716.

Mounted Infantry:

Arms, training, and future organisation of, suggestions as to, 17,579, 17,580, 17,596, 17,669.

Deficiency in numbers of mounted men during the war, 17,560.

India, training of native troops, 17,677.

Organisation during the war, 17,576.

Qualities shown during the war, 17,574, 17,578.

Training on Salisbury Plain, new regulations, 17,673.

LANSDOWNE, THE RIGHT HON. THE MARQUIS OF, K.G., P.C., G.C.S.I., G.C.M.G., G.C.I.E., Secretary of State for Foreign Affairs. (*See Questions 21,073-21,590.*)

Secretary of State for War from 1895 to 1900, 21,073.

Army Organisation:

Army Corps:

Expenditure incidental to calling out an Army Corps, or portion of an Army Corps, provision for, 21,343.

Stanhope, Mr., minute of, 21,419, 21,423.

Compulsory universal military training, question as to, 21,339.

Expeditionary forces, organisation of, 21,341.

Linked battalions, system of, 21,313.

Militia, calling out of, Act of 1898 as to, 21,341.

Reserves:

Calling out of, powers as to desirable, 21,341, 21,379.

Value of, proved by experiences of the war, 21,334.

Short Service System:

Opposition to introduction of, 21,505.

Value of, as proved by experiences of the war, 21,334.

Strength and efficiency of the Army:

Steps taken to increase, between 1895 and 1899, 21,505.

Wolseley, Lord, proposals by:

Minute of 22nd February 1896, and minutes by Lord Lansdowne of 10th July and 5th December 1896, 21,305, 21,306, 21,307.

Minute of 3rd November 1897, and minutes by Lord Lansdowne of 12th November, 2nd December, and 15th December, 21,311.

Minute of 7th January 1899, 21,320.

Troops in South Africa, *see sub-headings* Preparations for the War and Troops.

Artillery:

Increase of field artillery and provision of quick-firing guns, 21,505.

Reserves of:

Facilities for making on emergency any type of guns, question whether preferable to holding large reserves of guns, 21,590.

(*See also* Supplies, reserves of.)

Auxiliary Forces:

Imperial Yeomanry, *see that sub-heading.*

Scheme for raising, formulation of, desirability of, 21,553.

Lansdowne, The Right Hon. The Marquis of—continued.

Barracks, provision of, difficulties as to, 21,323.

Boers:

Agents in England and on the Continent, 21,196.

Fighting value of, under-estimate of, 21,108, 21,347.

Military preparations by, 21,079, 21,104, 21,198, 21,215, 21,291, 21,356, 21,364, 21,365.

Numbers in the field, variations in estimates of, 21,104.

Orange Free State Boers, attitude of, and its effect on British military preparations, 21,118, 21,122, 21,201.

Buller, Sir R.:

Disposition of troops in South Africa, non-interference by Government as to, 21,255.

Mobilisation, minute of 6th July 1899 as to, 21,158.

Preparations for the war, *see that sub-heading*. Staff officers, appointment of, 21,252.

Warren, Sir C., appointment of, 21,253, 21,259.

Butler, Sir William, resignation of, 21,264.

Colonial Office, correspondence with War Office as to Boer military preparations, 21,289, 21,290.

Colonial Troops, decision of Government as to mounted men, in early stages of the war, 21,137.

Contracts, system of, 21,537.

South Africa, contracts made in, 21,540.

Documents handed in by Witness:

Army Organisation—Proposals for increase of strength and efficiency of the Army:

Minutes of 10th July and 5th December 1896, 21,305, 21,306.

Minutes of 12th November 2nd December, and 15th December 1897, 21,311.

Mobilisation, Minute of 12th August 1899, as to, 21,147, 21,207.

Supplies.—Reserves of Armament and Military stores, Minutes of 21st May and 4th October, 1900, as to, 21,280, 21,415.

Troops for South Africa, strength of:

Letters to Lord Wolseley of 20th and 27th August 1899, 21,201.

Minute of 3rd October 1899, 21,111.

War Office Reorganisation, Minutes of 31st October, 1895, and 8th May 1899, 21,425.

Equipment—Clothing:

Khaki serge substituted for khaki drill, 21,455.

Imperial Yeomanry in South Africa:

Quality of 1st and 2nd Contingents, 21,556.

Value of the force, 21,551.

War Office, relations with, 21,543.

India:

Schemes of military operations in, 21,242.

Supplies, reserves of, 21,280, 21,404.

Troops from, for service in South Africa, 21,161, 21,163, 21,201, 21,207.

Wolseley, Lord, minute of August 24th 1899 as to, 21,163.

Intelligence Department:

Expenditure, 21,350, 21,358.

Information as to Boer military preparations, 21,079, 21,119, 21,215, 21,289.

Cabinet, date at which information was laid before, question as to, 21,100.

Commander-in-Chief cognisant of, 21,389.

Fighting value of Boers, under-estimate of, 21,347.

Ladysmith, selection of, as a station, 21,265.

Maps, preparation of, difficulties as to, in South Africa, 21,360.

Mobilisation:

Period which would probably elapse between mobilisation of the Field Force and concentration in South Africa:

Minute by Lord Lansdowne of 12th August 1899 as to, 21,147.

Minute by Sir R. Buller of 6th July 1899 as to, 21,158.

Statutory regulations as to mobilisation of an Army Corps, 21,378.

Working in practice on occasion of the war, minute by Lord Wolseley of 13th January 1900, 21,208.

Lansdowne, The Right Hon. The Marquis of—continued

Officers:

Staff officers with Sir R. Buller; selection of, 21,252.

Warren, Sir Charles, appointment of, 21,253, 21,259.

Ordnance Factories—Buildings, store rooms, etc., inadequacy of, 21,280.

Pay, increase of, and abolition of stoppages, 21,322, 21,507.

Preparations for the War:

Buller, Sir R.:

Interviews with Lord Lansdowne before the war, 21,076, 21,121, 21,124, 21,139.

Minutes of 5th September 1899 to Lord Salisbury and to Lord Wolseley, 21,202, 21,210, 21,249.

Opportunities of expressing his views as to the campaign before it began, and of acquiring knowledge of political situation, 21,202, 21,234, 21,247, 21,406.

Consultations between Secretary of State, Commander-in-Chief, Heads of Departments, and Sir R. Buller as to, 21,076, 21,387.

Defence, local schemes of, in South Africa, 21,266.

Expenditure:

Date of authorisation of, 21,223, 21,300.

Estimate of, in minute of 12th August 1899, 21,147, 21,150.

Suggestion as to reserve fund for preparations, 21,373, 21,534.

Jameson Raid:

Effect of, in making preparations difficult, 21,352, 21,354, 21,363.

Question as to whether adequate preparations should not have been commenced immediately after the Raid, 21,215.

Mobilisation, *see that sub-heading*.

Plan of Campaign—No formal plan drawn up in the War Office, 21,234.

Political situation in relation to preparations, 21,148, 21,156, 21,159, 21,179, 21,210, 21,223, 21,300, 21,351, 21,368.

Relations between Military and the Government in period before the war, 21,207.

Responsibility for non-preparation, question as to, 21,417.

Supplies:

Importance of preparations, as to, 21,147.

Wolseley, Lord, minute of 1st September as to, 21,202.

Transport (Land):

Contract for purchase of mules, cancelling of, 21,210.

Importance of preparations as to, 21,147, 21,150, 21,204.

Transport (Sea):

Horse-fittings for ships, intimation from Admiralty as to, 21,147.

Troops for South Africa:

Before the war, increase of garrison in South Africa between 1896 and outbreak of the war, 21,099, 21,161, 21,163, 21,289, 21,394.

Buller, Sir R.:

Minutes of 6th July and 5th September, 1899, 21,113, 21,167, 21,199.

Minute of 12th August, 21,207.

Estimates of numbers necessary, 21,204, 21,212.

Lansdowne, Lord:

Letters of 20th and 27th August, 1899, to Lord Wolseley, 21,201.

Minutes of 12th August, 1899, 21,207.

No joint representation as to necessity for increase of garrison made to Secretary of State by his military advisers between 1896 and 1899, 21,387.

Lansdowne, The Right Hon. The Marquis of—continued.

Preparations for the War—continued

Troops for South Africa—continued.

Before the war, etc.—continued.

Wolseley, Lord :

Minute of 22nd February, 1896,
21,221, 21,289.

Minute of 12th August, 1899,
21,207.

Minute of 17th August, 1899,
21,165, 21,167, 21,200.

Minute of 5th September, 1899,
21,207.

Minute of 13th January, 1900,
21,208.

No proposals made by, between
Minute of 22nd February,
1896, and Minute of June, 1899,
21,289, 21,388

Field Force for South Africa :

Composition of Force, Minute by
Lord Wolseley of 8th June, 1899,
21,132.

Estimates of strength necessary,
21,108.

Butler, Sir W., estimate given in
letter of 10th May, 1899, 21,129.

Wood, Sir Evelyn, estimate by,
21,117.

Lansdowne, Lord :

Minute of 3rd October, 1899,
21,111.

Minute of 13th September, 1899,
21,113.

Wolseley, Lord :

Minute of 8th June, 1899, 21,108.
21,111, 21,118, 21,132, 21,179,
21,180, 21,234, 21,289.

Minute of 7th July, 1899, 21,118,
21,199.

Minute of 13th January, 1900,
21,208, 21,210.

Reserves, *see* Army Organisation.

Supplies, reserves of :

Brackenbury, Sir H., representation as to de-
ficiencies in 1899, 21,280, 21,325, 21,396,

Quality of, 19,557, 19,563.

Entrenching and cover, 19,557, 19,565.

Eyesight, 19,557, 19,587.

Intelligence, 19,557.

Marching, 19,684.

Kilt, effect of on, 19,557, 19,685.

Physique and morale, 19,557.

Shooting, 19,591.

Training, 19,557, 19,581, 19,690, 19,714.

Period necessary, 19,571.

Non-commissioned Officers :

Colour-sergeant, duties of, 19,697.

Quality of, 19,557.

Officers :

Pay responsibilities, 19,694, 19,709.

Quality of, as to initiative, and suggestions as to training, 19,688.

Pay System :

In the field, 19,694.

Regimental paymaster, appointment of views of witness as to this suggestion, 19,695, 19,709.

Macbean, Lieutenant-Colonel Forbes—continued.

Reservists with witness in South Africa :

Number of, 19,559.

Quality of, 19,564.

Rifle, quality of, 19,557, 19,599.

Sighting, 19,600.

Sanitation of camps and water, 19,677.

Supplies of food and forage :

Adequacy of generally, but deficiency as to salt and tea, 19,557, 19,670.

Transport, Regimental and General compared, 19,699.

Troops commanded by witness—1st Battalion Gordon Highlanders :

Division of battalion between Glasgow and Aberdeen, 19,708, 19,725.

India, Malta, and Egypt, battalion stationed in, at different periods, 19,557, 19,707, 19,731.

Services in South Africa, 19,555, 19,557, 19,558.

Strength of at present date, 19,707.

(See also subheadings, Men, Reservists, etc.)

MACKINNON, MAJOR-GENERAL W. H., C.V.O., C.B.

(See Questions 7361-7586.)

Appointment of witness, date of, 7455.

City Imperial Volunteers, raising and organisation of, 7364.

Ambulance, 7407.

Arms, artillery, and ammunition, 7473, 7479, 7570, 7586.

Artificers, deficiency of, 7446, 7566.

Classes from which recruited, 7413, 7420, 7545.

Cooks, insufficiency of, 7443, 7522.

Complete regiment raising, as, advantage of, 7409.

Composition of regiment, artillery, mounted infantry, and infantry, 7392.

Date of leaving England, 7390.

Date of return, 7406, 7492.

Drill, previous experience of men as to, 7487.

Equipment, 7382, 7408, 7473.

Boots, quality of, 7383, 7476, 7549, 7581.

Horses, provision of, 7401, 7407, 7496.

Cost of, 7499.

Quality of horses, 7534.

Married men :

Enlistment of, 7376, 7438, 7442.

Pay allotment, 7440.

Medical tests, 7377.

Non-commissioned officers, 7423, 7455, 7464, 7537.

Quality of, 7540.

Officers, 7394, 7423, 7460.

Quality of, 7471, 7540.

Pay :

Allotments, 7440, 7520.

Amount of, 7560.

Difficulties as to paying in the field, 7576.

Period of service, terms of enlistment as to, 7489.

Quality of men, 7377, 7394, 7558, 7578.

Marching, quality as to, 7542.

Riding and horse-mastership, quality as to, 7500, 7530.

Sanction of Commander-in-Chief for raising of regiment, 7366.

Strength, total, 7391.

Transport, provision, 7407.

War Department :

Assistance and encouragement from, 7473.

Preference of C.I.V.s for dealing with Civil Authorities, 7430, 7517, 7532.

Work of regiment in South Africa, 7399, 7404.

Volunteers, future organisation of, suggestions as to, 7410.

Artificers, reserve of, 7446.

Complete regiments and Service Companies, advantages compared, 7409, 7415, 7503, 7555.

Equipment, 7436.

Married men, enlistment of, 7438.

Officers and staff, appointment, 7423, 7431, 7457, 7510.

Scheme for summoning Volunteers in future emergency, desirability of, 7423, 7457.

MAJOR, MR. ALFRED. (See Questions 6296-6450.)

Director of Army Contracts, 6296. Duties of office, 6298.

Contracts :

Decentralisation of, question as to, 6379.

Director of Contracts, contracts made by, during war, 6302.

Meat contracts, 6347, 6413.

Representation of the Contract Department at seat of war, question of, 6403.

Staff of Department, insufficiency during war, 6312.

Supplies :

Increase of purchases from the trade during the war, 6322.

Medical stores, how bought, 6444.

Ordnance stores, extent of purchases in South Africa, 6391.

Sources of supplies, 6341.

Tinned meat, 6329.

MARSHALL, SIR G. H., K.C.B., B.A., Commanding Royal Artillery, 1st Army Corps, Aldershot. (See Questions 18,491-18,619.)

General Officer Commanding the Royal Artillery in South Africa, 18,491.

Ammunition :

Committee at Pretoria—Reports of Artillery Officers as to effectiveness of various kinds of ammunition, 18,536.

Common shell and shrapnel :

Effectiveness of, compared, 18,524.

Reasons for abolition of common shell, 18,533, 18,545.

Cordite, 18,616.

Distribution in the field :

Difficulties arising from different classes of guns in South Africa, 18,510.

System adopted in South Africa, 18,512.

Expenditure of, in South Africa, statement as to, 18,517.

Lyddite, 18,510.

Supplies, adequacy of, 18,512, 18,517.

Weight of projectile of 4.7 guns, 18,569.

Boers, use of artillery by :

Captured British guns, 18,494, 18,612.

Ammunition for, manufacture of, 18,496.

Classes, number, range, and effectiveness of guns, 18,493, 18,517, 18,522, 18,549, 18,562.

Tactics, 18,523, 18,596.

Classes, number, range, and effectiveness of guns, 18,493.

Advantages of heavy guns not recognised before the war, 18,567.

Future armament, proposals as to, 18,508, 18,556, 18,613.

Under scheme of 1901, 18,245, 18,249, 18,310.

Compulsory Militia service, suggestion as to, 18,254, 18,272.

Compulsory universal military training, views as to, 18,256, 18,264, 18,272, 18,306.

General Staff, division of duties by Regulations of 1889 and 1895, and under organisation of 1901, 18,189, 18,210.

Objects of military organisation as laid down in Mr. Stanhope's Memorandum of 1st June 1891, 18,245, 18,247.

Strength which is, and should be, available for foreign service, views of witness as to, 18,245, 18,249, 18,271, 18,292, 18,303.

System before the war, 18,245, 18,246.

Army Service Corps:

Officers of, in charge of transport, 18,169.

Auxiliary Forces:

Militia, see that sub-heading.

Scheme for organisation of:

Formation by War Office of a scheme based on experiences of the war, question as to, 18,277.

Suggestion by witness as to organisation, equipment, and training in peace time, 18,245, 18,294.

Use of, in event of war with first-rate European Power, question as to, 18,294, 18,303.

Defence Committee of the Cabinet, 119, 435, 18,286, 18,295, 18,317.

Defence schemes, 358.

Documents relating to the war, 63, 84, 158, 265, 303, 346, 430, 449.

Equipment, Entrenching tools, etc., transport for carrying, 18,313.

Field Intelligence Staff in South Africa, 335, 373.

India:

Commissary-General-in-Chief, duties of, 18,206.

Intelligence Department, 18,296.

Movement of troops, responsibility for, 18,222.

Quartermaster-General, department of, 18,189, 18,206.

Transport systems, 18,141, 18,145.

Committee on, 18,174.

Maps of South Africa, difficulties with regard to, 132.

Militia:

Compulsory Militia service, suggestions as to, 18,254, 18,272.

Foreign service, making liable for, views as to, 18,258, 18,267.

Officers, 18,263.

Officers—Staff Officers:

Training and duties of, 18,189.

Transport (Land):

Assistant Adjutant-General for Transport, appointment in South Africa, 18,166.

Director of Transport in South Africa, appointment of witness as, 18,134.

Entrenching tools, equipment, etc., transport for, 18,313.

Non-commissioned officers, 18,183.

Officers:

Provision, future organisation as to, 18,170, 18,172, 18,177, 18,180.

Qualities shown by, during the war, 18,169.

Regimental and general transport, advantages of, compared, 18,140.

Reorganisation under Lord Roberts, 18,138.

System adopted in later stages of the war, 18,165.

War Office organisation in relation to transport, 18,167, 18,171.

Nicholson, Sir W. G.—continued.

War Office Organisation :

Adjutant-General, position of, 18,189, 18,197.
Army Board, 11, 58, 60, 78, 95, 104, 283.
Commander-in-Chief, position of, 18,189, 18,197, 18,199, 18,228.
Constitution of War Office, general changes effected under Order in Council 4th November, 1901, 6, 77.

Intelligence Division :

Creation in 1873, 18,189.
Duties of, 340, 356, 365, 369, 382, 399, 438.
Comparison with duties of General Staff in Germany and France, 366, 393.

Increase of staff, proposals for, 276, 289, 325, 363.

Officers of, how selected, 396.

Present staff, 318, 389, 441.

Section of the Intelligence Division, 311.

Joint Military and Naval Defence Committee, 268.

Mobilisation and Intelligence Department :

Amalgamation of the two departments
Order in Council, 4th November, 1901,
Position and duties of Department, 18,194, 18,279.
Staff, increase of, necessity for, 18,286, 2107.

Amount allotted to, in Estimates (1903), 18,288, 18,296.

Mobilisation Division :

Commander-in-Chief's position with regard to, previously to Order in Council, 4th November, 1901, 405.

Duties of, 344, 387, 412.

Increase of staff proposed, 417.

Present staff, 409.

Ordnance Committee, 285.

Quartermaster-General's Department :

Position and duties of, 18,172, 18,189, 18,190, 18,223, 18,228.

Secretary of State, position of, 18,231.

Troops, movement of, department responsible for, 18,189, 18,194, 18,201, 18,211.

Army Corps, movements of units, 18,220.

War Office Council, constitution and duties of, 14, 47, 59, 61, 82, 87, 95, 114, 265.

Witnesses, suggestions as to, 26, 72, 93, 126, 151.

NOBLE, SIR ANDREW, BART., K.C.B., Chairman of the Armstrong Company. (See Questions 20,828-20,904.)

Ammunition :

Common shell, 20,864, 20,889.

Composition of various explosives, 20,875.

Cordite, 20,888.

Effectiveness of different kinds of ammunition, 20,864, 20,876.

Lyddite :

Composition of, 20,875.

Detonation of, use of a fulminate prohibited, 20,864, 20,872, 20,876.

Shrapnel, 20,864, 20,857, 20,889.

Supplies of :

Condition as to, on outbreak of the war, 20,835.

Elswick firm :

Power of production, 20,857.

Supplies by, during the war, 20,835.

Artillery :

Elswick Battery, 20,847, 20,885, 20,892.

Range and weight of guns, 20,852.

Naval guns, 20,871, 20,882.

7.5 guns, 20,893.

Range of guns, effect of atmosphere upon, 20,895.

Supply of :

Arrangements with Elswick Company, 20,846, 20,849, 20,861, 20,898.

Power of production of field and heavy guns by Elswick Company, statement as to, 20,856.

Reserves, exhaustion of, 20,835.

Small arms, manufacture of, by Elswick firm, 20,902.

Velocity of guns, 20,900.

Noble, Sir Andrew—continued

Boers—Artillery :

Purchase of, 20,829.

Range, weight, and mobility of Long Toms, 20,854, 20,855.

Germany, reserve fund for military expenditure, 20,832.

Preparations for war :

Expenditure in connection with, reserve fund for, suggestion as to, 20,832, 20,840.

Representations made to War Office as to purchases of artillery by Boers, 20,829.

Rifles, range of, 20,903.

Ships—Battleships, cruisers, torpedo boats, etc., powers of production of Elswick firm, 20,857.

O'GRADY-HALY, MAJOR-GENERAL R. H., C.B., D.S.O. (See Questions 8343-8597.)

Command of Dominion Forces from July 1900 to July 1902, 8344, 8451.

Arms, ammunition and artillery :

Manufacture in Canada, 8449, 8503, 8585.

Rifles, Government contract for, 8507.

Reserves of, 8597.

War Office, provision by, 8585.

Coal supply for navy from Canada, question as to, 8579.

Compulsory service in Canada, enforcement of Militia Act advocated, 8435, 8439.

Contingents, Canadian, for service in South Africa, 8343, 8348.

First contingent, raising and organisation of, 8348.

Second contingent (Canadian Mounted Rifles, First Regiment), raising and organisation of, 8376.

Strathcona's Horse, raising and organisation of, 8390, 8399.

South African Constabulary, raising and organisation of, 8401.

Third contingent (Canadian Mounted Rifles, 2nd Regiment), raising and organisation of, 8411.

Fourth contingent, raising of, 8417.

Acceptance by home authorities of offers of contingents, 8348.

Casualties, 8363, 8381, 8399, 8406, 8411.

Dates of sailing, 8357, 8380, 8399, 8402, 8411, 8420.

Equipment, 8357, 8380, 8397, 8402, 8411.

Arms, artillery and ammunition, 8502.

Clothing, and especially boots, quality of, 8500.

Expenses, how defrayed, 8382, 8396, 8412, 8405.

Field Hospital, 8416.

Horses, provision and cost of, 8388, 8582.

Militia, men drawn from, 8427.

Number of contingents organised by witness, 8491.

Officers, provision, 8424, 8464.

Pay, 8384, 8398, 8407, 8415.

Physique of men, 8498.

Strength, total, 8421, 8545.

Transport by sea, 8380.

Horses, Canadian :

Quality of, 8559.

Remount depôts for Imperial service, question as to, 8559, 8579.

Imperial forces in Canada, 8452.

Interchange of battalions between Canada and Home Country, question as to, 8557.

Medical units and field hospitals, 8457.

Militia, Canadian :

Allowance, 8519.

Medical units, 8458.

Mounted rifles, increase in number of, 8493.

Officers, training of, 8444, 8549.

Quality of men, 8488.

Strength of, 8424, 8460.

Terms of enlistment, 8430, 8433.

Training, 8429, 8487.

Mounted police, 8462.

Men drawn from for service in South Africa, 8464.

Officers, training of, at Royal Military College, Kingstown, 8466.

O'Grady-Haly—continued.

Permanent Dominion Force, 8456.

Composition of, 8481.

Discipline identical with that of Regular forces in England, 8484.

Officers:

Appointment of, 8595.

Number of, 8592.

Training at Military College, Kingstown, 8594.

Pay, 8513.

Quality of men, 8485.

Strength of, 8424, 8480.

Quality of Canadians, as to physique and shooting, 8495, 8498.

Rifle clubs, establishment of, 8537.

Scheme proposed by Sir George French, for Colonial Reserve, comments on, 8523.

Scheme for providing Canadian Colonial Reserve, 8434, 8526.

Compulsory service under Militia Act, 8435, 8528.

Number of men to be raised, estimate of, 8531, 8540.

Officers, provision, 8548.

Pay or additional inducements not to be granted, 8532.

Supplies of flour and other provisions from Canada, question as to, 8576.

OGSTON, PROFESSOR ALEXANDER, C.M. (*See Questions 10,941-11,264.*)

Professor of Surgery at Aberdeen, 11,166; experience as to foreign Army Medical Services, 10,945; experience in South Africa, 10,942, 10,946, 10,950.

Ambulance wagons, 11,103.

Colonial Contingents, medical equipment, 11,138, 11,157, 11,230.

Equipment, Medical, 10,956, 11,027.

Bacteriological Departments, absence of, 11,014, 11,027.

Disinfectants, supply and use of, 10,997, 11,033, 11,064.

Dressings, 11,049, 11,072.

Drugs, 11,049, 11,156, 11,258.

Hospital tents, 10,963.

Size of, 10,964.

Huts, portable, advocated, 11,104.

Instruments, 11,014, 11,033.

Lights, 11,030.

Packing of stores, 11,051.

Splints and other apparatus, 11,046, 11,050.

X-Rays, 11,027.

Establishment, basis of, 10,946, 11,072, 11,235.

Hospitals, Military:

Civil population, treating in, advocated, 11,011.

Number and equipment of, 11,010.

Personnel, Medical:

Civilians, relations with Army Medical Department, 11,025, 11,074.

Cooks female advocated, 11,134.

Dental surgeons, provision in the field advocated, 11,228.

Instrument makers and electricians, absence of, 11,029.

Nurses, female, employment and value of, 11,132, 11,140.

Reserve of, suggestion as to, 11,253.

Training, 11,202, 11,248.

Officers (Medical):

Military officers, views of, as to efficiency of civilian and Army medical officers, 11,219.

Reserve of civil practitioners, suggestion as to, 11,168.

Status and remuneration, 11,123.

Supply of, 10,949, 10,955, 10,982, 11,242.

Number required for adequate supply, 11,148, 11,160, 11,176.

Training:

Account, general, of present system, 11,221, 11,236.

Ogston, Professor A.—continued.

Personnel, Medical—continued.

Officers (Medical)—continued.

Training—continued.

Defects in, and improvements suggested, 11,012, 11,041, 11,105, 11,120, 11,145, 11,182, 11,257.

Orderlies:

Cooking by, 10,999.

Qualities of men, 10,996, 11,091.

Supply of, 10,949, 10,955, 10,989.

Number required, 11,176.

Training, defects in and improvements suggested, 10,995, 11,003, 11,091, 11,113, 11,145, 11,207, 11,244.

Account, general, of training in hospitals, 11,114.

Period of training for male nurses, 11,174.

Sanitary officers, special, advocated, 11,223.

Physique of regiments, 11,137.

Sanitation, defects in, and improvements suggested, 11,090.

Sickness in Army Medical Corps, 11,136.

Transport, for medical purposes:

Ambulance wagons, 11,103.

Hospital trains, 11,081.

Voluntary aid:

Attitude of Army Medical Department as to, 11,073.

Organisation suggested, 11,078.

PAGET, MAJOR-GENERAL A. H., C.V.O. (*See Questions 16,396-16,539.*)

Services of witness in South Africa, 16,396.

Command of 1st Brigade at Aldershot, 16,533.

Artillery:

Ammunition—Common shell and shrapnel, 16,520.

C.I.V. Battery, 16,428, 16,520.

Elswick guns, 16,433.

Naval guns, 16,525, 16,530.

Range and quality of guns, 16,519.

Boers:

Artillery, 16,519.

Shooting, quality as to, 16,440.

Horses, supply of, and wastage in South Africa, 16,501.

Men:

Qualities shown during the war, 16,408, 16,423.

Horsemanship, marching, physique, and morale, 16,465.

Horsemastership, 16,467.

Intelligence and initiative, 16,472.

Shooting, 16,439.

Training, suggestions as to, 16,457, 16,475, 16,528.

Military Operations:

Lindley, march to, and occupation of, 16,405.

Officers:

Mixed irregular troops, appointment of officers for, 16,425.

Qualities shown during the war by, 16,493.

Initiation and readiness to take responsibility, deficiency in, and suggestions for training in, 16,479, 16,532.

Staff Officers:

Qualities shown by staff with witness in South Africa, 16,494, 16,498.

Training and qualification, 16,496.

Rifles, quality of, 16,518.

Supplies:

Lindley, supplies at, 16,409.

Sufficiency and adequacy of food supplies, 16,517.

Transport (land):

Motor cars, use of oil motors advocated, 16,536.

Traction engines, 16,411.

Troops in South Africa:

Composition of force under witness at Lindley, 16,423.

PENTON, LIEUT.-COLONEL A. POLE, R.A. (*See Questions 8598-8694.*)

Commandant of Forces in New Zealand from October, 1896, to October, 1901; 8599.

Arms and ammunition, reserve supplies, 8658.
Compulsory service, law as to, in New Zealand, 8686.

Contingents sent from New Zealand for service in South Africa, 8599.

Acceptance by Imperial authorities, and decision as to character of troops, 8600.

Age standards, 8604.

Character and composition of, 8601.

Equipment, 8604.

Artillery, 8606.

Expenses, how defrayed, 8606, 8609, 8624, 8633.

Horses, 8604, 8635.

Total number sent out, 8639.

Medical Tests, 8644.

Number of contingents sent out, 8599.

Officers, 8627, 8691.

Pay, 8613, 8624, 8633.

Allotments to married men, 8670.

Quality of men, 8604, 8625, 8640.

Classes from which men were drawn, 8643.

Reports as to conduct in South Africa, 8642, 8671.

Riding tests, 8644.

Strength of, 8606, 8607, 8635.

Total strength, 8639.

Terms of enlistment, 8612.

Fifth contingent, special terms, 8633.

Period of service, 8668.

Fortified positions in New Zealand, garrisoning of, 8677, 8687.

Officers, training, and appointment of, 8630, 8666, 8692.

Permanent Force:

Composition and strength of, 8616, 8618.

Fortified positions garrisoned by, 8678.

Scheme for providing Colonial Reserve for Imperial service, 8649.

School of Military Instruction, 8630.

Volunteers:

Fortified positions, garrisoning of, 8678, 8687.

Men drawn from, for service in South Africa, 8604, 8615.

Training, 8621, 8687.

PITT, CAPTAIN FRANCIS J., R.N. (*See Questions 9782-9884.*)

Duties as Naval Assistant to the Director of Transports, 9783.

Transport by sea:

Accommodation of troops, 9811, 9816, 9849

Space allowed, 9817, 9820, 9846, 9857.

Admiralty:

Preparations for the war, 9809, 9833.

Registration and inspection of vessels suitable for transport, 9785, 9789, 9811.

Satisfactory working of system 9513, 9867, 9884.

Colonial troops, transport of, 9844.

Fittings of ships, 9789, 9809, 9840.

Horses, transport of:

Accommodation—space allowed, 9820.

Cattle boats, use of, for, 9789, 9801, 9807, 9851.

Exercise on board, 9805.

Fittings, new, provision of, 9793, 9804, 9836, 9863.

Hospital ships, provision, 9856.

Losses and delay caused by accidents, 9824, 9854.

Prisoners, transports used as depôts for, 9859.

Statement by witness as to general arrangements for transport during the war, and suggestions as to the future, 9884.

PLUMER, MAJOR-GENERAL H. C. O., C.B. (*See Questions 17,945-18,132.*)

Services of witness in South Africa, 17,945.

Armoured trains, 17,950, 18,047.

Artillery:

Canadian battery, 17,950, 17,976, 17,984, 17,992, 18,065, 18,116.

Effectiveness of pom-poms, 18,067, 18,111.

Field glasses, equipment, 18,072.

Range, quality, and numbers of guns, 17,950, 18,047, 18,061.

Boers:

Numbers in the field, 17,950.

Shooting, quality as to, 17,993.

Colonial Forces:

Australian, 17,950, 17,951.

Officer Commanding New South Wales contingent, 17,986.

Quality of men, 17,976, 18,044, 18,115.

Dismissal, power of Commanding Officer as to, 17,968.

Memorandum with regard to raising and organisation of, no instruction received by witness as to drawing up, 17,966.

New Zealand troops, quality of men, 17,932, 17,976, 18,114.

Non-commissioned officers, provision, 17,961, 17,964.

Officers, provision from Imperial Army, 17,959, 17,962, 17,968, 17,982, 18,003, 18,117.

Education, 18,113.

Horsemanship and horsemastership, 18,003, 18,044.

Physique, morale, and intelligence, 18,005, 18,012.

Shooting, 17,991.

South African Colonials, 17,949, 17,950, 17,951, 18,057.

Non-commissioned officers, 17,961.

Officers, provision, 17,950.

Quality, 17,957, 18,001, 18,005, 18,057.

Terms of enlistment—pay, and period of service, 17,958.

Engineer Services, 18,057.

Horses:

Quality and price of, 18,034.

Wastage in South Africa, 18,041, 18,106.

Medical Services, 18,053.

Men:

Quality of:

Entrenching, 18,010.

Horsemanship and horsemastership, 18,002, 18,003, 18,042, 18,096.

Intelligence and initiative, 18,095.

Shooting, 17,990, 17,993.

Training, suggestions as to:

Cooking, training in, 18,012.

Employment in civilian duties, effect of on training, 18,014.

Entrenching, 18,010.

Intelligence and initiative, cultivation of, 18,005.

Mounted infantry, training as, 18,081.

Scouting, 18,012.

Military Operations in Rhodesia:

Statement by witness as to, 17,948.

Mounted Infantry:

Training and future organisation, 18,081.

Native pioneers, employment of, with Rhodesian force, 18,060.

Officers:

Colonial forces (*see that sub-heading*).

Pay responsibilities and accounts, release from, advocated, 18,020, 18,121.

Qualities and suggestions as to training, 18,020, 18,108.

Staff officers, qualities, duties, and training, 18,024.

Plumer, Major-General H. C. O.— continued.

Rifles, Quality of, 18,080.

Scouts :

Organisation as distinct corps, question as to, 18,125.

Telescopes and field glasses, equipment, 18,073.

Signallers, 18,103.

Supplies, adequacy of, supplies collected in Rhodesia before the war by Colonel Nicholson, 18,028.

Transport (Land), 18,050, 18,130.

Troops serving under witness in South Africa, 17,950, 17,951, 18,094.

(See also sub-headings Colonial Forces and Men.)

POLE-CAREW, MAJOR-GENERAL SIR REGINALD, K.C.B., C.V.O. (See Questions 16,540-16,624.)

Service of witness in South Africa, 16,540.

Army Organisation :

Efficiency and numbers of the Army, 16,590.

Foreign Service, liability for, effect of, on recruiting for the Guards, 16,569.

Mounted Infantry, *see that sub-heading.*

Artillery, range, and quality of guns, 16,614

Naval guns, 16,614, 16,617.

Rifles, quality of, 16,614.

Colonial Forces, qualities shown during the war by, 16,587, 16,624.

Horses :

Quality of, 16,610.

Supply of, and wastage in South Africa, 16,552, 16,610.

Manœuvring Areas in South Africa, views as to this suggestion, 16,571.

Men :

Education and class, 16,589.

Qualities shown during the war by, 16,559.

Entrenching and cover, 16,600.

Horsemanship and horsemastership, 16,594.

Intelligence and initiative, 16,569, 16,583.

Physique and morale, 16,567, 16,600.

Shooting and marching, 16,594.

Training, suggestions as to, 16,595, 16,599

Military Operations :

Kimberley Relief Force :

Route taken by, 16,545.

Strength of, inadequacy of, 16,543.

March from Paardeberg to Bloemfontein, 16,550.

Mounted Infantry :

Deficiency in numbers of mounted men in earlier stages of the war, 16,543, 16,550.

Organisation, defects of, and suggestions as to, 16,595.

Officers :

Qualities shown during the war by, 16,578, 16,601.

Staff officers :

Qualities of, and suggestion as to constitution of a General Staff, 16,601.

Training, 16,604.

Reservists :

Proportion in each regiment, effect of, upon discipline, 16,559.

Quality of, 16,567, 16,569.

Rifles, quality of, 16,614.

Supplies of food and forage, 16,552, 16,556, 16,610.

Troops in South Africa :

Strength of, at different periods of the war, 16,544, 16,549.

Volunteers, quality of, 16,587, 16,593, 16,619.

RICHARDSON, COLONEL SIR W. D., K.C.B. (See Questions 3367-3588.)

Deputy Adjutant-General for Supplies in South Africa from September, 1899 ; duties, control over all Army Corps services, 3370.

Army Service Corps :

Arrival of, effect upon situation, 3420.

Personnel, 3424.

Commandeering supplies, 3376, 3508.

Equipment :

Baking troughs, 3451.

Harness, 3444, 3520.

Supplies and transport, separation of services by Sir R. Buller, 3418, 3549 ; by Lord Roberts, 3482.

Supplies of foodstuffs, forage, etc. :

Carrington's force, supplies to, 3489.

Contracts with Cold Storage Company, 3391.

Hospital supplies, 3493.

In October, 1899, supplies in South Africa, 3374, 3382.

Meat and other supplies, 3389, 3402.

Prices in South Africa, 3502.

Quality of supplies furnished by War Office, 3497, 3528, 3555, 3577.

State of supplies on arrival of Sir R. Buller at Cape Town, 3405.

Transport (land) :

Advance of Lord Methuen, transport on, 3456, 3472, 3516.

Mule and ox transport compared, 3455, 3480, 3515.

Reorganisation by Lord Roberts, 3455, 3473, 3559, 3565.

Transport (sea), 3432, 3533.

Disembarkation of stores, 3433, 3530, 3557.

RIMINGTON, BRIGADIER-GENERAL M. F., C.B., Lately Commanding Rimington's Guides. (See Questions 12,608-12,824.)

Services of witness in South Africa, 12,608, 12,755.

Arms for Colonial mounted troops, suggestions as to, 12,691, 12,707.

Artillery, 12,766.

Australians :

Bayonets, use of, 12,702, 12,791.

Horsemanship and horsemastership, 12,707, 12,776.

Horses, 12,788.

Cavalry, value of, compared with mounted infantry, 12,727.

Discharge of men in the field, 12,755.

Horsemastership, suggestions as to, 12,652, 12,750.

Maps, use of, 12,627.

Officers for Colonial Corps, suggestions as to :

Selection of, 12,759.

Training at Military Colleges, value of, 12,744, 12,769, 12,812.

Rimington's Guides, raising and organisation of, 12,610.

Age standards, 12,640.

Casualties, 12,816.

Discharge of men in the field, 12,637.

Discipline, change as to field imprisonment, 12,752, 12,810.

Dutchmen and Uitlanders joining corps, 12,612.

Equipment, 12,734.

Arms, 12,684, 12,774.

Saddles and harness, 12,653, 12,735.

Health of corps, medical officer, etc., 12,818.

Horsemastership, system of, 12,652, 12,750.

Horses, 12,644, 12,760.

Weight carried by :

Kit, 12,654.

Man, average weight, 12,660.

Non-commissioned officers, 12,748.

Officers :

Horse management, 12,651.

Selection of, 12,641, 12,650, 12,741.

Quality of men, 12,636, 12,755.

Comparison with Regular cavalry, 12,727.

General qualifications as scouts, 12,626.

Rimington, Brigadier-General, M. F.—continued.

Rimington's Guides—continued.

Scouting, system adopted, 12,725.

Strength of corps, 12,633, 12,800.

Shooting, riding, and medical tests, 12,632.

Training, 12,621.

Transport, 12,682, 12,802.

Water-carts, 12,738.

Telescopes and binoculars, use of, in scouting, 12,711.

Training of Colonial Mounted troops, suggestion as to, 12,707, 12,797.

Yeomanry, Home, quality as to horsemanship, 12,709.

ROBB, COLONEL F. S., M.V.O. (See Questions 4389-4471.)

Assistant Adjutant-General. Deputy-Assistant Adjutant-General at Headquarters to 31st December, 1901; 4389.

Imperial Yeomanry in South Africa, 4417.

Men:

Drafts for South Africa, 4444.

Wastage in the Army, 4452, 4462.

Mobilisation:

Emergency Forces, question of mobilising, 4426.

Progress of, in October 1899; 4399.

Mounted Infantry, 4428.

Volunteers:

City of London, 4403.

Reserves, proposals, 4416.

Volunteer Service Companies, 4403.

War Office Organisation:

Adjutant-General's Department, duties of, 4392.

Clerks, substitution of military, for civil, 4441.

Correspondence of public with War Office, a cause of over-centralisation of, 4429.

Dawkins' Committee recommendations, 4439.

Yeomanry, Home, 4418.

ROBERTS, FIELD-MARSHAL THE RIGHT HON. EARL, V.C., K.G., K.P., G.C.B., O.M., G.C.S.I., G.C.I.E., Commander-in-Chief (See Questions 10,182-10,856; and 13,126-13,380.)

Ammunition, supply of, 10,501.

Arms:

Cavalry and Mounted Infantry, 10,409, 13,247,

13,250, 13,281, 13,293, 13,341.

Sighting of rifles, 10,575.

Army Organisation:

Army Corps:

Composition of, and utility of, 10,562,

10,661, 10,723.

Number of under scheme of 1901, 13,264,

13,269, 13,365.

Before the war, system of organisation, 10,243,

10,828.

Cavalry, arms and use of, 10,409, 13,247,

13,250, 13,281.

Certificate, annual, by Commander-in-Chief, as to equipment and fitness for war of the Army, view as to this proposal, 10,821.

Compulsory service, views as to, 10,377, 10,403, 10,661.

Efficiency and numbers of the Army, 10,286,

10,382, 10,661.

Expeditionary forces, 10,662.

Linked battalions, system of, 10,292, 10,661,

10,667, 10,688.

Mounted infantry, arms and use of, 10,375,

13,250, 13,282, 13,293, 13,341.

Organisation of the general staff and changes in position of Adjutant-General's Department and Quartermaster-General's Department, 10,447, 10,532, 10,738.

Reforms, general suggestions as to, 10,661, 13,209, 13,247.

Reserve, 10,247, 10,248, 10,336, 10,395, 10,661,

13,272.

Strength of force in South Africa at present time, 13,364, 13,369, 13,579.

Army Service Corps, satisfactory working of, 13,131.

Roberts, The Right Hon. Earl—continued.

Artillery:

Classes of guns, 10,564, 10,578, 10,609.

Responsibility for, 10,606.

Tactics, 10,565, 13,248.

Want of mobile heavy artillery, 10,183.

Auxiliary forces:

Difficulties arising during the war from insufficient training, 13,146.

Officers, 10,253, 10,298, 10,361, 13,239, 13,282.

(See also Militia and Volunteers.)

Boers:

Artillery, 10,595.

Interception of messages by, 13,361.

Knowledge of ground, and skill in taking cover and resourcefulness, 10,442.

Shooting, skill in, 10,426.

Under-estimate of their strength and resources, 10,243.

Botha, General Chris., peace negotiations with, 13,127 (page 54).

Botha, General Louis, peace negotiations with, 13,127 (page 57), and appendix to day's evidence.

Bridges, reconstruction, 13,350.

Cavalry. (See Army Organisation.)

City Imperial Volunteers, 10,312, 10,412, 13,288.

Artillery, 10,611.

Colonial Contingents:

Officers, 10,253, 10,266, 10,298, 10,361, 10,415.

Quality and suggestion as to training, 10,234,

10,260, 10,343, 10,367, 10,374, 13,252, 13,357.

Commander-in-Chief. (See War Office Organisation.)

Defence Committee of the Cabinet, 13,210, 13,223,

13,226, 13,267.

Equipment, accoutrements, boots and clothing, 10,501.

Expenditure on the Army, present amount, and views as to possible increase or reduction, 13,217.

Imperial Yeomanry in South Africa:

Quality, 10,260, 10,373.

Second contingent, 10,310.

India, drawing of troops from, 10,669, 10,673.

Intelligence Department:

Duties of, 10,456.

Information supplied by during the war, 13,308, 13,320.

Staff, 10,558.

Ladysmith:

Objections to as a base, 10,199, 10,204, 10,229.

Selection of, 10,183, 10,190, 10,204.

Supplies in, 10,209.

White, Sir George, decision as to staying in, question as to, 10,201, 10,853.

Manœuvring Areas, difficulties of procuring in England, and views as to suggestions for provision in the Colonies, 13,302.

Manual of Field Service, preparation of, 13,311.

Maps:

Jeppe's maps, 10,617, 10,657.

Steps taken in 1900 to construct maps of Cape Colony, Free State, and Transvaal, 10,615, 10,657.

Want of suitable maps of South Africa, 10,183, 10,615.

Medical Service:

General observations as to, 10,485, 10,537, 13,255, 13,284.

Kroonstadt, arrangements at, 13,127 (page 51), 13,167.

Sanitary Officer, appointment advocated, 13,171.

Men, quality, training, and supply of:

Drill Books, modification of, as result of the experiences of the war, 13,209.

Education, 10,329.

Employment in civilian duties, effect of on training, 10,331.

Endurance, 10,264.

Entrenching and cover, 10,442.

Horsemanship and horsemastership, 10,440, 10,442.

Individuality and intelligence in action, 10,442, 13,144, 13,247.

Roberts, The Right Hon. Earl—continued.

Men, quality, training, and supply of—continued.

Marching, 10,437, 10,442, 10,544.

Period of training, 13,160, 13,287.

Reservists, drilling, 10,336, 10,395.

Scouting, 10,422.

Shooting, 10,426, 10,442, 13,282.

Supply of:

During the war, 10,234.

Inducements to enlist, 10,317, 10,359.

Military Operations:

Buller, Sir R., operations by, 10,846, 13,127 (page 53), 13,186.

Strength of force, 13,183.

Disposition of forces in South Africa before outbreak of war, 10,183.

Orange River bridges and Laing's Nek tunnel, non-destruction of, 10,835.

Paardeberg, operation at, 13,128, 13,357.

Statement by witness as to his operations in South Africa, 10,843, and continued at 13,126.

Western route to Bloemfontein, choice of, reasons for, 10,849.

White, Sir George, operations by, 10,183, 10,185.

Militia:

Ballot Act, questions as to enforcement of, 10,694, 10,729.

Foreign service, question of making liable for, 10,661.

Officers, 10,253, 10,390.

Training, 10,693.

Use of, in South Africa, 10,369.

Mobilisation by divisions, question as to, 10,725.

Mounted Infantry. (See Army Organisation.)

Officers:

Auxiliary and Colonial forces, 10,253, 10,298, 10,361, 13,239, 13,282.

Increase in number of, need of, and question as to methods of meeting this need, 10,277, 10,283, 10,306, 10,314, 10,362, 10,384, 10,422, 10,538, 10,661.

Quality of, and suggestions as to training, 10,446, 10,447, 10,474.

Initiative, 10,333, 10,523, 10,554, 13,144, 13,247.

Military Colleges, training at, 13,360.

Specialising, question as to, 13,205.

Staff officers, quality, training, and appointment of, 10,447, 10,457, 13,163, 13,191, 13,280, 13,296, 13,336.

Pay, adequacy of, 10,317.

Post Office and telegraph services, 13,175.

Preparations for the war:

Force in South Africa before the war, 10,183.

Main defects in preparations, 10,183.

Schemes for defence of Natal made before the war, 10,187.

Schemes of operations existing before the war, and questions as to instructions to Sir G. White, 10,187, 10,213, 10,222.

Proclamations by witness in South Africa, 10,843 (page 465), 13,127 (page 55), 13,206.

Railway bridges, re-construction of, 13,350.

Reserve. (See Army Organisation.)

Secretary of State for War. (See War Office Organisation.)

Surrenders, 10,630.

Transport (Land):

Absence of organised department at commencement of the war, 10,183.

Railways, 10,506.

Re-organisation of transport system in 1900, 10,506.

Transport (Sea), 10,502.

Troops in South Africa at present time, strength of, 13,364, 13,369, 13,379.

Volunteers:

City Imperial Volunteers. (See that title.)

Efficiency of force, 10,692, 10,720.

Service Companies, 10,366, 13,243.

Training, annual, 10,342.

Roberts, The Right Hon. Earl—continued.

War Office organisation:

Adjutant-General, position of, 13,317.

Army Board:

Functions during the war, and subsequently, 10,764.

Suggested functions, 10,781, 10,796.

Changes in 1895 and 1901, 10,550.

Commander-in-Chief, position of, 10,737, 10,781, 10,787, 10,815, 13,233, 13,236, 13,317, 13,330.

Certificate, annual, as to equipment and fitness for war of the Army, views as to this proposal, 10,821.

Intelligence Department, duties and staff of, 10,456, 10,558.

Intelligence and Mobilisation Division, position of, 13,317.

Quartermaster-General's Department, position of, 10,449, 10,737, 10,753, 13,317, 13,323.

Secretary of State for War, position of, 10,737, 10,783, 10,811, 13,230, 13,233, 13,236.

Suggestions as to reform, 10,737, 10,807, 13,229.

War Office Council, functions and procedure, 10,768, 10,799, 13,233.

Yeomanry, Home, 10,400.

ROBERTSON, LIEUTENANT-COLONEL W. R., D.S.O. (See Questions 690-720.)

Assistant Quartermaster-General, Intelligence Division. Service of witness at home and in South Africa, 690.

Boer military strength and armament, collection of information as to, 700.

Field Intelligence Department, 703.

Maps, 712.

War Office organisation, staff of sub-division of Intelligence Division dealing with collection and collation of information as to foreign countries, 695.

RUNDLE, MAJOR-GENERAL SIR H. M. L., K.C.B., K.C.M.G., D.S.O. (See Questions 17,852-17,944.) Services of witness in South Africa, 17,852.

Artillery:

Ammunition, quality of, 17,917.

Equipment, 17,933.

Horse Artillery, supersession by heavy field artillery, suggestion as to, 17,932, 17,935.

Quality, range, and effectiveness of guns, 17,925, 17,928, 17,930, 17,935.

Tactics, 17,927.

Boers:

Artillery, 17,930.

Entrenching, 17,899.

Shooting, 17,879.

Colonial Troops serving under witness in South Africa, 17,858.

Quality of, 17,861.

Discipline, 17,862.

Horsemanship and horsemastership, 17,880, 17,886.

Entrenching Tools:

Carrying on carts advocated, 17,904.

Wallace spade, 17,903.

Equipment, 17,918.

Horses, quality and supply of, 17,922.

Imperial Yeomanry serving under witness in South Africa, 17,857.

Quality of, 17,863.

Infantry Tactics, 17,927.

Medical Services, 17,924.

Men:

Quality:

Entrenching and cover, 17,887, 17,938.

Memorandum by witness of June 13th, 1900, as to entrenchments, 17,888.

Esprit de corps and the territorial system, 17,874, 17,877.

Guards Battalions, 17,874.

Horsemanship and horsemastership, 17,883.

Marching, 17,881.

Shooting, 17,879.

Rundle, Major-General Sir H. M. L.—continued.

Men—continued.

Training, suggestions as to.

Cooking, 17,909.

Entrenching, 17,896.

Small bodies, training in, advocated, 17,939.

Medical Services, adequacy of, 16,635.

Men:

Class from which recruited, 16,662.

Qualities shown during the war, 16,635.

Intelligence and initiative, 16,635, 16,660.

Physique and morale, 16,365.

Shooting, marching, entrenching and cover, 16,635.

Training, suggestions as to, 16,660, 16,667.

Military situation in Natal and Cape Colony on arrival of Sir Redvers Buller in South Africa, 16,635.

Mobilisation:

Expenditure in connection with, date of authorisation, 943, 966, 983, 1007, 1031, 1040, 1044, 1054.

Scheme for, 935, 962, 979, 999, 1056.

Steps taken to mobilise for the war in South Africa, 943, 1019, 1034.

Working of mobilisation in practice, 951, 965, 1041, 16,629.

Mounted Infantry:

Organisation of, 16,731.

Training, 16,635.

Officer responsible for, at Aldershot, 16,733.

Value of, in future campaigns, 16,635, 16,703.

Officers:

Promotion of young officers, 16,723.

Qualities shown during the war by, and suggestions for increased training in initiative, 16,635, 16,681, 16,715.

Staff officers:

Qualities and training, 16,635, 16,684.

Reservists:

Calling up of Reservists on outbreak of war, 957, 965, 970.

Period for which Reservist would probably retain his discipline, military habits, etc., 16,754.

Proportion allotted to each regiment, 970, 16,638, 16,666.

Qualities shown by, during the war, 16,635, 16,637, 16,640.

Rifles, quality of, 16,635.

Supplies, adequacy and sufficiency of, 16,635.

Transport (land), 942, 943, 957, 1013, 1025.

Transport (sea), 1021.

Troops in South Africa:

Strength of, inadequacy of, for military situation in South Africa, on arrival of Sir R. Buller, 16,635, 16,636.

War Office Organisation:

Mobilisation and Intelligence Department, 952, 966, 16,759.

THORNEYCROFT, COLONEL A. W., C.B., *Lately Commanding Thorneycroft's Mounted Infantry. (See Questions 12,374-12,607.)*
Deputy Assistant Adjutant-General at Pietermaritzburg in 1899, 12,374.

Equipment of Colonial Forces, suggestions as to:

Arms, 12,472, 12,538, 12,607.

Artillery, 12,586.

Clothing, 12,597.

Reserves of, 12,470, 12,522.

Tents, 12,599.

Horses, shoeing on board ship, 12,429.

Imperial Light Horse, raising and organisation of, 12,379.

Intelligence Department for Colonial Forces in the field, suggestion as to, 12,496.

Manual for use in future organisation of Colonial Corps, views as to compilation of, 12,567.

Maps of South Africa, 12,507.

Officers of Colonial Corps, suggestions as to:

Regimental mess, 12,516.

Selection of, 12,401, 12,412.

Paymaster for Colonial Corps, appointment advocated, 12,461, 12,548.

Signallers and Signalling Equipment, 12,504.

Telescopes and Zeiss glasses, importance of, 12,446.

Thorneycroft's Horse, raising and organisation of, 12,377.

Age standards, 12,520.

Casualties, 12,544.

Dates of authority for enlistment, and of going to the front, 12,395, 12,416.

Discharge of men, terms of enlistment as to, 12,518.

Discipline, 12,455.

Equipment, 12,414, 12,567.

Arms, 12,430, 12,487, 12,492.

Artillery, 12,584.

Boots, 12,595.

Horses, 12,420, 12,426, 12,579.

Intelligence Corps in the field, 12,496.

Natives, use of, for purposes of Intelligence, 12,604.

"Manual for Field Service for Mounted Infantry," use of, 12,567.

Medical Establishment:

Ambulance wagons, 12,503.

Efficiency of, 12,502.

Recognition of Geneva Cross by Boers, 12,530.

Stretcher bearers, 12,527.

Medical tests, 12,454.

Non-commissioned officers, 12,407.

Officers, selection, 12,401.

Pay, 12,387, 12,410, 12,461.

Quality of men:

Cover, taking, 12,441.

Discipline, 12,455.

Education, standard of, 12,559.

Entrenching, 12,444.

Esprit de corps, and conduct in face of the enemy, 12,563.

Horsemastership, 12,420, 12,422.

Intelligence and initiative, 12,457, 12,559.

Comparison with over-sea Colonial Corps as to intelligence, 12,574.

Physique, 12,453.

Scouting and reconnoitring, 12,444.

Shooting, 12,434.

Boers, comparison as to, 12,435.

Tracking, 12,449.

Shooting tests, 12,434.

Strength of force, 12,584.

Training of men, 12,414, 12,420, 12,435.

Transport, 12,532.

Training of Colonial Forces, as to riding and shooting, views as to, 12,435, 12,468.

TREVES, SIR FREDERICK, Bart., K.C.V.O., C.B. (*See Questions 11,966-12,204.*)

Services of witness in South Africa, 11,966.

Treves, Sir Frederick—continued.

Equipment:

Advance Medial Depôts, suggestion as to, 12,013, 12,139.

Disinfectants, 12,155, 12,171.

Drugs, 12,004, 12,149.

Elimination of unsuitable equipment advocated, 11,998, 12,135.

Instruments, 12,145, 12,154, 12,162, 12,170, 12,181.

Supply of, general observations as to, 12,145.

Food Supplies, control of, change advocated, 11,986.

Foreign Powers, Army Medical Services, 13,115, 12,172, 12,186.

Hospitals:

Military:

Base hospitals, management on civil lines advocated, 12,118.

Civil population, treating in, views as to, 12,115.

Defects in English military hospitals, and suggestions for improvements, 12,111, 12,168, 12,173, 12,201.

New Military Hospital and Staff College, 12,156.

Naval hospitals not inspected by Advisory Medical Board, 12,183.

Mobile Field Hospital, suggestion as to, 12,035, 12,106.

Organisation of Army Medical Service in the field, decentralisation advocated, 11,971.

Personnel:

Bearer companies, 12,023, 12,091, 12,101.

Nurses, 12,086.

Officers:

Administrative duties in the field, excess of, 11,977, 11,992, 12,121.

Collecting stations, duties at, 12,022.

Training and opportunities for practice, 12,115, 12,125, 12,156, 12,162, 12,172, 12,192.

Sanitary Officer, appointment of, views as to, 12,144.

Transport for Medical Purposes:

Ambulance wagons, 12,044, 12,094.

Defects in, and suggestions for improvements, 12,035, 12,044.

Dhoolies, use of in South Africa, 12,097.

War Office Organisation:

Advisory Medical Board:

Constitution, procedure, etc., 12,060.

Place of meeting, 12,160.

TROTTER, COLONEL J. K., C.B., C.M.G., *Assistant Quartermaster-General, Intelligence Division. (See Questions 13,636, 13,828-13,838.)*

Bridges, non-destruction of, 13,829.

Kimberley, defence of, 13,837.

TRUMAN, MAJOR-GENERAL W. R., *Inspector-General of Remounts from January, 1899. (See Questions 12,825-12,907.)*

Committees on Remounts, 12,826.

Horses:

Estimate of number required in time of war, 12,855, 12,867, 12,894.

Foreign sources of supply, information as to, 12,873.

Purchase of, by Remount Department, 12,899, 12,904.

Argentinians, 12,880, 12,885, 12,889, 12,895.

Australian, 12,899, 12,904.

Canadian, 12,879.

Excess of purchase over demands, 12,846.

Normal purchases in time of peace, 12,856, 12,875.

Order for reduction or cessation of purchases followed by increased demand, 12,831.

Prices paid, 12,889, 12,904.

Qualities of horses of South America, Texas, and southern portion of United States, 12,880.

Wastage in the German Army in 1870, 12,892.

War Office Organisation:

Remount Department, 12,827, 12,849.

Office accommodation, 12,828, 12,864.

Staff, number of, 12,849, 12,858.

Cavalry Columns, medical transport for accompanying, absence of, 12,055.

Civil Surgeons serving during the war, 12,080.

Collecting and Dressing Stations, 12,016.

TULLIBARDINE, MAJOR THE MARQUIS OF, C.V.O.,
s.s.o., Royal Horse Guards, late Lieut.-
 Colonel Commanding Scottish Horse. (See
 Questions 20,274-20,415.)

Services of witness in South Africa, 20,274,

Auxiliary Forces, suggestions for future organisa-
 tion and equipment of, 20,281 (page 452).

Arms, 20,281 (page 452), 20,370.

Australians, arming with swords advocated,
 20,281 (pages 453, 454), 20,372.

Rifles, method of carrying, 20,281 (page
 453), 20,381.

Artillery, 20,281 (page 453), 20,386.

Discipline, power of dismissal and other punish-
 ments, 20,355.

Equipment, 20,281 (page 452), 20,381.

Arms, *see that sub-heading*.

Great coats, method of carrying, 20,281
 (page 453), 20,385.

Farriers and signallers, provision, 20,281 (page
 452), 20,369.

Horses, provision, 20,281 (pages 450, 454),
 20,348.

Non-commissioned officers, 20,281 (page 452),
 20,351.

Officers, provision, 20,281 (pages 452, 454),
 20,349.

Pay:

Rates of pay on service, uniformity advo-
 cated, 20,281 (page 454).

Regimental Paymaster, appointment advo-
 cated, 20,281 (page 454), 20,331.

Rations, 20,281 (page 454).

Recruiting, class of men, etc., 20,281 (page
 454), 20,359.

Terms of enlistment, period of service, etc.,
 20,281 (page 454).

Training:

Riding, shooting, and scouting, 20,281
 (page 454).

Signalling, 20,281 (page 452).

Transport, 20,281 (page 453), 20,324, 20,391.

Motor cars for, question as to, 20,395.

Veterinary officers, 20,281 (page 452).

Water-carts, fitted with stove for boiling water
 on the march, suggestion as to, 20,281 (page
 453), 20,391.

Cavalry, arms for, 20,281 (page 453).

Imperial Yeomanry, 2nd Contingent, quality of,
 20,281 (page 454).

Scottish Horse for service in South Africa, raising
 and organisation of, 20,276.

Artillery, 20,386.

Australians, 20,281 (page 447).

Age standards, 20,299.

Arming with lances, 20,372.

Government of New South Wales and
 Queensland, attitude of, 20,315.

Officers, quality of, 20,281 (pages 450, 451,
 452).

Pay, 20,281 (pages 447, 448), 20,315.

Quality as to shooting, scouting, horsemanship
 and horsemastership, 20,281 (page
 451), 20,293, 20,300, 20,303, 20,363.

Scots, employment as, 20,281 (page 451).

Book of Headquarters Orders, 20,281 (page
 449).

Canadians, arrangements for recruiting not car-
 ried out, 20,281 (page 447), 20,305, 20,412.

Classes from which recruited, 20,281 (pages
 446, 447, 451).

Discipline, punishments, power of dismissal in
 the field, 20,281 (pages 450, 451), 20,283,
 20,235, 20,360.

Equipment, 20,281 (pages 452, 453), 20,369,
 20,395.

Accounts for clothing, none in Scottish
 Horse, 20,334.

Supply of necessaries, advance depôts for,
 20,336.

Headquarters office and depôt at Johannesburg,
 20,281 (page 448).

Horses:

Provision, 20,281 (pages 448, 450), 20,339.

Quality of, and wastage in South Africa,
 20,281 (page 450), 20,341.

Tullibardine, Major the Marquis of—continued.

Scottish Horse for Service in South Africa—
 continued.

Hospitals:

Johannesburg, hospital and convalescent
 camp at, 20,281 (page 448).

Thieving in, 20,281 (page 452), 20,365.

Natives, employment of, 20,281 (pages 451,
 456).

New Zealanders, 20,309.

Non-commissioned officers and men, numbers
 and casualties, summary of, 20,281 (page
 455).

Officers, 20,281 (pages 448, 450, 451), 20,322:

Colonial officers, 20,281 (pages 450, 451,
 452, 454).

Numbers and casualties, summary of,
 20,281 (page 455).

Pay, 20,281 (page 448).

Quality of, 20,281 (page 451), 20,349,
 20,362.

Pay:

Allotments, difficulties as to, 20,281 (page
 449), 20,335.

Army Pay Department, difficulties with,
 20,281 (page 449), 20,331.

Demobilisation, arrangements as to pay
 on, 20,281 (page 449), 20,338.

Rates of, 20,281 (pages 447, 448), 20,310,
 20,330.

Regimental Paymaster, provision, 20,281
 (page 448), 20,331.

Quality of men:

Esprit de corps, 20,281 (page 451).

Letter from Colonel Benson as to, 20,281
 (page 456).

Shooting, scouting, horsemanship, and
 horsemastership, 20,281 (pages 451, 454),

- Telegrams, 1544.

Ward, Colonel Sir E. W. D.—continued.

Ladysmith :

- Accumulation of stores at, 5713, 5936.
- Ammunition stores, 5757.
- Food supplies at commencement of siege, 5723, 5933.
- Medical supplies, 5746.
- Proceedings with regard to supplies during the siege, and date which they would last, 5737, 5869, 5909, 5972.
- Water supply, 5751.
- Withdrawal of stores, possibility of, question as to, 5732.
- Ordnance stores, distribution in the field, 5843.
- Pay, methods of, in the field, 5847.
- Financial control and audit of accounts in the field, suggestion as to, 5847, 5875, 5903, 5923.

Railways :

- Organisation of railway service in the field, suggestions as to, 5833, 5976.
- Railway rates in Natal, 5951.

Supplies :

- Bloemfontein, supplies at, in March 1900; 5778, 5786.
- March to Pretoria, supplies on, 5789, 5918.
- Meat supply, 5808.
- Medical supplies, 5786.
- Natal, supplies in :
 - In October 1899, 5697, 5960.
 - Relief of Ladysmith, supplies after, 5772.
 - (See also sub-heading "Ladysmith.")
- Pretoria, supplies at, 5797, 5921.
- Prices, fixing of, 5828.
- Quality of supplies, 5802, 5895.
- Transport of, on march, 5790.
- Transport, reorganisation under Lord Roberts, 5856.

War Office Organisation :

- Advisory Boards, 1495.
- Army Board, 1475.
- Changes effected under the Order in Council of 1901, 1436.
- Commander-in-Chief, position of, 1436.
- Dawkins' Committee, steps taken to carry out recommendations of, 1503.
- Decentralisation of work, 1500.
- Permanent Executive Committee, 1488.
- War Office Council, 1465, 1530.

WARREN, LIEUTENANT-GENERAL SIR CHARLES, G.C.M.G., K.C.B. (See Questions 15,652-15,964.)

Services of witness in South Africa, 15,652.

Army Organisation :

- Battalions, batteries, etc., on foreign service to remain there permanently, suggestions as to, 15,852, 15,921.
- Cavalry, *see that sub-heading*.
- Defective organisation, effect of on campaign in South Africa, 15, 60, 15,662, 15,852, 15,932.
- Engineers, *see that sub-heading*.
- Regulations for Home, India, and the Colonies, uniform basis, suggestions as to, 15,740, 15,742, 15,852.
- Suggestions for general reform, 15,852.

Artillery :

- Range of guns, tactics, etc., 15,850.
- Auxiliary Forces, qualities shown during the war by, 15,697, 15,702, 15,723.

Boers :

- Artillery, use of, 15,660.
- Mobility, 15,660.
- Shooting, quality as to, 15,660, 15,698.
- Canadian Forces, quality of, 15,702, 15,731.

Cavalry :

- Arms, 15,660, 15,850.
- Qualities shown during the war by, 15,660, 15,667, 15,695, 15,697.

Engineers :

- Officers, position as to general staff, 15,813, 15,837.
- Qualities shown by Field Engineers, and suggestions as to training, 15,813.
- Sanitation, joint responsibility of Medical Officers and Engineers advocated, 15,513, 15,820, 15,828.

Warren, Lieutenant-General Sir C.—continued.

Equipment, 15,771, 15,789.

Horses, qualities of, and wastage during the war, 15,771, 15,778.

India, routes suggested for troops going to and from :

Canadian route, 15,949.

South African route, 15,852, 15,893.

Medical Services :

Officers :

Qualities shown during war by 15,813.

Relations of Medical Officers with General Officers, views of witness as to, 15,845.

Sanitation :

Appointment of Sanitary Committee, and making liable of Medical Officer and Engineer Officer advocated, 15,814, 15,842.

Training of combatant officers in sanitation advocated, 15,848.

Men :

Education, 15,852, 15,853.

Foreign service, period of, 15,852, 15,923.

Living under canvas, suggestion as to, 15,852.

Qualities shown during the war, 15,660, 15,663, 15,693, 15,697.

Discipline, 15,852, 15,934.

Entrenching and cover, 15,697, 15,724.

Horsemanship and horsemanship, 15,697.

Intelligence, 15,697.

Marching, 15,697, 15,720.

Physique, morale, and endurance, 15,697, 15,726.

Reconnaissance, 15,852.

Shooting, 15,663, 15,697, 15,698.

Training, suggestions as to, 15,663, 15,699, 15,711, 15,852.

Drill Book, defects in before the war, as to attack and advance, 15,660, 15,687.

Gymnastic training, advantages of, 15,852, 15,936.

Lessons of the war, applicable to European warfare, 15,688.

Military Operations :

Advance, line of, questions as to, 15,660, 15,671.

Cape Colony, defence of, scheme proposed by witness in December 1899, 15,660, 15,673.

Natal :

Artillery for Ladysmith Relief Force, 15,692.

Ladysmith :

Selection of, 15,660, 15,680.

Troops, number of, inadequate for efficient defence, 15,660, 15,677.

Spion Kop, operations terminating in battle of, 15,656.

Troops, strength of :

Number required for operations in Natal, estimate of, 15,660, 15,690.

Number which would have been necessary to protect Colony from invasion in 1899, 15,668.

Officers :

Arms and dress of, suggestions as to, 15,683.

Captains of companies, increased authority advocated, 15,740, 15,746, 15,757, 15,852.

Command in the field, territorial as well as personal, 15,852.

Confidential reports, regulations as to, 15,852, 15,861, 15,943.

Feeling between officers and men, 15,858.

Foreign service, period of, 15,852, 15,921.

Letters, opening by Censor, on active service, 15,852, 15,864.

Lieutenants-General, duties of, definition advocated, 15,852.

Promotion, 15,740, 15,748, 15,765, 15,852, 15,854, 15,859, 15,940.

Qualities shown during the war, 15,660, 15,724.

Staff officers, duties of, 15,740.

Training, suggestions as to, 15,663, 15,740, 15,757, 15,779, 15,848, 15,852, 15,937.

Railways, repair of, control of, 15,799, 15,811.

Rifles, quality of, 15,850.

Warren, Lieut.-General Sir C.—continued.

Supplies, 15,771.

Tinned meat, 15,771, 15,773, 15,786.

Transport, land, 15,799.

Contracts for wagons and oxen, 15,799, 15,801.

Regimental and general transport compared, 15,808.

Troops in South Africa:

Qualities shown by Regular Forces, *see sub-heading* Men.

Strength of, views of witness as to adequacy, 15,660, 15,668, 15,671, 15,677, 15,690.

WHITE, GENERAL SIR GEORGE, V.C., G.C.B., G.C.S.I., G.C.M.G., G.C.I.E., G.C.V.O., General Officer Commanding Natal; Governor and Commander-in-Chief, Gibraltar. (*See Questions* 14,688-14,962.)

Command of forces in Natal, 14,705.

Quartermaster-General previously to 16th September 1899, 14,688.

Artillery, *see sub-heading* Military operations in Natal—Siege of Ladysmith.

Boers:

Artillery, use of, 14,820, 14,838 (page 156).

Numbers in the field, mobility, etc., 14,707 (pages 145, 146, 148), 14,747, 14,838 (pages 155, 156), 14,896 (pages 163, 164), 14,897, 14,920.

Cavalry, retention of, *see* Military Operations in Natal—Siege of Ladysmith, Troops.

Colonial Forces:

Mounted troops, decision as to in early stages of the war, 14,955.

South African Corps, raising, organisation and pay of, 14,844.

Interviews with Officials, 14,707 (page 144), 14,720, 14,938, 14,951.

Military Operations in Natal:

Previously to investment of Ladysmith:

Distribution and strength of troops when witness took command in Natal, 14,707 (page 144).

Dundee and Glencoe, occupation of, and withdrawal from, 14,707 (pages 144, 145, 146, 147), 14,716, 14,724, 14,726, 14,838 (pages 154, 155), 14,864.

Talana Hill, action at, considerations as to, and questions whether it should have been fought in superior force, 14,707 (pages 144, 145, 146), 14,737, 14,743.

Elandslaagte, action at, 14,707 (page 145), 14,838 (page 155).

Rietfontein, action at, 14,707 (page 147).

Colenso Bridge, defence of, 14,707 (page 146), 14,804, 14,838 (page 156).

Lombard's Kop, action on 30th October, 14,707 (pages 147, 148), 14,828.

Nicholson's Nek, loss of troops at, 14,707 (pages 147, 148).

Fortification of Ladysmith and general scheme of defence, 14,707 (pages 147, 148), 14,794.

Telegrams during October, 1899, between witness, the Secretary of State, and others, 14,838-14,866.

Railways, non-destruction of, 14,755, 14,760.

Siege of Ladysmith

Artillery, 14,824, 14,838 (pages 155, 156).

Naval guns, 14,707 (page 148), 14,814, 14,824, 14,838 (page 154), 14,930.

Effect of successful defence, 14,707 (page 148).

Reasons for defending, 14,707 (page 146).

Views of witness as to practicability of withdrawing south of the Tugela, 14,767.

Relief operations by Sir Redvers Buller, and messages that passed between him and Sir George White during the siege, 14,865 (page 157) to 14,926.

White, General Sir George—continued.

Military Operations in Natal—continued.

Siege of Ladysmith—continued.

Relief Operations, &c.—continued.

Colenso, battle of, 14,874 (page 159), 14,880, 14,881, 14,888, 14,896 (pages 160, 161).

Heliogram from Sir R. Buller on 16th December, 14,881 (page 161), 14,893.

Preparations by witness to co-operate at this date, 14,881 (page 160), 14,889.

Spion Kop, battle of, 14,896 (pages 164, 165), 14,896*.

Sorties during the siege and attacks on enemy's guns, 14,838 (pages 156, 159), 14,872.

Wagon Hill and Caesar's Camp, attack on, 14,896 (page 162).

Preparations by witness for pursuit of Boers after the relief, 14,901.

Supplies during the siege and period they would last, heliograms as to, 14,838 (page 156), 14,866 (page 158), 14,884, 14,896 (pages 163, 164, 165, 166).

Troops in Ladysmith:

Cavalry, retention of, 14,797, 14,838 (page 156).

Morale after action at Lombard's Kop, 14,832.

Quality of men, 14,956.

Rifle Brigade, withdrawal of, proposal as to, 14,838 (page 154), 14,863.

Milner, Sir A., interview of witness with, 14,707 (page 144).

Mounted Troops, importance of, under conditions of South African war, 14,707 (page 148).

Officers, Staff, selection of, by witness, 14,927.

Preparations for the War:

Defence schemes for Natal, previously to the war, 14,713, 14,945.

Expenditure, sanction of, 14,692, 14,699, 14,782.

Interviews between witness and officials, 14,707 (page 144), 14,720, 14,938, 14,951.

Quartermaster-General's Branch, witness responsible for, previously to September 1899, 14,689.

Transport (land), 14,699, 14,707 (page 145), 14,770.

Troops in South Africa:

Distribution and strength of troops when witness took command in Natal, 14,707 (pages 144, 145).

Mounted troops, importance of, under conditions of South African war, 14,707 (page 148).

Superiority in numbers required by military situation in South Africa, 14,707 (pages 146, 148).

Thorneycroft's and Imperial Light Horse, 14,852.

(*See also* Military Operations in Natal—Siege of Ladysmith.)

War Office Organisation:

Army Board:

Discussion as to preparations for the war, 14,692.

Future use of, suggestions as to, 14,933.

Commander-in-Chief, position of, 14,937, 14,942.

Intelligence and Mobilisation Department, position of, 14,938.

WILSON, LIEUT.-COLONEL E. M., C.B., C.M.G., D.S.O., R.A.M.C. (*See Questions* 11,265-11,471).

Deputy-Assistant Director-General Army Medical Department, 11,266.

Establishment, basis of, 11,270, 11,316.

Foreign Powers, Army medical organisation, witness no official knowledge of, 11,466.

Hospitals, military, treating of civil population, advocated, 11,429.

Wilson, Lieut.-Colonel E. M.—continued.

Personal, medical :

At different stages of the war, 11,294, 11,392, 11,449, 11,452.
Before the war, 11,270, 11,447.
Increase of, 11,306, 11,394.
Nurses, female, 11,295, 11,404.
Officers, 11,295, 11,433.

Orderlies :

Quality, 11,391, 11,332, 11,386, 11,423, 11,440, 11,442, 11,463.
Reserve of, 11,271, 11,304, 11,450.
Supply of, 11,276, 11,294, 11,304, 11,392, 11,452.
Number of men required for two Army Corps, estimate of, 11,279.
Training and duties, 11,324, 11,329, 11,415, 11,444.
Period of training, 11,338.
Strength of personnel, percentage requisite, estimates of, 11,279.
Preparations for the war, as to increase of personnel, etc., 11,306.
Volunteer and local aid, 11,295, 11,299, 11,312, 11,321.

WILSON, SIR GUY FLEETWOOD, C.B. (See Questions 5982-6295.)

Assistant Under-Secretary of State for War, 5982.

Services in South Africa as financial adviser to Lord Kitchener, 5983.

Reports made to Lord Kitchener, 5984.

Clothing :

Changes in position of Clothing Department, 6276.
Supply of, for troops in South Africa, 6278, 6287.
Commandeering, claims in respect of, 5987, 6129, 6200.

Contracts :

Director of Contracts, change in position of, suggested, 6227.
Operation of the peace system under war conditions, 6019, 6184, 6219.
Power of making contracts in peace, suggested transfer to the Military Authority, subject to civil audit, 6020, 6220, 6230, 6260.
Transport in South Africa, contracts for, 6289.

Expenditure :

Control of expenditure in the field, 6009, 6016, 6134, 6155.
Demands for and sanction of military expenditure, considerations with regard to, 6103, 6240.
Financial advisers to Army Corps, 6266.
Appointment of Chief Financial Adviser and Staff in the field, suggested, 6041, 6215.
Supply accounting, 6000, 6191, 6203.
In case of ordnance supplies, 6006.
Intelligence Department, reports by, 6112.
Pay system, 5999, 6013.
Operations of the peace system under war conditions, 6039, 6158, 6163.
Preparations for the war in South Africa, 6112.

Railways :

Arrangements with Cape and Natal Railways, and reduction of rates, 5996, 6143, 6250.
Suggestions as to dealing with railways in the event of future campaigns, 5996, 6145.

War Office Organisation :

Army Board, 6065, 6067, 6069, 6102, 6222.
Army Clothing Department, changes in position of, 6276.
Clerks, military, substitution for civil, suggested, 6053, 6176, 6207.
Commander-in-Chief, position of, 6082.
Commander-in-Chief's Committee in 1899, 6067.
Executive Committee of War Office, 6068.
Mobilisation Committee in 1899, 6067.
War Office Council, 6069, 6090.

WILSON, SURGEON-GENERAL SIR WILLIAM, M.B., R.C.M.G. (See Questions 3589-3899.)

Principal Medical Officer in South Africa, 3589 ; when directed to go out, 3832.

Ambulance :

Boer ambulance, 3883.
Colonial, 3889.
St. John's, 3617.
Wagons, 3660, 3663, 3666.

Army Service Corps, food supplies for hospitals, 3630, 3677.

Civilian surgeons, *see sub-heading* Personnel.

Clothing, pyjamas, 3650, 3724, 3758.

Enteric, 3679, 3787, 3840.

Equipment, medical, 3605.

Beds, 3647, 3820, 3822.

Department responsible for, 3631, 3882.

Drugs, 3625, 3703, 3808, 3859.

Instruments, 3711.

Regulations as to supply, 3696, 3702.

Supply of, deficiency in, and steps taken to obtain further supplies, 3605, 3641, 3654.

Transport of, 3611, 3640, 3734, 3804.

Suggestions as to, 3697, 3751, 3879.

Establishment, general observations as to, 3600-3605, 3696, 3775.

Personnel Medical, 3593.

Bearer Companies, 3596, 3604, 3613, 3697.

Civilian Surgeons, 3615, 3623, 3685, 3710-3756, 3802.

Nurses, 3685.

Officers, Medical :

Quality of, 3616, 3623.

Supply of, 3595, 3683.

Training, 3865.

Orderlies :

Quality, training, and duties of, 3617, 3688-3691, 3768.

Supply of, 3595, 3693.

Sanitary officer, appointment of, views as to, 3618, 3727, 3893.

Strength of :

Before the war, 3776.

Numbers serving during the war, and numbers necessary for adequate supply, 3596, 3781, 3854.

Numbers required for three Army Corps, 3778.

Sanitation :

Board, sanitary, distinct suggested, 3618, 3737.

Camps, 3679.

Water, 3680, 3790, 3846, 3850.

Sick and wounded, percentage of, 3671.

Supplies, for hospitals, 3610, 3703, 3810.

Kimberley and Ladysmith, 3625.

Quality, 3633, 3810, 3859.

Transport for medical purposes, 3596.

Ambulance wagons, 3660, 3663, 3666, 3315.

Colonial troops, 3745, 3753, 3824, 3889.

Delay in, 3596, 3607, 3640.

Horses and drivers, provision of, 3827, 3879.

Hospital trains, 3668, 3762.

Open trucks, 3670, 3796.

Suggestions for improvement of, 3700, 3750-3879, 3887.

War Office Organisation, changes in position of the Medical Department, 3870.

WOLSELEY, FIELD-MARSHAL THE RT. HON. THE VISCOUNT, K.P., G.C.B., O.M., G.C.M.G. (See Questions 8695-9375.)

Commander-in-Chief, from 1895 to end of 1900-8696.

Ammunition :

Change from Mark IV. bullet, before the war, 9315.

Army Organisation :

Army Corps, scheme of 1888, 8945, 9197.

Army Corps, scheme of 1901, 9198.

Certificate, annual, by Commander-in-Chief as to adequate equipment, suggestion of, 8948, 9196, 9359.

Compulsory service for home defence, views as to, 9204.

Wolseley, Lord—continued.

Army Organisation—continued.

Expeditionary forces, organisation of, 9217, 9253.

Linked battalions, system of, 8735.

Mobility, necessity to increase, by mounted infantry, 9124.

Stores, reserves of, 8945.

Artillery:

Arrangements with manufacturers, 9281.

Boer purchases, 9263.

Classes of guns, 9268.

Purchases:

Abroad, during the war, 8709.

In England, during the war, 8812.

Boers, preparation by, for war, 8701.

City Imperial Volunteers, quality of, 9138.

Clothing, 8789.

Defence Committee of the Cabinet, 9032, 9058.

Documents:

Minutes by Lord Wolseley in June, 1888; 8703.

Reply by Mr. Stanhope, 8704.

Minute by Lord Wolseley of 14th February, 1896, 8714.

Minute by Lord Wolseley of 3rd November, 1897, 8728.

Minute by Lord Wolseley of 20th April, 1898, 8744.

Horses, scarcity of, at beginning of war, 8845.

Imperial Yeomanry, 9147.

India, despatch of troops from, in September, 1899; 8923.

Intelligence Department, information collected by, 8701.

Ladysmith:

Selection of, 8882, 9291.

Supplies in, 8902, 9303.

White, Sir George, decision to stay in, question as to, 8903, 9298, 9308.

Medical service, 9187.

Men:

Quality of, 9111.

Entrenchments and cover, quality as to, 9122.

Intelligence, 9113.

Recruiting, 9120.

Military operations:

Buller, Sir R., decision to operate in Natal instead of to advance on Bloemfontein, views of witness as to, 9099, 9369.

Glencoe, question as to holding, 8862.

Roberts', Lord, advance on Bloemfontein, views of witness as to route chosen, 9105.

Militia:

Quality of, 9135, 9318.

Training, 9321.

Value of, 9140, 9322.

Mobilisation:

1st Army Corps in 1899, and despatch of, to South Africa, 8801, 8830, 8862.

Method of mobilisation, 9255.

Officers:

Militia officers, 9135, 9318.

Quality of, 9111, 9178.

Staff officers, mode of selection, 9186.

Training, 9182.

Preparations for the war:

Army Corps, date at which despatch was contemplated, 8794.

Force in South Africa before the war, 8830.

Defence of colonies, adequacy for, question as to, 9227.

Proposals by Lord Wolseley in 1896 to strengthen force in South Africa, 8717.

Proposals for increase of strength of the Army, 8727.
